**The Spaces Between Buildings** Larry Ford, 2000-08 Three photographic essays offer a study of the neglected nooks and crannies between structures from gates and fences to sidewalks alleys and parking lots In his exploration of how spaces become places geographer Ford invites readers to see anew the spaces they encounter every day and often take for granted 52 halftones

Life Between Buildings Jan Gehl, 2011-01-17 The first Danish language version of this book published in 1971 was very much a protest against the functionalistic principles for planning cities and residential areas that prevailed during that period The book carried an appeal to show concern for the people who were to move about between buildings and it urged an understanding of the subtle almost indefinable but definite qualities which have always related to the interaction of people in public spaces and it pointed to the life between buildings as a dimension of architecture that needs to be carefully treated Now 40 years later many architectural trends and ideologies have passed by over the years These intervening years have also shown that the liveliness and liveability of cities and residential areas continues to be a important issue The intensity in which fine public spaces are used at this point in time as well as the greatly increased general interest in the quality of cities and their public spaces emphasises this point The character of life between buildings changes with changes in any given social context but the essential principles and quality criteria to be employed when working with life between buildings has proven to be remarkably constant Though this work over the years has been updated and revised several times this version bears little resemblance with the very early versions however there was no reason to change the basic message Take good care of the life between your buildings

Spatial analysis and social spaces Eleftheria Paliou, Undine Lieberwirth, Silvia Polla, 2014-04-01 In the past decade a range of formal spatial analysis methods has been developed for the study of human engagement experience and socialisation within the built environment Many although not all of these emanate from the fields of architectural and urban studies and draw upon social theories of space that lay emphasis on the role of visibility movement and accessibility in the built environment These approaches are now gaining in popularity among researchers of prehistoric and historic built spaces and are given increasingly more weight in the interpretation of past urban environments Spatial Analysis and Social Spaces brings together contributions from specialists in archaeology social theory and urban planning who explore the theoretical

and methodological frameworks associated with the application of new and established spatial analysis methods in past built environments The focus is mainly on more recent computer based approaches and on techniques such as access analysis visibility graph analysis isovist analysis agent based models of pedestrian movement and 3D visibility approaches The contributors to this volume examine the relationship between space and social life from many different perspectives and provide illuminating examples from the archaeology of Greece Italy and Cyprus in which intra site analysis offers valuable insights into the built spaces and societies under study
