Inside the Smart Home Richard Harper,2006-04-18 Using clear and accessible language this book examines the growing field of smart technology for the home The author first introduces the field before exploring the various background issues including how the home differs from other environments He then shows how these background issues affect the design and usability of these technologies A detailed case study looks at the use of handheld and wearable digital technology in sheltered housing The last section examines what it is like to live in a smart home and why they have so far failed to reach the levels of success originally predicted Invaluable reading for anybody interested in designing smart technologies for the home

Innovations of China's Mainstream Media Convergence Peng Duan,2022-03-11 This book offers fresh critical insights to the field of media convergence with a particular focus on the mainstream media of China It begins with an exploration of the emerging change among the entire mediascape the clear and distinct boundaries that used to demarcate media channels are gradually dissolved and the widespread introduction and application of new communication technologies have brought both challenges and opportunities toward China This is followed by a series of theoretical endeavor about the link between conventional media and new media

Drawing on President Xi Jinping's guiding opinions regarding media convergence, this book then analyzes the political task laid upon mainstream media in which challenges may be turned into opportunities. Given its conceptual focus and practical contribution, the book helps media professionals and related government agencies understand the wide variety of changes brought about by media convergence and the new direction for media development. Handbook of Global Media Ethics Stephen J.A. Ward, 2021-09-02 This handbook is one of the first comprehensive research and teaching tools for the developing area of global media ethics. The advent of new media that is global in reach and impact has created the need for a journalism ethics that is global in principles and aims. For many scholars, teachers, and journalists, the existing journalism ethics e.g. existing codes of ethics is too parochial and national. It fails to provide adequate normative guidance for a media that is digital, global, and practiced by professional and citizen. A global media ethics is being constructed to define what responsible public journalism means for a new global media era. Currently, scholars write texts and codes for global media, teach global media ethics, analyse how global issues should be covered, and gather together at conferences, round tables, and meetings. However, the field lacks an authoritative handbook that presents the views of leading thinkers on the most important issues for global media ethics. This handbook is a milestone in the field and a major contribution to media ethics.

Connecting People with Technology George Hayhoe, Helen M. Grady, 2020-11-25 This book explores five important areas where technology affects society and suggests ways in which human communication can facilitate the use of that technology. Usability has become a foundational discipline in technical and professional communication that grows out of our rhetorical roots which emphasize purpose and audience. As our appreciation of audience has grown beyond engineers and scientists to lay users of technology, our appreciation of the diversity of those audiences in terms of age, geography, and other factors has similarly expanded. We are also coming to grips with what Thomas Friedman calls the flat world, a paradigm that influences how we communicate with members of other cultures and speakers of other languages. And because most of the flatteners are either technologies themselves or technology-driven, technical and professional communicators need to leverage these technologies to serve global audiences. Similarly, we are inundated with information about world crises involving health and safety issues. These crises are driven by the effects of terrorism, the aging population, HIV/AIDS, and both human-made and natural disasters. These issues are becoming more visible because they are literally matters of life and death. Furthermore, they are of special concern to audiences that technical and professional communicators have little experience targeting: the shapers of public policy, seniors, adolescents, and those affected by disaster. Biotechnology is another area that has provided new roles for technical and professional communicators. We are only beginning to understand how to communicate the science accurately without either deceiving or panicking our audience. We need to develop a more sophisticated understanding of how communication can shape reactions to biotechnology developments. Confronting this complex network of issues, we're challenged to fashion both our message and the audience's perceptions ethically. Finally,

today's corporate environment is being shaped by technology and the global nature of business. Technical and professional communicators can play a role in capturing and managing knowledge in using technology effectively in the virtual workplace and in understanding how language shapes organizational culture.

Blogging Kristin Roeschenthaler Wolfe, 2014-06-04 Blogging How Our Private Thoughts Went Public examines self representational writing from its historical roots in personal diaries to its current form in personal blogs. Widely available on the Internet personal blogs are the latest form of an ever more public writing style of self reflection. Utilizing Hannah Arendt's philosophy of public private and social this book delves deeper into the question of public versus private and provides an entrance for Arendt's work into today's mediated world. Arendt's understanding of public private and social allows us to better understand the need for boundaries and for both public and private spaces in our lives. Interpersonal communication theories including boundary management theory and parasocial framework theory help to better understand how people navigate public and private boundaries in communication. These theories provide a philosophical view of our overshared and overmediated world and specifically how it affects our communication styles and practices.
