Applied Spatial Statistics for Public Health Data Lance A. Waller, Carol A. Gotway, 2004-07-29 While mapped data provide a common ground for discussions between the public the media regulatory agencies and public health researchers the analysis of spatially referenced data has experienced a phenomenal growth over the last two decades thanks in part to the development of geographical information systems GISs This is the first thorough overview to integrate spatial statistics with data management and the display capabilities of GIS It describes methods for assessing the likelihood of observed patterns and quantifying the link between exposures and outcomes in spatially correlated data This introductory text is designed to serve as both an introduction for the novice and a reference for practitioners in the field Requires only minimal background in public health and only some knowledge of statistics through multiple regression Touches upon some advanced topics such as random effects hierarchical models and spatial point processes but does not require prior exposure Includes lavish use of figures illustrations throughout the volume as well as analyses of several data sets in the form of data breaks Exercises based on data analyses reinforce concepts

Applications of Spatial Statistics Ming Hung, 2016-11-02 Spatial statistics has been widely used in many environmental studies This book is a collection of recent studies on applying spatial statistics in subjects such as demography transportation precision agriculture and ecology Different subjects require different aspects of spatial statistics In addition to quantitative statements from statistics and tests visualization in forms of maps drawings and images are provided to illustrate the relationship between data and locations This book will be valuable to researchers who are interested in applying statistics to spatial data as well as graduate students who know statistics and want to explore how it can be applied to spatial data With the processing part being simplified to several mouse clicks by commercial software one should pay more attention to justification of using spatial statistics as well as interpretation and assessment of the results GIScience proves to be a useful tool in visualization of spatial data and such useful technology should be utilized as part for the interpretation and assessment of the results
