Telephone Companies In Paradise A Case Study In Telecommunications Deregulation:

Telephone Companies in Paradise Milton L. Mueller, 2023-04-14 Computerization has generated dramatic advances in telecommunications such as mobile telephones and video conferencing. Coupled with this are major changes in regulation as telephone companies face new competitors. States are experimenting with new forms of utility regulation and deregulation in order to cope with the demands of rising competition. Here Mueller examines in detail the results of a radical telephone regulation law. In 1986 the state of Nebraska completely discarded traditional utility regulation, deregulating rates and profits of its local telephone companies. The Nebraska experiment has become a benchmark for reassessing the role of state regulation in the future of telecommunications. Using comparative data from five midwestern states, Mueller shows how deregulation affected rates, investment, infrastructure, modernization, and profits. He uncovers both positive and negative results. Mueller found established telephone companies to be basically conservative, not aggressive and expansionist, and concludes that new competition, not regulation or deregulation, is transforming the telecommunications industry. This book is the first systematic empirical study of the controversial Nebraska law and its broader effects. It will be a significant addition to the much debated issue of telecommunications deregulation. Economists, policymakers, and telecommunications managers will find in this volume a substantial resource. According to Robert Atkinson, senior vice president of Teleport Communications Group, Nebraska's experiences with telecommunications deregulation, the good, the bad, and the ugly, need to be understood by all telecommunications policymakers across the country so that they can emulate Nebraska's successes and avoid its mistakes. Mueller provides the roadmap.

Crandall, Leonard Waverman, 2010-12-01 The rapid pace of technological change is placing the world's telephone companies in a very difficult position Fiber optics cables wireless telephones digital signal compression and sophisticated new switching equipment are lowering the cost of providing service and opening the gates to new competition At the same time these new technologies are providing the telephone companies with a wide array of new market opportunities Unfortunately their status as regulated carriers makes it difficult to exploit these new opportunities and to fend off competitive assaults on their traditional telephone business As long as they are regulated they can be accused of using their monopoly services to cross subsidize new competitive ventures But partial deregulation and open entry would be a catastrophe for them unless they were allowed to revise their rate structure There is a widespread misconception that the U S telecommunications industry has been deregulated and that Canadian authorities are following the U S lead In fact most services remain regulated even though some markets such as long distance services equipment sales and rentals and local services have been opened up This book reviews the recent changes in the structure of U S and Canadian telecommunications industries and the changes in regulatory policy on both sides of the border The authors analyze the effects of these changes in regulation on telephone rates in both the local and long distance markets with particular emphasis on the impacts of regulatory reforms and competition on long distance rates They use their results to suggest how regulation should be structured to allow competition to replace monopoly on the road to the information superhighway The authors contend that for decades misguided regulation of the telephone sector in both Canada and the U S denied consumers the benefits of competition distorted local and long distance telephone rates and blocked en *Principles of Regulatory Policy Design* David Edward Michael Sappington, 1994
