Technology in western civilization. Volume 2: technology in the twentieth century Melvin Kranzberg,1967 **The Rise**

of Western Power Jonathan Daly,2021-01-14 In this second edition of *The Rise of Western Power* Jonathan Daly retains the broad sweep of his introduction to the history of Western civilization as well as introducing new material into every chapter enhancing the book's global coverage and engaging with the latest historical debates The West's history is one of extraordinary success no other region empire culture or civilization has left so powerful a mark upon the world Daly charts the West's achievements representative government the free enterprise system modern science and the rule of law as well as its misdeeds two World Wars the Holocaust imperialistic domination and the Atlantic slave trade Taking us through a series of revolutions he explores the contributions of other cultures and civilizations to the West's emergence weaving in historical geographical and cultural factors The new edition also contains more material on themes such as the environment and gender and additional coverage of India China and the Islamic world Daly's engaging narrative is accompanied by timelines maps and further reading suggestions along with a companion website featuring study questions over 100 primary sources and 60 historical maps to enable further study Technology's Storytellers John M. Staudenmaier,1989-09-06 *Technology's Storytellers* documents the emergence of the history of technology as a coherent intellectual discipline Based on an analysis of nearly 300 articles published in *Technology and Culture* it proposes a mode of historical research as a communal rather than an individualistic endeavor looking for patterns of consensus in the authors choice of time periods geographical locations and types of technology to study It discusses the recurrent themes of the relationship between science and technology and the cultural ambience of technology and examines the extent to which historians are moving away from a once pervasive ideology of autonomous technological progress Co published with the Society for the History of Technology

Introduction to Energy Edward S. Cassedy,Peter Z. Grossman,1998-12-03 This book provides a critical examination of all aspects of modern energy production *The Lever of Riches* Joel Mokyr,1992-04-09 In a world of supercomputers genetic engineering and fiber optics technological creativity is ever more the key to economic success But why are some nations more creative than others and why do some highly innovative societies such as ancient China or Britain in the industrial revolution pass into stagnation Beginning with a fascinating concise history of technological progress Mokyr sets the background for his analysis by tracing the major inventions and innovations that have transformed society since ancient Greece and Rome What emerges from this survey is often surprising the classical world for instance was largely barren of new technology the relatively backward society of medieval Europe bristled with inventions and the period between the Reformation and the Industrial Revolution was one of slow and unspectacular progress in technology despite the tumultuous

developments associated with the Voyages of Discovery and the Scientific Revolution What were the causes of technological creativity Mokyr distinguishes between the relationship of inventors and their physical environment which determined their willingness to challenge nature and the social environment which determined the openness to new ideas He discusses a long list of such factors showing how they interact to help or hinder a nation's creativity and then illustrates them by a number of detailed comparative studies examining the differences between Europe and China between classical antiquity and medieval Europe and between Britain and the rest of Europe during the industrial revolution He examines such aspects as the role of the state the Chinese gave up a millennium wide lead in shipping to the Europeans for example when an Emperor banned large ocean going vessels the impact of science as well as religion politics and even nutrition He questions the importance of such commonly cited factors as the spill over benefits of war the abundance of natural resources life expectancy and labor costs Today an ever greater number of industrial economies are competing in the global market locked in a struggle that revolves around technological ingenuity

The Lever of Riches with its keen analysis derived from a sweeping survey of creativity throughout history offers telling insights into the question of how Western economies can maintain and developing nations can unlock their creative potential *After Clausewitz* Antulio J. Echevarria (II), Antulio Joseph Echevarria, 2000 But Echevarria disputes this traditional view and convincingly shows that these theorists Boguslawski Goltz Schlieffen Hoening and their American and European counterparts were not the architects of outmoded theories In fact they duly appreciated the implications of the vast advances in modern weaponry as well as in transportation and communications and set about finding solutions that would restore offensive maneuver to the battlefield

BOOK JACKET Tooling for War Elwood L. White, 1994 Technocracy and the American Dream William E. Akin, 1977 This study focuses on the genesis and development of the Technocrats philosophy and describes the movement's initial popularity in 1932 and 1933 and its rapid decline as a result of the Technocrats failure to develop a political philosophy which could reconcile their technological aristocracy with democracy *Special Bibliography Series*, 1957 **Forks, Phonographs, and Hot Air Balloons** Robert John Weber, 1993 How do inventions take shape How did the inventors of the sewing needle the hammer or the wheel find their ideas Are these creations the result of random events or are hidden principles at work Using everyday objects most of us take for granted from forks and Velcro to safety pins and doorknobs noted cognitive psychologist Robert Weber takes a fascinating look at how our world of inventions came into being and how the mind's problem solving abilities gave them the forms they have As an archeologist studies shards of pottery for clues about an ancient culture Weber examines the many forms of inventions from stone knives to genetically engineered mice and finds a rich record of the work of many minds over time a record of human creativity and problem solving handed down through the centuries He offers various methods for analyzing what mental paths might have been taken by these inventive minds In the test for design for example he ponders how an item would work if various components were shuffled or constructed differently revealing how the optimal shape of

the invention was discovered He challenges the reader to engage in thought experiments to explore how the horse drawn cart the waterscrew or the fork might have taken shape over many years through the efforts of successive inventors and adaptors In stripping these simple artifacts to the bone Weber finds a hidden intelligence at work in everyday objects as well as recurrent heuristics basic principles or rules of thumb that are common among many of our most successful inventions heuristics powerful enough to generate endless new ideas Weber ranges across the work of Archimedes Leonardo da Vinci the Wright brothers as well as grade school children who have won national awards for their inventions revealing that the same principles are at work in the discoveries of all of them Basic principles of invention he writes govern how we think solve and manipulate ideas whether mechanical or mental real or mythological Weber s playful original and insightful look at the inventions around us reveals a hidden intelligence in everything from screws to tea bags to synthesizers an intelligence based on principles of creativity and problem solving His fascinating account sheds light on how the mind hones its most original thoughts and products and provides a field guide for how we can tap into our own creativity

Economics of Technological Change I J. Lesourne, H. Sonnenschein, Twenty-Five Centuries of Technological Change J. Mokyr, 2013-12-19 Mokyr provides a long term perspective on the economic impact of technological change surveying developments in production technologies between 500 BC and 1914
