Skin Disorders Hc :

Skin Disorders in Vulnerable Populations Fingani Annie Mphande, 2020-05-05 This book focuses on neglected skin diseases and conditions in resource poor countries through the lens of livelihoods. These diseases when neglected not only affect the skin but also joint movement and physical appearance severely influencing the lives and livelihoods of individuals and families in vulnerable communities. The book explores why neglected skin diseases thrive in resource poor countries and considers how this cycle might be broken by looking at the impact on livelihoods and access to healthcare in affected communities. The research is shaped by three guiding questions. Firstly, why have some measures been successful in one part of a population and not the other? Secondly, what is unique about vulnerable populations in various parts of the world? And thirdly, can the cycle of debilitating skin diseases and conditions in resource poor countries be broken? In addressing these concerns, the book excavates past and present efforts in public health measures to combat these diseases, considers the impact of culture and livelihoods, and reviews some of the milestones in disease elimination and eradication. This book will be an indispensable source for health service planners, administrators, and practitioners working with vulnerable populations, as well as graduate students and researchers in public health.

Stress and Skin Disorders Katlein França, Mohammad Jafferany, 2016-12-16 Dermatological conditions are intimately related to stress. Stress can affect, reveal, or even exacerbate a number of skin disorders including alopecia, seborrheic dermatitis, psoriasis, atopic dermatitis, pruritus, herpes, lichen planus, rosacea, and urticarial. On the other hand, the skin disease itself could induce a secondary stress for the patient, influencing his or her quality of life. There is increasing evidence that stress influences disease processes and contributes to inflammation through the modulating hypothalamic-pituitary-adrenal axis, releasing neuropeptides, neurotrophins, lymphokines, and other chemical mediators from nerve endings to dermal cells. This is one of the first books published on this topic, focusing more on the basic science aspects of stress in dermatopathology, oxidants, antioxidants, and oxidative injury in dermatopathology, dermatopharmacology, and dermatotoxicology. Most Psychodermatology texts adopt a practical approach to identify all types of Psychodermatology disorders, focusing on clinical treatment. This concise title offers a comprehensive and didactic approach to skin diseases caused or exacerbated by stress, as well as covers the immunology, role, and effect of stress on skin disease and quality of life in dermatology. In the current programs of medical residency in dermatology, little is taught about the relationship between stress and skin diseases, and this book is an important tool for young dermatologists and psychodermatologists in training.
