Spatial Uncertainty For Ecology Implications For Remote Sensing And Gis Applications:

Spatial Uncertainty for Ecology, 2001-06-29 This is one of the first books to take an ecological perspective on uncertainty in spatial data It applies principles and techniques from geography and other disciplines to ecological research and thus delivers the tools of cartography cognition spatial statistics remote sensing and computer sciences by way of spatial data After describing the uses of such data in ecological research the authors discuss how to account for the effects of uncertainty in various methods of analysis **Spatial Uncertainty in Ecology** Carolyn T. Hunsaker, Michael F. Goodchild, Mark A. Friedl, Ted J. Case, 2013-12-01

The huge growth in the use of geographic information systems remote sensing platforms and spatial databases have made accurate spatial data more available for ecological and environmental models Unfortunately there has been too little analysis of the appropriate use of this data and the role of uncertainty in resulting ecological models This is the first book to take an ecological perspective on uncertainty in spatial data It applies principles and techniques from geography and other disciplines to ecological research It brings the tools of cartography cognition spatial statistics remote sensing and computer sciences to the ecologist using spatial data After describing the uses of spatial data in ecological research the authors discuss how to account for the effects of uncertainty in various methods of analysis Carolyn T Hunsaker is a research ecologist in the USDA Forest Service in Fresno California Michael F Goodchild is Professor of Geography at the University of California Santa Barbara Mark A Friedl is Assistant Professor in the Department of Geography and the Center for Remote Sensing at Boston University Ted J Case is Professor of Biology at the University of California San Diego

Innovations in Remote Sensing and Photogrammetry Simon Jones, Karin Reinke, 2009-10-14 Remote sensing of our environment is becoming increasingly accessible and important in today's society This book aims to highlight some of the broad and multi disciplinary applications and emerging practices that remote sensing and photogrammetric technologies lend themselves to The papers have been selected from the 13th and 14th Australasian Remote Sensing and Photogrammetry Conferences given by experts in remote sensing spatial analysis and photogrammetry from across the Asia Pacific region They are presented here as a collection of peer reviewed papers covering research into areas such as data fusion techniques and their applications in environmental monitoring synoptic monitoring and data processing terrestrial and marine applications of remote sensing and photogrammetry

advances and developments of methods techniques and applications of remote sensing with each chapter on a specific area of natural resources Through a comprehensive examination of the wide range of applications of remote sensing technologies to natural resources the book provides insight into advanced remote sensing systems technologies and algorithms for researchers scientists engineers and decision makers

Remote Sensing and GIS Accuracy Assessment Ross S. Lunetta, John G. Lyon, 2004-07-27 Based upon a special symposium sponsored by the U S Environmental Protection Agency EPA Remote Sensing and GIS Accuracy Assessment evaluates the important scientific elements related to the performance of accuracy assessments for remotely sensed data GIS data analysis and integration products Scientists from federal state and local governments academia and nongovernmental organizations present technical papers which examine sampling issues reference data collection edge and boundary effects error matrix and fuzzy assessments error budget analysis and change detection accuracy assessment This compilation contains 20 chapters that represent important symposium outcomes

Scaling and Uncertainty Analysis in Ecology Jianguo Wu, K. Bruce Jones, Harbin Li, Orie L. Loucks, 2006-07-02 Primarily the book draws together a series of important case studies to provide a comprehensive review and synthesis of the most recent concepts theories and methods in scaling and uncertainty analysis It compares current definitions and ideas concerning scale within a coherent framework and examines two key scaling approaches similarity based scaling which is rooted in the idea of similitude or self similarity and dynamic model based scaling which emphasizes processes and mechanisms With case studies focusing on issues ranging from population to ecosystem processes from biodiversity to landscape patterns and from basic research to multidisciplinary management and policy making the book will appeal to both researchers and practitioners working on landscape issues It will also provide a valuable resource for graduate students and professional trainees in ecology environmental policy resource management and global change science

Environmental Applications of Digital Terrain Modeling John P. Wilson, 2018-02-15 A digital elevation model DEM is a digital representation of ground surface topography or terrain It is also widely known as a digital terrain model DTM A DEM can be represented as a raster a grid of squares or as a vector based triangular irregular network TIN DEMs are commonly built using remote sensing techniques but they may also be built from land surveying DEMs are used often in geographic information systems and are the most common basis for digitally produced relief maps The terrain surface can be described as comprising of two different elements random and systematic The random stochastic elements are the continuous surfaces with continuously varying relief It would take an endless number of points to describe exactly the random terrain shapes but these can be described in practice with a network of point It is usual to use a network that creates sloping triangles or regular quadrants This book examines how the methods and data sources used to generate DEMs and calculate land surface parameters have changed over the past 25 years The primary goal is to describe the state of the art for

a typical digital terrain modeling workflow that starts with data capture continues with data preprocessing and DEM generation and concludes with the calculation of one or more primary and secondary land surface parameters Taken as a whole this book covers the basic theory behind the methods the instrumentation analysis and interpretation that are embedded in the modern digital terrain modeling workflow the strengths and weaknesses of the various methods that the terrain analyst must choose among typical applications of the results emanating from these terrain modeling workflows and future directions This book is intended for researchers and practitioners who wish to use DEMs land surface parameters land surface objects and landforms in environmental projects The book will also be valuable as a reference text for environmental scientists who are specialists in related fields and wish to integrate these kinds of digital terrain workflows and outputs into their own specialized work environments **Understanding Forest Disturbance and Spatial Pattern** Michael A.

Wulder, Steven E. Franklin, 2006-07-27 Remote sensing and GIS are increasingly used as tools for monitoring and managing forests Remotely sensed and GIS data are now the data sources of choice for capturing documenting and understanding forest disturbance and landscape pattern Sitting astride the fields of ecology forestry and remote sensing GIS Understanding Forest Disturbanc *Remote Sensing of Forest Environments* Michael A.  Sun-Kee Hong, John A. Lee, Byung-Sun Ihm, A. Farina, Yowhan Son, Kim Eun-Shik, Jae C. Choe, 2007-11-05 Problems of scale have exercised the minds of ecologists for many years and will continue to do so into the future This volume deals with this subject and with mathematical approaches to improve our understanding of complex ecological systems The book also concentrates on monitoring the responses of ecosystems especially to human impacts upon them The importance of spatial separation of function at both the landscape and ecosystem level forms an important theme Finally this special book focuses on large scale issues discussing in particular important applied ecological problems and how these can be managed through a variety of planning processes Many examples of major ecological problems in the mainstream ecological literature are drawn from Europe and North America In contrast many of the most pressing ecological problems are to be found elsewhere in the world This volume is composed of four parts according to scale objectives and application of modern ecological research Part I covers emerging concepts and models in the ecosystem complex and in the landscape Part II Biological responses to environmental changes pattern and process Part III Ecological networking and restoration technology theory and practice and finally a summary of 8th INTECOL Congress and possible future directions are covered in Part IV

Mangrove Dynamics and Management in North Brazil Ulrich Saint-Paul, Horacio Schneider, 2010-09-30 Mangrove ecosystems are being increasingly threatened by human activities Their biotic productivity supplies food and other resources to the human populations that inhabit or make use of them This volume highlights the results of a ten year German Brazilian research project called MADAM in one of the largest continuous mangrove areas of the world located in northern Brazil Based on the analysis of the ecosystem dynamics management strategies for the conservation and sustainable use of mangroves are presented and discussed Beyond the scientific results this book also provides guidelines for the development of international cooperation projects **Seagrasses: Biology, Ecology and Conservation** Anthony W.
