The Logic Of International Relations:

The Logic of International Relations Walter S. Jones, 1985 Beginning with the premise that international relations must be approached from a multinational perspective this text introduces students to the idea that transactions between nations are behavioral rather than structural Building on this perceptual analysis approach the text discusses how the political consciousness of key nations influences international events public opinion and policy choices The Logic of International Relations Steven J. Rosen, Walter S. Jones, 1980-01-01 Logic of International Relations, 5e Jones, 1998-03-21 Inquiry, Logic, and International Politics Benjamin A. Most, Harvey Starr, 2015-09-29 Through the use of logic simulation and empirical data Benjamin A Most and Harvey Starr develop and demonstrate a nuanced and more appropriate conceptualization of explanation in international relations and foreign policy in Inquiry Logic and International Politics They demonstrate that a concern with the logical underpinnings of research raises a series of theoretical conceptual and epistemological issues that must be addressed if theory and research design are to meet the challenges of cumulation in the study of international relations or any area of social science The authors argue for understanding the critical yet subtle interplay of the elements with a research triad composed of theory logic and method *The logic of international relations* Walter S. Rational Theory of International Politics Charles L.

Glaser, 2010-04-26 Within the realist school of international relations a prevailing view holds that the anarchic structure of the international system invariably forces the great powers to seek security at one another's expense dooming even peaceful nations to an unrelenting struggle for power and dominance Rational Theory of International Politics offers a more nuanced alternative to this view one that provides answers to the most fundamental and pressing questions of international relations Why do states sometimes compete and wage war while at other times they cooperate and pursue peace Does competition reflect pressures generated by the anarchic international system or rather states own expansionist goals Are the United States and China on a collision course to war or is continued coexistence possible Is peace in the Middle East even feasible Charles Glaser puts forward a major new theory of international politics that identifies three kinds of variables that influence a state's strategy the state's motives specifically whether it is motivated by security concerns or greed material variables which determine its military capabilities and information variables most importantly what the state knows about its adversary's motives Rational Theory of International Politics demonstrates that variation in motives can be key to the choice of strategy that the international environment sometimes favors cooperation over competition and that information variables can be as important as material variables in determining the strategy a state should choose
