 Innovation and technological capability are pivotal driving forces behind economic growth This book synthesizes existing knowledge on technology upgrading failures to better understand the challenges of technology upgrading in emerging economies in an increasingly complex and connected world **Technology, Learning, and Innovation** Linsu Kim, Richard R. Nelson, 2000-07-24 In this volume published in 2000 leading scholars analyze in a series of essays and commentaries how newly industrializing countries NICs particularly those in East Asia have transformed themselves from technologically backward and poor to relatively modern and affluent economies over the past thirty years The contributors provide interesting theoretical perspectives and offer insights into the process of technological progress at both the macro and micro levels in these countries The essays review how firms particularly those in electronics and automobiles have dynamically accumulated technological capabilities at the micro level how public policies have shaped the process of technological progress at the national level and what problems some of these countries face today at both levels In addition the volume provides a comparison of East Asian NIC s with their Latin American counterparts The discussion also offers useful lessons for policies in other developing countries Technology, Economic Growth and Crises in East Asia G. Chris Rodrigo, 2001 This important book develops an evolutionary conception of growth in East Asia in which technology organizations and institutions interact and co evolve to advance productivity Episodic crises are seen as disruptions which bring to the fore structural and institutional flaws that need reform The author begins with a thorough analysis of the neo classical theory of technical change and shows that it fails to capture crucial aspects of the various learning processes involved He goes on to develop a comprehensive framework for understanding technological progress Productivity growth is seen as deriving from knowledge hard coded in equipment and structures and soft coded in human skill organizations and institutions that guide economic activity The role of exports in promoting faster growth is also examined as are the channels of technological capability acquisition This book will be welcomed by academics policymakers students government bodies and business people interested in East Asian growth and in understanding technological change in general **Organizational Strategy and Technological Adaptation to Global Change** Frank McDonald, Richard Thorpe, 2016-07-27 Confronting the wide range of factors that management face in relation to global changes this volume focuses on the implication of these changes for organizations By presenting its case using a variety of analytical tools ranging from formal game theoretical systems to inductive models based on case studies this volume concentrates on three main areas the implications of global change on the competitive environment for employment and working practices the influence of the international business environment in decision making and the importance of cultural and institutional diversity Through its comprehensive approach this book will stimulate business managers academics and students to clarify develop and extend the many complex scenarios that are integral to the debate on how business organizations can benefit from the challenges produced by global change
