Spatial Data Quality:

Elements of Spatial Data Quality S.C. Guptill, J.L. Morrison, 2013-10-22 Elements of Spatial Data Quality outlines the need and suggests potential categories for the content of a comprehensive statement of data quality that must be imbedded in the metadata that accompanies the transfer of a digital spatial data file or is available in a separate metadata catalog. Members of the International Cartographic Association's Commission on Spatial Data Quality have identified seven elements of data quality: positional accuracy, attribute accuracy, completeness, logical consistency, lineage, semantic accuracy, and temporal information. In the book, the authors describe components of each data quality element, possible metrics that can be used to measure the quality of each criteria, possible testing and rating schemes, and how these parameters might differ from a producer or user point of view. Finally, no volume of this nature would be complete without a chapter devoted to necessary future research in this subject area. The chapter points out areas in need of further investigation and speculates about the use and transfer of digital spatial data in tomorrow's electronic world and at developments in presenting specified data quality information in a visualization. This book will be of interest to all of those individuals involved in geographical information systems and spatial data handling.

Fundamentals of Spatial Data Quality Rodolphe Devillers, Robert Jeansoulin, 2010-01-05 This book explains the concept of spatial data quality, a key theory for minimizing the risks of data misuse in a specific decision making context. Drawing together chapters written by authors who are specialists in their particular field, it provides both the data producer and the data user perspectives on how to evaluate the quality of vector or raster data, which are both produced and used. It also covers the key concepts in this field, such as how to describe the quality of vector or raster data, how to enhance this quality, how to evaluate and document it using methods such as metadata, how to communicate it to users, and how to relate it with the decision making process. Also included is a Foreword written by Professor Michael F. Goodchild.

Spatial Data Quality Rodolphe Devillers, Helen Goodchild, 2010 This book provides an up to date overview of research being done in the field of spatial data quality, which looks at understanding, measuring, describing, and communicating information about the imperfections of geographic data used by GIS and other mapping software. It presents results from a number of current research projects in this area, from the assessment of data accuracy to legal aspects relating to the quality of geographic information. From publisher's description.
