Audretsch, 1995 It once took two decades to replace one third of the Fortune 500 now a subset of new firms are challenging and displacing this elite group at a breathtaking rate while armies of startups come and go within just a few years Most new jobs are in fact coming from small firms reversing the trend of a century David Audretsch takes a close look at the U S economy in motion providing a

detailed and systematic investigation of the dynamic process by which industries and firms enter into markets either grow and survive or disappear He shapes a clear understanding of the role that small entrepreneurial firms play in this evolutionary process and in the asymmetric size distribution of firms in the typical industry Audretsch introduces the large longitudinal database maintained by the U S Small Business Administration that is used to identify the startup of new firms and track their performance over time He then provides different snapshots of the process of industries in motion why new firm startup activity varies so greatly across industries what happens to these firms after they enter the market the extent to which entrepreneurial firms account for an industry s economic activity and why that measure varies across industries how small firms compensate for size related disadvantages and who exits and why Audretsch concludes that the structure of industries is characterized by a high degree of fluidity and turbulence even as the patterns of evolution vary considerably from industry to industry The dynamic process by which firms and industries evolve over time is shaped by three fundamental factors technology scale economies and demand Most important the evidence suggests that it is the differences in the knowledge conditions and technology underlying each specific industry key elements in innovation that are responsible for the pattern particular to that industry

Geisler,2001-08-30 Do science and technology create value for society and the economy and how might one go about measuring it How do we evaluate its benefits Can we even be certain that there are benefits Geisler argues that there are benefits and that they outweigh in value the negative impacts that inevitably accompany them His revolutionary new book goes on to show that they can also be measured and evaluated and in one volume all of the existing knowledge on how to do it is compiled then Geisler s own methods are offered The result is a compelling argument that the value of science and technology in our lives has indeed been positive and that the economic well being of all individuals organizations and nations rests upon them Geisler starts off by describing his conceptual framework for the evaluation of science and technology and the impact and benefits that proceed from them He discusses the nature of evaluation in general terms and then in the specific context of science technology and innovation together He reviews the state of our present knowledge and assesses the nature of value creation itself Throughout Geisler remains fixed on his driving thesis Although there are certainly some negative impacts from science and technology on the whole the results of its outputs are positive He shows how they have

contributed to a range of activities and institutions particularly to the improvement of health and human welfare worldwide Finally after discussing the theories of evaluation he gets down to the practice providing readers with a way to assess science and technological innovations for themselves
