Provided by publisher Technen: Elements of Recent History of Information Technologies with Epistemological Conclusions Andrzej Piotr Wierzbicki, 2014-07-25. The book expresses the conviction that the art of creating tools (Greek *techne*) changes its character together with the change of civilization epochs and co-determines such changes. This does not mean that tools typical for a civilization epoch determine it completely, but they change our way of perceiving and interpreting the world. There might have been many such epochs in the history of human civilization, much more than the three waves of agricultural, industrial and information civilization. This is expressed by the title *Technen* of the book, where *n* denotes a subsequent civilization epoch. During the last fifty years, we observed a decomposition of the old episteme understood as a way of creating and interpreting knowledge characteristic for a given civilization epoch of modernism, which was an episteme typical for industrial civilization. Today, the world is differently understood by the representatives of three different cultural spheres: of strict and natural sciences, of human and social sciences, especially by their part inclined towards postmodernism and technical sciences that have a different episteme than

even that of strict and natural sciences Thus we observe today not two cultures but three different episteme The book consists of four parts First contains basic epistemological observations second is devoted to selected elements of recent history of information technologies third contains more detailed epistemological and general discussions fourth specifies conclusions The book is written from the cognitive perspective of technical sciences with a full awareness and discussion of its differences from the cognitive perspective of strict sciences or human and social sciences The main thesis of the book is that informational revolution will probably lead to a formation of a new episteme The book includes discussions of many issues related to such general perspective such as what is technology proper what is intuition from a perspective of technology and of evolutionary naturalism what are the reasons for and how large are the delays between a fundamental invention and its broad social utilization what is the fundamental logical error using paradoxes that are not real only apparent of the tradition of sceptical philosophy what are rational foundations and examples of emergence of order out of chaos whether civilization development based on two positive feedbacks between science technology and the market might lead inevitably to a self destruction of human civilization etc

*Markets for Technology and Their Implications for Corporate Strategy* Ashish Arora, Andrea Fosfuri, Alfonso Gambardella, 2014 Although market transactions for technologies ideas knowledge or information are limited by several well known imperfections there is increasing evidence that during the last two decades or so such market transactions have become more common than in the past These markets bring about new challenges to the firms This paper examines some implications of markets for technology for the firms corporate and technology strategies Markets for technology change the traditional mindset in which the only available option for a company wishing to introduce an innovation is to develop the technology in house or for a company developing the technology to own the downstream assets needed to manufacture and commercialize the goods This affects the role of companies both as technology users they can now buy technologies and as technology suppliers they can now sell technologies The implications for management include more proactive management of intellectual property greater attention to external monitoring of technologies and organizational changes to support technology licensing joint ventures and acquisition of external technology For entrepreneurial startups markets for technology make a focused business model more attractive At the industry level markets for technology may lower barriers to entry and increase competition with obvious implications for the firms broader strategy as well
