Space And Technology:

Space Technology Joseph A. Angelo, 2003-06-30 A reference guide to current developments in space technology that discusses the social political and technical impacts of those developments on everyday life both now and in the future

Space Technology & Planetary Astronomy Joseph N. Tatarewicz, 1990 the book reminds us of an important lesson in the postwar era of big science that government policy may lead initially to tremendous support for various fields of science and technology Science a triumph of historical analysis Choice This is an excellent record of the beginnings of the NASA planetary astronomy program in the years 1958-70 American Historical Review The historical circumstances that led to this country's great leap into space were unique but it is clear that there are many lessons to be learnt from this enthralling tale and Tatarewicz tells the tale well Annals of Science When NASA went looking for expertise on the moon and planets following Sputnik they found that astronomers had long since turned their telescopes away from our planets and toward the stars Where were the scientists who could help the United States explore the solar system The answer as this important new study shows was that NASA had to create them This story of the precipitous rise and decline of planetary astronomy is an important case study of science in an age of state managed research and development It demonstrates that the lines between science technology politics and society are anything but fixed and impermeable HDBK SPACE TECHNOLOGY STATUS

Single Stage to Orbit Andrew J. Butrica, 2003-10-22 While the glories and tragedies of the space shuttle make headlines and move the nation the story of the shuttle forms an inseparable part of a lesser known but no less important drama the search for a reusable single stage to orbit rocket Here an award winning student of space science Andrew J Butrica examines the long and tangled history of this ambitious concept from its first glimmerings in the 1920s when technicians dismissed it as unfeasible to its highly expensive heyday in the midst of the Cold War when conservative backed government programs struggled to produce an operational flight vehicle Butrica finds a blending of far sighted engineering and heavy handed politics To the first and

oldest idea that of the reusable rocket powered single stage to orbit vehicle planners who belonged to what President Eisenhower referred to as the military industrial complex added experimental X aircraft like capabilities and eventually a faster cheaper smaller managerial approach Single Stage to Orbit traces the interplay of technology corporate interest and politics a combination that well served the conservative space agenda and ultimately triumphed not in the realization of inexpensive reliable space transport but in a vision of space militarization and commercialization that would appear settled United States policy in the early twenty first century D M Ashford

Space Technologies for the Benefit of Human Society and Earth Phillip Olla,2009-03-18 Overview of Space Technology It has been over 50 years since the first satellite was sent into orbit and the impact of space technology can be felt in many aspects in our day to day life In addition to the convenience of knowing exactly where we are on the planet via GPS satellites or deciding what to pack for a trip based on forecasts from weather satellites watching CNN in a remote village via broadcasting satellites there are now some crucial environmental uses of Space technologies in the areas of natural resources management and environmental monitoring Remotely sensed data reveals an unparalleled view of the Earth for systems that require synoptic or periodic observations such as inventory control surveying agriculture business mineralogy hydrography geology land mass cover land utilization and environment monitoring The advancement of remote sensing has made remote sensed data more affordable and available to merge with a variety of data sources to create mash ups The amalgamation of these data sources into disciplines such as agriculture urban planning web applications cartography geodetic reference systems and global navigation satellite systems are an important advancement of space applications and space science Space Technology and Millennium Development Goals MDGs The MDGs are a set of time bound measurable goals and targets that are global as well as country specific for combating poverty hunger diseases illiteracy environmental degradation and discrimination against women

Advanced-To-Revolutionary Space Technology Options - The Responsibly Imaginable National Aeronautics and Space Administration (NASA),2018-05-22 Paper summarizes a spectrum of low TRL high risk technologies and systems approaches which could massively change the cost and safety of space exploration exploitation industrialization These technologies and approaches could be studied in a triage fashion the method of evaluation wherein several prospective solutions are investigated in parallel to address the innate risk of each with

resources concentrated on the more successful as more is learned Technology areas addressed include Fabrication Materials Energetics Communications Propulsion Radiation Protection ISRU and LEO access Overall and conceptually it should be possible with serious research to enable human space exploration beyond LEO both safe and affordable with a design process having sizable positive margins Revolutionary goals require generally revolutionary technologies By far Revolutionary Energetics is the most important has the most leverage of any advanced technology for space exploration applications
