universalism In this book Pablo Bustinduy persuasively argues that political universalism emerged from both the developments of Newtonian science and the formulation of the modern philosophy of the State In the metaphysics of an open empty abstract and absolute space Bustinduy suggests the universalist project of modern politics found its logical model and foundation There the anxiety of a dislocated world was overcome and the ontology of modern physics found a specific political expression that despite being besieged by multiple crises still animates our political imagination By offering a political reading of early modern philosophy of space Space and Political Universalism in Early Modern Physics and Philosophy reveals the connections between the logical development of early modern science the contemporary elaborations of the philosophy of the State and the historical articulations of the Westphalian system early capitalist social formations and the European colonial project In doing so it offers a powerful reflection on how we might detach democracy from the perilous metaphysics of infinite space that has engendered political violence and domination positing space as an emptiness that prevents the closure of the political itself

Zeno's Paradox Joseph Mazur, 2008-03-25 The fascinating story of an ancient riddle

and what it reveals about the nature of time and space Three millennia ago the Greek philosopher Zeno constructed a series of logical paradoxes to prove that motion is impossible Today these paradoxes remain on the cutting edge of our investigations into the fabric of space and time Zeno's Paradox uses the motion paradox as a jumping off point for an exploration of the twenty five hundred year quest to uncover the true nature of the universe From Galileo to Einstein to Stephen Hawking some of the greatest minds in history have tackled the problem and made spectacular breakthroughs but through it all the paradox of motion remains [The Routledge Companion to Philosophy of Time](#) Nina Emery, 2025-09-30

The Place of God at the Bookends of the Bible David W. Larsen, 2023-10-09 What if everything in the Bible has a larger outer context than is usually accounted for Missional and biblical theologies suggest that the Bible presents a grand story like a play with multiple acts The acts typically include creation fall redemption and finally restoration But what if the whole story itself occurs in another larger setting occurring within a mission running in the background throughout the whole Bible How might this aid our research reading and application And why is this being proposed now This book explores

these questions The larger context is the production of the place of God a home and homeland wherein God with his people dwell on earth Since place is underdeveloped in biblical studies the book presents a new method for interpreting place Then the book lays out the case that a grand mission to produce the place of God becomes the outer context for the whole Bible Finally the book defends this proposal with an in depth placial commentary of the bookends of the Bible since these bookends provide keys to unlock this message thereby inviting further study on the rest of the Bible and on the implications for this transformative perspective

Historical Epistemology of Space Matthias Schemmel,2015-12-11 This monograph investigates the development of human spatial knowledge by analyzing its elementary structures and studying how it is further shaped by various societal conditions By taking a thoroughly historical perspective on knowledge and integrating results from various disciplines this work throws new light on long standing problems in epistemology such as the relation between experience and preformed structures of cognition What do the orientation of apes and the theory of relativity have to do with each other Readers will learn how different forms of spatial thinking are related in a long term history of knowledge Scientific concepts of space such as Newton s absolute space or Einstein s curved spacetime are shown to be rooted in pre scientific structures of knowledge while at the same time enabling the integration of an ever expanding corpus of experiential knowledge This work addresses all readers interested in questions of epistemology in particular philosophers and historians of science It integrates forms of spatial knowledge from disciplines including anthropology developmental psychology and cognitive sciences amongst others
