Spatial Ecology:

Spatial Ecology David Tilman, Peter Kareiva, 1997 *Spatial Ecology* addresses the fundamental effects of space on the dynamics of individual species and on the structure dynamics diversity and stability of multispecies communities Although the ecological world is unavoidably spatial there have been few attempts to determine how explicit considerations of space may alter the predictions of ecological models or what insights it may give into the causes of broad scale ecological patterns As this book demonstrates the spatial structure of a habitat can fundamentally alter both the qualitative and quantitative dynamics and outcomes of ecological processes *Spatial Ecology* highlights the importance of space to five topical areas stability patterns of diversity invasions coexistence and pattern generation It illustrates both the diversity of approaches used to study spatial ecology and the underlying similarities of these approaches Over twenty contributors address issues ranging from the persistence of endangered species to the maintenance of biodiversity to the dynamics of hosts and their parasitoids to disease dynamics multispecies competition population genetics and fundamental processes relevant to all these cases There have been many recent advances in our understanding of the influence of spatially explicit processes on individual species and on multispecies communities This book synthesizes these advances shows the limitations of traditional non spatial approaches and offers a variety of new approaches to spatial ecology that should stimulate ecological research

Spatial Analysis Mark R. T. Dale, Marie-Josée Fortin, 2014-09-11 Nowadays ecologists worldwide recognize the use of spatial analysis as essential However because of the fast growing range of methods available even an expert might occasionally find it challenging to choose the most appropriate one Providing the ecological and statistical foundations needed to make the right decision this second edition builds and expands upon the previous one by Encompassing the basic methods for spatial analysis for both complete census and sample data Investigating updated treatments of spatial autocorrelation and spatio temporal analysis Introducing detailed explanations of currently developing approaches including spatial and spatio temporal graph theory scan statistics fibre process analysis and Hierarchical Bayesian analysis Offering practical advice for specific circumstances such as how to analyze forest Permanent Sample Plot data and how to proceed with transect data when portions of the data series are missing Written for graduates researchers and professionals this book will be a valuable source of reference for years to come

Spatial Ecology and Conservation Modeling Robert Fletcher, Marie-Josée Fortin, 2019-02-15 This book provides a foundation for modern applied ecology Much of current ecology research and conservation addresses problems across landscapes and regions focusing on spatial patterns and processes This book is aimed at teaching fundamental concepts and focuses on learning by doing through the use of examples with the software R It is intended to provide an entry level easily accessible foundation for students and practitioners interested in spatial ecology and conservation

Spatial Ecology Patterns and Processes Vikas Rai, 2013-04-25 Spatial Ecology elucidates processes and mechanisms which structure dynamics of real world systems these include lakes ponds forests and rivers Readers are introduced to contemporary models in ecological literature based on the author's research experience The book starts by presenting an introduction to basic mechanisms of ecological processes This is followed by chapters explaining these processes responsible for generating observed spatial patterns in detail The book concludes with a chapter on water quality management and its relevance to the spatial setting in a wetland area This text in spatial ecology is a welcome resource for readers interested in models methods and methodologies best suited for the study of advanced ecology courses and topics related to ecosystem structure function and habitat fragmentation

Dispersal, Individual Movement and Spatial Ecology Mark A. Lewis, Philip K. Maini, Sergei V. Petrovskii, 2013-03-21 Dispersal of plants and animals is one of the most fascinating subjects in ecology It has long been recognized as an important factor affecting ecosystem dynamics Dispersal is apparently a phenomenon of biological origin however because of its complexity it cannot be studied comprehensively by biological methods alone Deeper insights into dispersal properties and implications require interdisciplinary approaches involving biologists ecologists and mathematicians The purpose of this book is to provide a forum for researches with different backgrounds and expertise and to ensure further advances in the study of dispersal and spatial ecology This book is unique in its attempt to give an overview of dispersal studies across different spatial scales such as the scale of individual movement the population scale and the scale of communities and ecosystems It is written by top level experts in the field of dispersal modeling and covers a wide range of problems ranging from the identification of Levy walks in animal movement to the implications of dispersal on an evolutionary timescale

Spatial Ecology Stephen Cantrell, Chris Cosner, Shigui Ruan, 2009-08-05 Exploring the relationship between mathematics and ecology Spatial Ecology

focuses on some important emerging challenges in the field These challenges consist of understanding the impact of space on community structure incorporating the scale and structure of landscapes into mathematical models and developing connections between spatial ecology
