 Following the crisis of the Special Period Cuba promoted urban agriculture throughout its towns and cities to address food  
 sovereignty and security Through the adoption of state recommended design strategies these gardens have become places of  
 social and economic exchange throughout Cuba This book maps the lived experiences surrounding three urban farms in  
 Havana to construct a deeper understanding about the everyday life of this city Using narratives and drawings this research  
 uncovers these sites as places where education intimacy entrepreneurship wellbeing and culture are interwoven alongside  
 food production Henri Lefebvre s latent work on rhythm analysis is used as a research method to capture the everyday beats  
 particular to Havana surrounding these sites This book maps the many ways in which these spaces shift power away from the  
 state to become places that are co created by the community to serve as a crucial hinge point between the ongoing collapse  
 of the city and its future wellbeing     **Seeing the City Digitally** Gillian Rose, 2025-10-01 This book explores what s  
 happening to ways of seeing urban spaces in the contemporary moment when so many of the technologies through which  
 cities are visualised are digital Cities have always been pictured in many media and for many different purposes This edited  
 collection explores how that picturing is changing in an era of digital visual culture Analogue visual technologies like film  
 cameras were understood as creating some sort of a trace of the real city Digital visual technologies in contrast harvest and  
 process digital data to create images that are constantly refreshed modified and circulated Each of the chapters in this  
 volume examines a different example of how this processual visuality is reconfiguring the spatial and temporal organisation  
 of urban life     Social Theory and the Environment David Goldblatt, 2013-05-28 This book establishes whether contemporary  
 social theory can help us understand the structural origins of environmental degradation and environmental politics     *The*

**Henri Lefebvre** Chris Butler, 2012-10-12 While certain aspects of Henri Lefebvre's writings have been examined extensively within the disciplines of geography social theory urban planning and cultural studies there has been no comprehensive consideration of his work within legal studies *Henri Lefebvre Spatial Politics Everyday Life and the Right to*

the City provides the first serious analysis of the relevance and importance of this significant thinker for the study of law and state power. Introducing Lefebvre to a legal audience, this book identifies the central themes that run through his work, including his unorthodox humanist approach to Marxist theory, his sociological and methodological contributions to the study of everyday life, and his theory of the production of space. These elements of Lefebvre's thought are explored through detailed investigations of the relationships between law, legal form, and processes of abstraction; the spatial dimensions of neoliberal configurations of state power; the political and aesthetic aspects of the administrative ordering of everyday life; and the right to the city as the basis for asserting new forms of spatial citizenship. Chris Butler argues that Lefebvre's theoretical categories suggest a way for critical legal scholars to conceptualise law and state power as continually shaped by political struggles over the inhabitation of space. This book is a vital resource for students and researchers in law, sociology, geography, and politics, and all readers interested in the application of Lefebvre's social theory to specific legal and political contexts.

**Murder in Space City** Henry Peder Lundsgaarde, 1977      *Telecommunications and the City* Steve Graham, Simon Marvin, 2002-11-01

*Telecommunications and the City* provides the first critical and state-of-the-art review of the relations between telecommunications and all aspects of city development and management. Drawing on a range of theoretical approaches and a wide body of recent research, the book addresses key academic and policy debates about technological change and the future of cities with a fresh perspective. Through this approach, the complex and crucial transformations underway in cities in which telecommunications have central importance are mapped out and illustrated. Key areas where telecommunications impinge on the economic, social, physical, environmental, and institutional development of cities are illustrated by using boxed extracts and a wide range of case study examples from Europe, Japan, and North America. Rejecting the extremes of optimism and pessimism in current hype about cities and telecommunications, *Telecommunications and the City* offers a sophisticated new perspective through which city telecommunications relations can be understood.      **The Algorithmic Society** Marc Schuilenburg, Rik Peeters, 2020-12-29
