**Research Methods for History** Simon Gunn, 2011-11-30. The first guide to the sources, techniques and concepts needed for effective historical research. While historians have become increasingly sensitive to social and cultural theory since the 1980s, the actual methods by which research is carried out in History have been largely taken for granted. Research Methods for History encourages those researching the past to think creatively about the wide range of methods currently in use to understand how these methods are used and what historical insights they can provide. The book covers sources and methods that are well established in History such as archival research together with those that are less widely known. The themes of the different chapters have been selected to reflect recent trends in the subject. Even with more established methods, however, the aim is to present new insights and perspectives and to open researchers' minds to new methodological possibilities.

**Enhancing the City.** Giovanni Maciocco, Silvia Serreli, 2009-09-30. Departing from a survey on the post-modern landscapes of tourism, this book explores the transformations the city has undergone and the way it has become a simulacrum offered to tourists, spectacularised with the aim of increasing its capacity for attraction. The experiences dealt with in the papers of authors belonging to different disciplinary fields emphasise the city's tendencies to create stage-set contexts of the private type: be it historic quarters, theme parks or hypermarkets. Issues like aestheticisation, thematisation and genericity are dealt with conceptual categories that highlight the weak resistance cities put up against the rules of the leisure industry and, more generally speaking, the consumer economy. The book inquires into the capacity of the urban and territorial project to construct a perspective for a public dimension of space. This is linked with the ethical action of the project involving an active relationship with places and a capacity to understand the dynamics of different urban populations. In this sense, capacity for innovation and creativity can contribute to transforming islands of leisure into places of the city and consumers into citizens.

**Marking Place** Jonathan Last, 2022-01-11. Much archaeological work is concerned with identifying gaps in our knowledge and developing strategies for addressing them; we perhaps spend less time thinking about how research should proceed when we already know, relatively speaking, quite a lot. The program of dating causewayed enclosures in southern Britain that was published in 2011 as *Gathering Time* (Oxbow Books) gave us a new, more precise chronology for many

individual sites as well as for enclosures as a whole and as a consequence a far better sense of their significance and place in the story of the British Early Neolithic. Arguably causewayed enclosures are now the best understood type of Neolithic monument. Yet work continues and in the last few years new discoveries have been made, older excavations published and further work undertaken on well known sites. Viewing this research within the new framework for these monuments allows us to assess where our understanding of enclosures has got to and where the focus of future research should lie. This volume originates from a Neolithic Studies Group meeting held in November 2019 which aimed firstly to showcase and explore the wide range of current work on causewayed enclosures and related sites and secondly to assess what we still want to know about these sites in light of the monumental achievement of Gathering Time. The papers collected here comprise reports on recent development led fieldwork, academic research and community projects and the volume concludes with a reflection by the authors of Gathering Time.

**Animal Husbandry in Ancient Israel** Aharon Sasson, 2016-04-08. Animals have been used to human advantage for thousands of years. *Animal Husbandry in Ancient Israel* presents an analysis of caprines and cattle husbandry in the Southern Levantine Bronze and Iron Age. The book employs key methodological approaches: comparative analysis, taphonomy, Geographic Information System spatial analysis and ethnographic studies to challenge prevalent views on the Southern Levantine ancient economy. *Animal Husbandry in Ancient Israel* argues that the key concern of nomadic rural and urban populations was survival; the common household maintained a self-sufficient economy rather than profit specialization or trade. The book will be of value to all those interested in the dynamic relationship between humans and animals in ancient Israel.

*Archaeology* Hannah Cobb, Kevin Greene, Tom Moore, 2024-03-19. This fully updated sixth edition of a classic classroom text is essential reading for core courses in archaeology. *Archaeology: An Introduction* explains how the subject emerged from an amateur pursuit in the eighteenth century into a serious discipline and explores changing trends in interpretation in recent decades. The authors convey the excitement of archaeology while helping readers to evaluate new discoveries by explaining the methods and theories that lie behind them. In addition to drawing upon examples and case studies from many regions of the world and periods of the past, the book incorporates the authors' own fieldwork research and teaching. It continues to include key reference and further reading sections to help new readers find their way through the ever-expanding range of archaeological publications and online sources, as well as colour illustrations and boxed topic sections to increase comprehension. Serving as an accessible and lucid textbook and engaging students with contemporary issues, this book is designed to support students studying Archaeology at an introductory level.
