International Perspectives and Experiences Enhancing Access to Healthcare, 2025-02-19

Access to healthcare is a straightforward concept either we can receive high quality healthcare when needed or we cannot While this concept is simple reality is much more complex Many people cannot afford good healthcare even if they have health insurance Others live in areas where vaccines doctors hospitals and other health services are in short supply and these supply constraints continue to grow Still others find it hard to make appointments for care especially if they must travel long distances or miss work to attend those appointments The inability to accommodate patient needs has been problematic for decades and sometimes for much longer in many parts of the world In this book authors from around the globe describe innovative approaches for improving access to health care Their entrepreneurial spirit knowledge and sheer grit in the face of complex challenges are admirable and demonstrable Policymakers healthcare providers payers and patients will find valuable insights and actionable strategies in this volume for addressing access barriers and ensuring timely care Readers are encouraged to explore these and other groundbreaking approaches using the lessons learned here to improve healthcare access and enhance lives worldwide

EHealth Bernd Blobel, Peter Pharow, Michael Nerlich, 2008 Current demographic economic and social conditions which developed countries are faced with require a paradigm change for delivering high quality and efficient health services In that context healthcare systems have to turn from organization centered to process oriented and finally towards individualized patient care also called personal care based on ehealth platform services Interoperability requirements for ubiquitous personalized health services reach beyond current concepts of health information integration among professional stakeholders and related Electronic Patient Records Future personal health platforms particularly have to maintain semantic interoperability among systems using different modalities and technologies different knowledge representation and domain experts languages as well as different coding schemes and terminologies to include home care as well as personal and mobile systems This development is not restricted to regions or countries but appears globally requiring a comprehensive international collaboration This publication within the series Studies in Health Technology and Informatics presents papers from leading international experts representing all domains involved in ehealth

Creating Value with Science and Technology Eliezer Geisler, 2001-08-30 Do science and technology create value for society and the economy and how might one go about measuring it How do we evaluate its benefits Can we even be certain that there are benefits Geisler argues that there are benefits and that they outweigh in value the negative impacts that inevitably accompany them His revolutionary new book goes on to show that they can also be measured and evaluated and in one volume all of the existing knowledge on how to do it is compiled then Geisler's own methods are offered The result is a compelling argument that the value of science and technology in our lives has indeed been positive and that the economic well being of all individuals organizations and nations rests upon them Geisler starts off by describing his conceptual

framework for the evaluation of science and technology and the impact and benefits that proceed from them He discusses the nature of evaluation in general terms and then in the specific context of science technology and innovation together He reviews the state of our present knowledge and assesses the nature of value creation itself Throughout Geisler remains fixed on his driving thesis Although there are certainly some negative impacts from science and technology on the whole the results of its outputs are positive He shows how they have contributed to a range of activities and institutions particularly to the improvement of health and human welfare worldwide Finally after discussing the theories of evaluation he gets down to the practice providing readers with a way to assess science and technological innovations for themselves **Encyclopedia of Disability** Gary L Albrecht,2006 Presents current knowledge of and experience with disability across a wide variety of places conditions and cultures to both the general reader and the specialist Medical Informatics: Concepts, Methodologies, Tools, and Applications Tan, Joseph,2008-09-30 Provides a collection of medical IT research in topics such as clinical knowledge management medical informatics mobile health and service delivery and gene expression
