Space In The 21st Century:

Space in the 21st Century Richard S. Lewis,2010-06-01 James A Michener **Humans in Space** Harry L. Shipman,2013-11-11 The Farthest Shore Joseph N. Pelton,Angelia P. Bukley,2010 Presents a collection of essays that cover space sciences and exploration in the twenty first century with information on such topics as satellites spacecraft space missions and programs space polity and law and the economics of space travel **The 21st Century's All New Cosmology** Charles J. Sven,1999 *Space Warfare in the 21st Century* Joan Johnson-Freese,2016-11-08 This book examines the recent shift in US space policy and the forces that continually draw the US back into a space technology security dilemma The dual use nature of the vast majority of space technology meaning of value to both civilian and military communities and being unable to differentiate offensive from defensive intent of military hardware makes space an area particularly ripe for a security dilemma In contrast to previous administrations the Obama Administration has pursued a less militaristic space policy instead employing a strategic restraint approach that stressed multilateral diplomacy to space challenges The latter required international solutions and the United States subsequently even voiced support for an International Code of Conduct for Space That policy held until the Chinese anti satellite ASAT test in 2013 which demonstrated expanded Chinese capabilities This volume explores the issues arising from evolving space capabilities across the world and the security challenges this poses It subsequently discusses the complexity of the space environment and argues that all tools of national power must be used with some degree of balance toward addressing space challenges and achieving space goals This book will be of much interest to students of space policy defence studies foreign policy security studies and IR **Space, the Dormant Frontier** Joan Johnson-Freese,Roger Handberg,1997-09-23 Rather than examining only the civil or military side of the US space program as have many books in the past Space the Dormant Frontier takes a unique look at the space program as a whole Part of the book s treatise is that the two communities must stop ignoring each other if the US space program is to move forward beyond being a science project jobs program or political football How the program got into its current semi desperate state is also examined as history has given space a legacy once glorious now an albatross The authors include information and analysis on the military and civil space programs challenge the perspective of the Washington Beltway analyst with vested interests in the status quo and make policy recommendations based on realism rather than idealism

Space Missions of the 21st Century Arnold Ringstad,2016 Compelling narrative nonfiction text presents the major space missions of the 21st century featuring the intrigue and excitement behind the missions Additional features to aid comprehension include a table of contents fact filled captions and callouts infographics a glossary a listing of source notes sources for further research and an introduction to the author **The 21st Century in Space** , *Designs on Space* Richard Wagner,2000 An inside look at the next generation of NASA space probes and missions covers the International Space Station the manned mission to Mars and numerous unmanned missions to the outer planets and their moons

Vision-21, Space Travel for the Next Millennium ,1991 *Transforming defense : national security in the 21st century : report of the National Defense Panel* , Space for the 21st Century Michael Simpson Ph D,2016-05-12 FOREWORD By Bruce McCandless II Former NASA Astronaut This volume is the fifth in the series on contemporary space topics by the Aerospace Technology Working Group with support from Secure World Foundation the International Space University and the International Institute of Space Commerce It deals principally with the topic of sustainability of space operations In all fields of challenging endeavor actually accomplishing an objective e g putting a satellite into orbit comes first followed by exploitation or commercialization and lastly by a realization that the resource is finite Such finite ness may come from considerations of pollution e g space debris propulsion effluent or of actual limitations on the availability of the resource e g crowding of Geostationary Earth Orbit GEO Both of these topics are among those discussed in detail in this volume Developing countries in particular may find such considerations too burdensome and this begs the need for regulation to avoid the classic Tragedy of the Commons situation In the case of orbital debris we have collectively arrived at a point where tens of millions of tiny pieces of debris are currently in orbit decaying at diverse rates in a situation where a single flake of paint has been demonstrated to be capable of causing damage when impacting at high relative velocities At the other end of the spectrum defunct satellites e g ESA s Envisat present discrete problems worthy of individual retrieval disposal efforts but fraught with complications arising from ownership to potentially still effective ITAR constraints on access to onboard technology And of course the managers of the International Space Station are absolutely paranoid about higher altitude orbital debris eventually decaying to and ultimately impacting their very large orbiting facility While space may realistically be dubbed infinite very specific orbits or sets of orbits have practical capacity limits In GEO for example spacing of satellites along it are subject to constraints arising from use of the same radio frequency spectra and the size of ground based antennas required to spatially discriminate between adjacent satellites In popular high inclination sun synchronous Earth imaging orbits these all converge near the poles creating a traffic management concern arising from the risk of collision The subject of green propellants is treated from several aspects The Liquid Oxygen Liquid Hydrogen system while yielding only water vapor from combustion may have a significant carbon footprint associated with the manufacture of the LH2 from methane or methanol Aluminum oxide an exhaust product of common solid propellant boosters is generally regarded as inert but the inhalation of fine particles of it can cause pulmonary fibrosis or other lung damage in humans Additionally the need for oxidizer depletion shutdown in the family of hydrazine oxidizer booster stages results in significant quantities of UDMH for example being dispersed upon impact of the early stages No Foreword can do adequate justice to the carefully developed material within the publication itself For a detailed and thought provoking coverage of the principal topics associated with the sustainability of space operations this book is highly recommended authoritative and a good read **The Space Industry of the Future** Mark W. McElroy Jr,2022-09-19 The Space Industry of the Future consists of the first instance of

guidance for the space industry on how value creation in space can occur for the greater benefit of humanity using principles of capitalism and sustainability The timing of this book is ideal given 1 sustainability challenges facing humanity and 2 that the growth of the commercial space economy is now occurring at a rate never seen before This book presents an opportune guide written for technical business and policy practitioners alike that frames how this industry growth should occur from an integrated values and commercial perspective This perspective is presented in the context of the modern technical capabilities of space systems relative to the world's greatest problems The guidance contained in this book for the growing commercial space industry includes considerations beyond profit seeking alone This guidance is founded on a bespoke value creation criteria to apply in the context of for profit outer space activities that if used will result in the maximum value creation that a company is capable of The criteria are developed and presented through a rigorous discussion on capitalism economics value theory the circular economy stakeholder management and ethics The value creation criteria are then discussed at length in relation to the space industry The primary audience for this book is practitioners within the space industry this includes investors business managers policy makers engineers and scientists The secondary audience includes students and researchers as well as a growing range of parties interested in space policy and entrepreneurship
