Colonia, 2002 Welcome to Colonia a fantastical adventure story set in a sometimes familiar new world hemisphere populated by pirates colonists and mythical beasts of land and sea

The Beaver Dietland Müller-Schwarze, Lixing Sun, 2003 Beavers can and do dramatically change the landscape The beaver is a keystone species their skills as foresters and engineers create and maintain ponds and wetlands that increase biodiversity purify water and prevent large scale flooding Biologists have long studied their daily and seasonal routines family structures and dispersal patterns As human development encroaches into formerly wild areas property owners and government authorities need new nonlethal strategies for dealing with so called nuisance beavers At the same time the complex behavior of beavers intrigues visitors at parks and other wildlife viewing sites because it is relatively easy to observe In an up to date exhaustively illustrated and comprehensive book on beaver biology and management Dietland Müller-Schwarze and Lixing Sun gather a wealth of scientific knowledge about both the North American and Eurasian beaver species The Beaver is designed to satisfy the curiosity and answer the questions of anyone with an interest in these animals from students who enjoy watching beaver ponds at nature centers to homeowners who hope to protect their landscaping Photographs taken by the authors document every aspect of beaver behavior and biology the variety of their constructions and the habitats that depend on their presence Beaver facts Just as individual beavers shape their immediate surroundings so did the distribution of beavers across North America influence the paths of English and French explorers and traders As a result of the fur trade beavers were wiped out across large areas of the United States Reintroduction efforts led to the widespread establishment of these resilient animals and now they are found throughout North America Europe and parts of the southern hemisphere Beaver meadows provided early settlers with level fertile pastures and hayfields Based on the fossil record the smallest extinct beaver species were the

size of a muskrat and the largest may have reached the size of a black bear five to six times as large as today's North American beavers. Beaver gnawed wood has been found alongside the skeleton of a mastodon. Some beavers remain in the home lodge for an extra year to assist their parents in raising younger siblings. They feed, groom, and guard the newborn kits. In 1600, beaver ponds covered eleven percent of the upper Mississippi and Missouri Rivers watershed above Thebes, Illinois. Restoring only 3 percent of the original wetlands might suffice to prevent catastrophic floods such as those in the early 1990s.
