Telecommunications Liberalization On Two:

Telecommunications Liberalization on Two Sides of the Atlantic Martin Cave, Robert W. Crandall, 2004-06-23 A Brookings Institution Press and American Enterprise Institute publication The 1990s witnessed a major revolution in telecommunications policy in North America and Europe The electronics revolution swept the world and most countries began to realize that they could not compete in many markets without a vibrant competitive telecommunications sector As a result the European Union Canada and the United States launched major new liberalization policies aimed at opening all telecommunications markets to competition This report presents two views of the progress towards competition one for North America and one for Europe The authors provide an overview of the market structure on both continents prior to the 1990s discuss significant regulatory changes during that decade and analyze changes in rate structures and competition that have occurred since liberalization They conclude with a look at the present and future impact of the Internet and other new technologies on the telecommunications industry **Telecommunications liberalization on two sides of the Atlantic** Martin E. The Liberalisation of the Telecommunications Sector in Sub-Saharan Africa and Fostering Competition in Telecommunications Services Markets Rachel Alemu, 2018-02-02 This study investigates whether the existing regulatory framework governing the telecommunications sector in countries in Sub Saharan Africa effectively deals with emerging competition related concerns in the liberalised sector Using Uganda as a case study it analyses the relevant provisions of the law governing competition in the telecommunications sector and presents three key findings Firstly while there is comprehensive legislation on interconnection and spectrum management inefficient enforcement of the legislation has perpetuated concerns surrounding spectrum scarcity and interconnection Secondly the legislative framework governing anti competitive behaviour though in line with the established principles of competition law is not sufficient Specifically the framework is not equipped to govern the conduct of multinational telecommunications groups that have a strong presence in the telecommunications sector Major factors hampering efficient competition regulation include Uganda s sole reliance on sector specific competition rules restricted available remedies and a regulator with limited experience of enforcing competition legislation The weaknesses in the framework strongly suggest the need to adopt an economy wide competition law Lastly wireless technology is the main means through which the population in Uganda accesses telecommunications services Greater emphasis should be placed on regulating conduct in the wireless communications markets

Chinese

Telecommunications Policy Xu Yan, Douglas C. Pitt, 2002 Based on firsthand information obtained from interviews with senior figures in the Chinese telecommunications industry this book presents a unique review and analysis of the evolution of Chinese telecommunications policy It analyses the strengths weaknesses opportunities and threats facing new entrants issues of ownership and interconnection the broad economic background of 3G licensing and the significant implications of China's accession to the WTO These are fully analyzed within the context of the unfolding Chinese regulatory system *The International Telecommunications Regime: Domestic Preferences and Regime Change* Juan Ratto-Nielsen, 2009-12-26 This study examines the evolution of the international regime in telecommunications with the main objective of furthering our understanding of the process of regime transformation The dominant theories of international relations realism and institutional liberalism specify how states with shared interests use institutions to realize joint gains and to minimize the possibility of defection But these theories have little to say about when states will attempt to change the objectives that lead them to create the international institution in the first place The main goal of this book is to investigate and test the assumption that domestic politics by themselves can explain the dynamics of regime creation evolution and change as it happened within the International Telecommunications Union ITU **Telecommunications Equipment: U.S.**

Performance in Selected Major Markets, Staff Research Study #24 , Future of International Telecommunications Trade Issues United States. Congress. House. Committee on Commerce. Subcommittee on Commerce, Trade, and Hazardous Materials, 1996 *The Political Economy of Telecommunications Reforms in Thailand* Sakkarin Niyomsilpa, 2018-10-24 A study of the changing character of state society relations in contemporary Thailand using the telecommunications industry as a case study It examines the privatization and gradual reforms of the 1980s and 1990s and the political dynamics behind these policies as well as conflicts and co operation among the various players and their interests The book also covers bureaucratic and political corruption and their implications for Thailand's political democratization and economic liberalization It argues not only that the bureaucracy is no longer the dominant power in Thai politics but also that the country has moved towards a more pluralistic socio political system in which a broadly based liberalization coalition has emerged *Broadband Networks in the Middle East and North Africa* Natalija Gelvanovska, Michel Rogy, Carlo Maria Rossotto, 2014-02-11 The existing telecommunications infrastructure in the Middle East and North Africa MENA suffers from various regulatory and market bottlenecks that are hampering the growth of the Internet in most countries and related access to information and to potential new job sources **The Political Economy of Europe's Incomplete Single Market** David Howarth, Tal Sadeh, 2014-04-10 Progress in European market integration over the past two decades has come at the expense of growing flexibility or differentiation in the laws that govern the Single Market SM as well as the way that these laws are implemented This volume examines how the completion of the SM has been held back in the varied implementation of European Union competition policy variation in national policies on services

corporate law telecommunications energy taxation and gambling and the EU's uneven transportation network. These sectors and issue areas form the frontier at which the main political struggles over the future shape of the SM have taken place in the past decade. Broadly, progress in economic integration in the EU has been complicated by the need to reconcile perfectionism to the SM with the global competitiveness of European producers and efficiency gains with ideational and normative concerns. In services, there is a clash between deregulation and social policy. Financial integration has had to reconcile different institutionalized views among the member states about the place of finance in the economy and society. The SM notion supposedly entails a concrete set of substantive policy commitments that form the basis of the ever closer union. However, increasing differentiation in the SM undermines the identification of the EU's core constitutional commitments. This book was published as a special issue of the *Journal of European Public Policy*.

Shaping American Telecommunications
 Christopher H. Sterling, Phyllis W. Bernt, Martin B.H. Weiss, 2006-08-15

Shaping American Telecommunications examines the technical, regulatory, and economic forces that have shaped the development of American telecommunications services. This volume is both an introduction to the basic technical, economic, and regulatory principles underlying telecommunications and a detailed account of major events that have marked development of the sector in the United States. Beginning with the introduction of the telegraph and continuing through to current developments in wireless and online services, authors Christopher H. Sterling, Phyllis W. Bernt, and Martin B. H. Weiss explain each stage of telecommunications development, examining the interplay among technical innovation, policy decisions, and regulatory developments. Offering an integrated treatment of the interplay among technology, policy, and economics as key factors defining the development of the telecommunications sector in the United States, this volume also provides background material to facilitate understanding of each sector's contexts for many so-called new issues, problems, and trends, demonstrating origins from years or decades in the past, and careful annotation, documentation, and reference tables to enable further research on the topics discussed. This unique multidisciplinary approach provides a balanced view of U.S. telecommunications history in context with relevant economic, legal, social, and technical analyses. As such, it is essential reading for advanced students in telecommunications needing to understand how the telecommunications industry and service developed to its current form. The volume will also serve as a supplemental text in courses on telecommunications regulation, and it will be of value to professionals in the field seeking context and background for their daily work.

International Public Policy and Management
 David Levi-Faur, Eran Vigoda-Gadot, 2004-11-30
