Lectures on the Origin and Growth of Religion as Illustrated by the Religion of Ancient Egypt Peter Le Page Renouf, 1907 **Evolution, Religion, and Cognitive Science** Fraser Watts, Léon P. Turner, 2014-03-20 The cognitive science of religion is an inherently heterogeneous subject incorporating theory and data from anthropology psychology sociology evolutionary biology and philosophy of mind amongst other subjects One increasingly influential area of research in this field is concerned specifically with exploring the relationship between the evolution of the human mind the evolution of culture in general and the origins and subsequent development of religion This research has exerted a strong influence on many areas of religious studies over the last twenty years but for some the so called evolutionary cognitive science of religion

remains a deeply problematic enterprise This book s primary aim is to engage critically and constructively with this complex and diverse body of research from a wide range of perspectives To these ends the book brings together authors from a variety of relevant disciplines in the thorough exploration of many of the key debates in the field These include for example can certain aspects of religion be considered adaptive or are they evolutionary by products Is the evolutionary cognitive science of religion compatible with theism Is the evolutionary cognitive approach compatible with other more traditional approaches to the study of religion To what extent is religion shaped by cultural evolutionary processes Is the evolutionary account of the mind that underpins the evolutionary cognitive approach the best or only available account Written in accessible language with an introductory chapter by Ilkka Pyysiäinen a leading scholar in the field this book is a valuable resource for specialists undergraduate and graduate students and newcomers to the evolutionary cognitive science of religion

What We Are: The Evolutionary Roots of Our Future Lonnie Aarssen, 2022-07-05 Other animals are driven to spend essentially their whole lives just trying to get fed stay alive and get laid That s about it The same was true for our proto human ancestors And modern humans of course also require a Survival Drive and a Sex Drive in order to leave descendants But today we spend most of our lives mainly just trying to convince ourselves that our existence is not absurd In What We Are Queen s University biologist Lonnie Aarssen traces how our biocultural evolution has shaped Homo sapiens into the only creature that refuses to be what it is the only creature preoccupied with a deeply ingrained and absurd sentiment I have a distinct mental life an inner self that exists separately and apart from material life and so unlike the latter need not come to an end This delusion conceivably gave our distant ancestors some wishful thinking for finding some measure of relief from the terrifying uniquely human knowledge of the eventual loss of corporeal survival But this came with an impulsive nagging doubt an obsessive underlying uncertainty self impermanence anxiety Biocultural evolution however was not finished It also gave us two additional uniquely human primal drives both serving to help quell the burden of this anxiety Legacy Drive generates delusional cultural domains for extension of self and Leisure Drive generates pleasurable cultural domains for distraction escape from self Legacy Drive and Leisure Drive Aarssen argues represent two of the most profound consequences of human cognitive and cultural evolution What We Are advances propositions regarding how a visceral susceptibility to self impermanence anxiety has paradoxically played a pivotal role in rewarding the reproductive success of our ancestors and has thus been a driving force in shaping fundamental motivations and cultural norms of modern humans More than any other milestone in the evolution of human minds self impermanence anxiety and its mitigating Drives for Legacy and Leisure account for not just the advance of civilization over the past many thousands of years but also now its impending collapse Effective management of this crisis Aarssen insists will require a deeper and more broadly public

understanding of its Darwinian evolutionary roots as laid out in *What We Are* Teilhard De Chardin and **Eastern Religions** U. M. King, 1977

An Introduction to the Cognitive Science of Religion Claire White, 2021-03-14 In recent decades a new scientific approach to understand explain and predict many features of religion has emerged The cognitive science of religion CSR has amassed research on the forces that shape the tendency for humans to be religious and on what forms belief takes It suggests that religion like language or music naturally emerges in humans with tractable similarities This new approach has profound implications for how we understand religion including why it appears so easily and why people are willing to fight and die for it Yet it is not without its critics and some fear that scholars are explaining the ineffable mystery of religion away or showing that religion is natural proves or disproves the existence of God An Introduction to the Cognitive Science of Religion offers students and general readers an accessible introduction to the approach providing an overview of key findings and the debates that shape it The volume includes a glossary of key terms and each chapter includes suggestions for further thought and further reading as well as chapter summaries highlighting key points This book is an indispensable resource for introductory courses on religion and a much needed option for advanced courses

The Evolution of Religion Bernard Joseph Verkamp, 1995 In the classical meaning of an essay this book is an attempt to try to unify material on religion from a variety of fields into one coherent frame of reference The author obviously does not claim deep expertise in this luxuriance of disciplinary approaches to the field of religion but hopes that his efforts at the very least will inform some and stimulate others to renewed theorizing about their specialties The principal objective of this book then is to show that religion has evolved just like any other cultural entity At the same time the author parts company from the at times premature conclusions of earlier evolutionists of religion and therefore has subtitled the work a re examination The main diversion from such earlier analyses of the evolution of religion as those of Freud and Comte is in the denial that religion can be explained fully in empirical terms as a product of nature or culture The author assumes that for religion to have begun it must have sprung from some ontologically prior event that Christians would refer to as creation and Buddhists as transcendence where ultimate Reality empties itself into the temporal In other words the evolution of religion needs to be understood from a theological perspective At the same time the author is convinced that there is a great deal of empirical evolutionary information available from the natural and social sciences that sheds helpful light on even theologically oriented religious understanding Religion will always be around concludes the author not merely because of the way that it springs up out of human nature but also because of its adaptability It thus may be mankind s one best hope of survival
