Implications of Ultra-Low-Cost Access to Space Todd Harrison, Andrew Hunter, Kaitlyn Johnson, Thomas Roberts, 2017-04-03 Since the advent of the space age a primary constraint on military commercial and civil space missions has been the cost of launch Launching objects into space requires substantial investments in launch systems and infrastructure which has restricted the market to only a handful of national governments and several large private companies

Proceedings of a Conference Sponsored by NASA Goddard Space Flight Center at Goddard Space Flight Center ,1999 Outer Space Development, International Relations and Space Law Edythe Weeks,2013-02-21 It is the eve of outer space development but few people are aware of this In the absence of awareness people cannot prepare for the opportunities that will arise and so the vast wealth likely to flow to Earth from outer space will cause ever greater inequality and instability in our already unequal and unstable world This book is a call to educators to factor equality and diversity into the process of outer space development by creating a widespread movement to teach outer space development studies to all students especially those who study social and behavioral sciences In calling for this the author is also putting out a call to visionary thinkers to increase public awareness that outer space is already in the process of being developed Her objective is to provide a pedagogical approach aimed at mending the knowledge gap If we fail in this objective we are more likely than ever before to witness ever widening gaps of social and financial inequality The first question that will arise as we embark on this process of course will be Why outer space development People often ask where the money will come from to develop outer space Platinum group metals such as iridium and osmium and various other valuable untapped natural resources have been discovered in abundant quantities and are likely to be mined by companies The discovery of natural resources has sparked development projects in the past These historical patterns of human behavior are occurring again today as companies speed up the process of private spaceship development A myriad of space laws and policies are already in place to support space commercialization Recently the 2010 NASA Authorization Act and various other laws and policies initiated by the US government have placed on the agenda plans to build advanced space transportation systems to privatize spacecraft development to create commercial space habitats space stations and space settlements to initiate commercial space mining to investigate spacecraft trajectory optimization for landing on near Earth asteroids to engage in commercial spaceport construction and interstellar interplanetary international telecommunications and to launch space exploration missions to near Earth asteroids the Moon Mars and Mars s moons US initiatives have in the past been mirrored by the international community and we can expect to see similar patterns arising on a global scale indeed as this book will demonstrate they already are The global community is experiencing economic recession natural disasters lack of opportunity employment

anxiety failing K 12 programs widening inequality gaps uprisings revolutions revolts unmet educational goals and a general failure to uplift inspire and provide meaningful opportunities for significant portions of our population People need something that will allow them to focus anew their talents energies abilities and gifts and use this bleak climate as an opportunity for positive change Outer space development is emerging as an answer to this state of crisis The question is To whom will the benefits accrue Many strategic decisions have already been taken regarding space development of which the global general public is unaware Once legal rights to space resources are granted only those with the capital to take advantage of new laws and policies will be in a position to profit from the new space industries Only those who are in a position to know about outer space development will be in position to take advantage of the opportunities It is important to remember that the global general public has for several decades been paying the start up costs for space exploration research science and technology It s not too late to factor in equality before an infrastructure of inequality is forever with us as we venture to establish the final frontier

Improving Acquisition to Support the Space

Enterprise Vision Yool Kim, Guy Weichenberg, Frank Camm, Thomas C. Whitmore, 2020-09-15 The Space Enterprise Vision SEV developed jointly by Air Force Space Command AFSPC and the National Reconnaissance Office in 2015 describes an integrated approach to building a force across all space mission areas coupling the delivery of space capabilities with the ability to defend space capabilities Achieving this vision requires reducing acquisition time lines and improving integration of the space enterprise Given that the SEV requires a departure from the way space systems are currently acquired AFSPC headquarters and Space and Missile Systems Center SMC asked RAND Project AIR FORCE PAF to assess key barriers to realizing the SEV and recommend ways to overcome those barriers to help achieve the SEV goals The research team examined a range of potential approaches to support the goals of the SEV based on a literature review and semistructured interviews with acquisition subject matter experts and sponsor guidance PAF identified several promising alternative acquisition approaches that merit in depth examination in this project modular open system architectures MOSA agile acquisition rapid prototyping These concepts are not new but implementing them in a Department of Defense DoD setting is challenging for a variety of reasons Therefore the examination focuses on likely challenges to implementation and recommendations to overcome them to improve the likelihood of success should these acquisition approaches have a role in the SEV Each of these acquisition approaches can be implemented independently but there are instances in which they may be used synergistically as illustrated in the body of the report **The Commercial Space Launch Industry** United States. Congress. House. Committee on Science, Space, and Technology. Subcommittee on Space Science and Applications, 1991
