Technological Change And Employment Innovation In The German Economy:

Technological Change and Employment Ronald Schettkat, Michael Wagner, 2019-07-08 No detailed description available for Technological Change and Employment

Technological Change and Regional Development in Europe Ludwig Schätzl, Javier Revilla Diez, 2012-12-06 This book presents the findings of the extensive research programme funded by the Deutsche Forschungsgemeinschaft German Research Council and entitled Technological Change and Regional Development in Europe The goal of this programme was to carry out research by means of empirical surveys into the relationship between technological change and regional development Over a period of six years a total of 50 research projects have been undertaken in three phases each lasting two years This research programme has succeeded in actively involving leading German regional scientists from many universities as well as non university research institutions In addition numerous research projects were carried out in close co operation with internationally renowned partners We should like to express our gratitude for the support provided by the Deutsche Forschungsgemeinschaft Without their financial backing of the research programme it would not have been possible to undertake such an ambitious project Thanks also go to the contributors of this volume for their willingness to participate in our joint project We wish in addition to acknowledge the contribution of Prof Dr Philip Cooke whose refereeing of the chapters has enhanced the quality of the work presented here Finally our thanks go to Angela Spence for her expert editorial assistance linguistic editing and the preparation of the Index and also Franco Vaio for taking care of the technical aspects and production of the final copy Their combined efforts have been crucial for successfully bringing together contributions from so many different authors in a single volume

Innovation and Technological Change in Eastern Europe Michael Fritsch, Horst Brezinski, Horst Dieter Brezinski, 1999-11-25 Reserach suggests that innovation and technical change are crucial for the economic recovery of the former centrally planned countries in Central and Eastern Europe This text analyzes the development of innovation systems and technology in this region from various perspectives

Globalization, Information Technology and Development J. James, 1999-02-24 Jeffrey James develops the insights of the often separate literatures on globalization and information technology and demonstrates their interdependence The central insight is that globalization is mainly a technological phenomenon driven by influences exerted on international trade and foreign investment by various forms of information technology Developing countries however are not sharing equally in the gains from globalization thus induced by the new technologies These gains tend to be concentrated among a narrow group of relatively advanced countries and moreover within some of those countries information technology appears to exacerbate existing income inequalities

Technological Change, Economic Development and Space Cristoforo S. Bertuglia, Manfred M. Fischer, Giorgio Preto, 2012-12-06 The pressures of global competition are affecting regions throughout the world and making it increasingly necessary to understand the complex underlying mechanisms and the potential for innovation offered by new technology Success in

economic restructuring depends not only on the technology itself but the professional and entrepreneurial skills available and the support of provided by institutions and information networks The very local nature these phenomena which are critical to the innovative propensity of firms operating within the region introduces an inevitable spatial dimension The time therefore seems ripe to bring together contributions from scholars working in different but related disciplines with the aim of investigating the triangular relationship between technological change economic development and space The present volume offers a compact review of current theoretical developments and valuable insights deriving from recent empirical studies carried out both within Europe and elsewhere All those contributing to this volume are actively involved in research in the field Without their intellectual contribution and willingness to participate in this joint project the book would not have been possible We should like in addition to thank Angela Spence for her capable assistance in coordinating the various stages of preparation of the book as well as her translation work and careful linguistic editing Thanks also go to Paola Stasi for her meticulous copy editing and help in preparing the indices Their work has been invaluable in moulding together in a single volume contributions from so many different sources

Economics of Structural and Technological Change Cristiano Antonelli, Nicola De Liso, 2002-09-11 Technology has long been seen as a path to economic growth However there is considerable debate about the exact nature of this relationship Economics of Structural and Technological Change employs a wide range of theoretical and applied approaches to explore the concept of technological change The book begins with a series of in depth discussions of the economic analysis of technological change The second section contains a discussion of theoretical models of technological change focusing on issues such as time and innovation The third section brings together a number of applied analyses of technological change and examines the effect of factors such as human resource constraints patenting and science and technology indicators

The Economics of Technological Change and Employment in the Digital Machine Age Falk Urban, 2015-12-22 Master s Thesis from the year 2015 in the subject Economics Other grade 1 0 University of Paderborn language English abstract Technology as a Matter of Economic Interest A timeliness object of discussion since the first noteworthy appearance of economic literature has always been the construct of technological unemployment The fear of people being put out of work by some machines really took off during the industrial revolution in the late 18th century owed to the invention of the steam machine which eventually lead to the automation of the weaving craft The economic interest in the relationship between new technology and its social impact is mostly based on the idea of increased productivity If we consider a production function containing an arbitrary number of input factors then given a certain amount of output profits will decrease if any of those inputs is becoming more expensive In the course of time before human and property rights were installed this have been most often the factors land and labor Labor insofar as it depended massively on the ability of keeping people healthy and well nourished and also on the expected life span which was certainly lower centuries ago The United Kingdom was affected first and severest by the invention of the steam engine Ulrike

Herrmann 2013 explains the necessity of this invention on the scarcity of labor due to the wars and famines plaguing the Europe of that era This disruptive general purpose technology is the first encounter of employees with massive technological unemployment and the almost obliteration of certain professions i e weavers

Elgar Companion to Neo-Schumpeterian Economics Horst Hanusch,Andreas Pyka,2007 The Elgar Companion to Neo Schumpeterian Economics is a cutting edge collection of specially commissioned contributions highlighting not only the broad scope but also the common ground between all branches of this prolific and fast developing field of economics For 25 years economists have been investigating industrial dynamics under the heading of neo Schumpeterian economics which has itself become a mature and widely acknowledged discipline in the fields of innovation knowledge growth and development economics The Elgar Companion to Neo Schumpeterian Economics surveys the achievements of the most visible scholars in this area The contributions to the Companion give both a brief survey on the various fields of neo Schumpeterian economics as well as insights into recent research at the scientific frontiers The book also illustrates the potential of neo Schumpeterian economics to overcome its so far self imposed restriction to the domains of technology driven industry dynamics and to become a comprehensive approach in economics suited for the analysis of development processes in all economic domains Integrating both the public sector and financial markets the book focusses on the co evolutionary processes between the different domains As a roadmap for the development of a comprehensive neo Schumpeterian theory the Companion will be an invaluable source of reference for researchers in the fields of industrial dynamics and economic growth and academics and scholars of economics generally PhD students will find the Companion an indispensable general introduction to the field of neo Schumpeterian economics It will also appeal to politicians and consultants engaged in national and international policy as the Companion deals with the highly important and ever topical phenomena of economic development

Innovation, Economic Change and Technology Policies

STROETMANN,2013-11-11 Technological progress is a major factor shaping economic growth Today s standard of living is a direct result of scientific advances and technical change in the past Since uncontrolled technological progress has become a menace to our well being and may actually threaten our survival it is necessary to learn to manage technological progress and direct innovative activities in such a manner that both private wants and social needs play a dominant role in determining the rate and direction of technical change This requires a better understanding of the processes of technical change of their impact on and interrelationships with economic and social developments and of the means and measures by which both

individuals and governments can influence and direct technological progress To this end the Ministry for Research and Technology of the Federal Republic of Germany and the National Science Foundation of the United States of America invited a group of scholars corporate managers and civil servants to a one week seminar on Technological Innovation The seminar took place in April 1976 in Bonn Federal Republic of Germany Most papers presented at this meeting were specifically prepared for the seminar With this volume they are made available to a larger audience to further stimulate discussion not only among scholars interested in innovation research and technology policy questions but also among managers union officials civil servants and others directly or indirectly concerned with and affected by technical change

Technology and the Future of European Employment Pascal Petit, Luc Soete, 2001 What is the potential of the new information and communication technologies This book assesses the relationship between technological change and employment in all its dimensions focusing on contemporary economies in Europe The authors discuss patterns

Institutional Frameworks and Labor Market Performance Friedrich Buttler, Wolfgang Franz, Ronald Schettkat, David Soskice, 2005-08-17 Institutional Frameworks and Labor Market Performance produces an in depth analysis of the functioning of various labor market institutions in both the USA and Germany Particular emphasis is given to the substantial differences between the US and Germany in the ways important areas are regulated The authors show that the impact of institutions on economic performance is ambivalent They argue that in this sense the decision is not one between regulation and deregulation but rather one between different degrees and forms of regulation

Innovative Technology and Globalization Chantal Ammi, 2009-05-05 Globalization is leading the industry worldwide especially the new technology sector The main aim of the book is to enhance the reader's knowledge especially from a multidisciplinary perspective rather than from an individual functional perspective the role of the globalization in the evolving world of the new technologies This book will overview the process of globalization from a number of perspectives including historical geographical and social viewpoints while focusing on the new technologic products and services Globalization and its effects on the innovative technology sector are best examined in terms of the social ramifications and especially the geographical and political and economic or political economy contexts at and between different levels including the local the regional and the global

Technology and Employment Richard Michael Cyert, David C. Mowery, Committee on Science, Engineering, and Public Policy (U.S.). Panel on Technology and Employment, 1987 This report addresses a number of issues that have surfaced in the debates over the impact of technological change on employment These issues include the effects of technological change on levels of employment and unemployment within the economy on the displacement of workers in specific industries or sectors of the economy on skill requirements on the welfare of women minorities and labor force entrants in a technologically transformed economy and on the organization of the firm and the workplace It concludes that technological change will contribute significantly to growth in employment opportunities and wages although workers in specific occupations and

industries may have to move among jobs and careers Recommends initiatives and options to assist workers in making such transitions ISBN 0 309 03744 1 pbk Productivity, Inequality, and the Digital Economy Nathalie Greenan,Yannick L'Horty,Jacques Mairesse,2002-08-02 Essays on the computer and the economy particularly in relation to employment rates and to wage inequality The widespread diffusion of information and communication technologies ICT has had controversial seemingly paradoxical consequences ICT are viewed as driving growth and employment in the United States while contributing to European unemployment and the so called Eurosclerosis At the same time both the United States and Europe have seen increased wage inequalities between skilled and unskilled workers This book explores the computer s puzzling effects on the economy at both the micro and macro levels The contributions include data from field work small samples of firms and national surveys of management practice econometric studies and macroeconomic theoretical analysis Labor, Business, and Change in Germany and the United States Kirsten S. Wever,2001 Comprises five papers which compare industrial relations in Germany and the USA Focuses on the intersection between the strategies and practices of employers unions and employer associations and the cultural and institutional frameworks within which they operate Includes a general comparison of employment relations in the two countries *Innovation and Firm Performance* Bettina Peters,2008-01-08 The process of firms growth in terms of productivity or employment is a major concern of policy makers In this context innovations are considered to play a crucial role in stimulating firms performance This book investigates this general hypothesis by looking at three topics 1 Does innovation lead to an increase in employment growth 2 Does innovation boost labour productivity 3 Does innovation in one period improve innovation performance in subsequent periods **The Last Technological Innovations and Its Effects on Growth Process, Labor Market and Society** Gül Ekinçi,Burhan Akyılmaz,2020-12-17 Innovation generally based on curiosity and intuition is defined as a discovery invention and an R the idea of having more output with less input is based on production info and technologies production volume the rise of motivation are based on labor force and therefore they are all accepted as indicators of economic growth Capital accumulation technological developments and increase in labor force constitute the main dynamics of growth of the global world economy Technological progress doesn t only provide high output and productivity but it also creates economic growth Since growth in economic sense corresponds to the rise in tools and products that are used to meet human needs innovations create new employment and business lines at this point On the other hand innovations in social sense fight against poverty inequality and also exclusion being related to them Innovations offer technological effective productive and sustainable solutions to these problems in social sense While developed countries that are more advanced in technology and economic growth constitute only one fifth of the world population they use four of five of the world resources and therefore the gap between developing countries and them is increasing everyday This situation is seen as an obstacle in front of the aim of a sustainable world Since the direction of technological innovation is determined by social and economic needs innovation

types such as radical disruptive incremental contrary operational and marketing innovations create an effect of leverage with its niche role in sustainable development Many problems which are untouched in economic social and technological senses and also which are seen desperate to solve can only be solved through paradigm shifting and disruptive radical innovations that should be applied in a way that will break the existing taboos Disruptive innovations create new business lines by bringing radical solutions for the problems that seem unsolvable and stepwise incremental staggered innovations strengthen the sub innovations in these new businesslines At this point opening the way for innovations attaching importance to creative ideas to increase efficiency evaluating the contribution of innovation and also managing the processes well are quite important in innovation management The authors in this book consider innovations in different fields by evaluating the effects of innovations on labor market society and economy in order to manage the process well and contribute to it

Postindustrial Germany Claire Annesley, 2004 This book is about the state of the German model of capitalism today It is the first book to offer an integrated analysis of the political economy of unified Germany rather than dealing with east and west as separate entities It challenges the standard view that Germany is lagging behind other capitalist states in the transition to a postindustrial economy and looks in detail at the expansion of the service sector the transformation of the industrial sector and the development of the knowledge economy in unified Germany The book finds that Germany is indeed becoming postindustrial but that it is not developing in any single direction Rather the research outlined in this book suggests that some regions perform well in services or the production of knowledge while others have successfully transformed industrial production This variation it is argued is the consequence of unification as well as older economic traditions which pre date the industrial revolution

The Institutionalised Transformation of the East German Economy Sabine Spangenberg, 2012-12-06 It is perhaps worth stressing that economic problems arise always and only in consequence of change So long as things continue as before or at least as they were expected to there arise no new problems requiring a decision no need to form a plan Hayek 1945 p 523 This book is based on my research for the degree of Doctor of Philosophy which I received from Lancaster University England in the second half of 1997 It is an analysis of the structural transformation of the economic system in East Germany and the behavioural relations these changes imply The approach of institutionalised transformation not the least by the creation of the Treuhandanstalt is examined with a theory based framework which is derived from system theoretical evolutionary and constitutional ethical considerations as well as from the newly developed adjustment model which has been constructed as a dynamic transformation approach A relationship between norm changes the new institutional framework of the economic system and the compatibility of the latter with changes of the remaining partial societal systems is recognised Rigidity factors in the system s flexibility to react as well as the adjustment of economic behaviour to structural changes are analysed The marginal product of system change is defined section 2 8 2
