**Jung and the Alchemical Imagination** Jeffrey Raff,2000-11-15 Jung and the Alchemical Imagination illustrates the spiritual nature of Jungian psychology and the debt it owes to the tradition of esoteric religion Unlike other books on Jung and alchemy which contain a psychological interpretation of alchemical material this work uses alchemy to understand the three cornerstones of Jungian spirituality the self the transcendent function and active imagination Through the interpretation of alchemical imagery Raff explains the nature of these three concepts and illustrates how together they form a new model of contemporary Western spirituality This book is also unique in selecting alchemical texts for analysis that are relatively unknown and which for the most part have never been interpreted In addition he presents two new concepts the ally and the psychoid realm Through the addition of these ideas and the new understanding that they offer it is possible to apply alchemical imagery to transpsychic experience that is to a world of spirits which may not be reduced to psychological concepts By including this realm in the study of alchemy and Jungian thought it is possible to gain insights into the nature of visionary and ecstatic experiences that form part of the path of individuation the road to completion      The Greco-Egyptian Magical Formularies Christopher Faraone,Sofia Torallas Tovar,2022-11-14 Essays on the magical handbooks of Greco Roman Egypt      Science, Religion and Society Arri Eisen,Gary Laderman,2015-03-04 This unique encyclopedia explores the historical and contemporary controversies between science and religion It is designed to offer multicultural and multi religious views and provide wide ranging perspectives Science Religion and Society covers all aspects of the religion and science dichotomy from humanities to social sciences to natural sciences and includes articles by theologians religion scholars physicians scientists historians and psychologists among others The first section General Overviews contains essays that provide a road map for exploring the major challenges and questions in science and religion Following this the Historical Perspectives section grounds these major questions in the past and demonstrates how they have developed into the six broad areas of contemporary research and discussion that follow These sections Creation the Cosmos and Origins of the Universe

**Unclassical Traditions. Volume II** Christopher Kelly, Richard Flower, Michael Stuart Williams, 2020-06-30 *Unclassical Traditions Volume II Perspectives from East and West in Late Antiquity* is the second of two collections of essays by leading scholars discussing the nature and extent of the late antique engagement with the classical past Rather than concentrating on developments at the centre of empire the focus of a previous volume *Unclassical Traditions I* the aim here is to present a set of views from the margins social political religious literary geographical and linguistic Ranging from Armenian ecclesiastical histories Egyptian alchemy and Jewish power politics across the Mediterranean to the challenges raised by shifting circumstances in 5th century North Africa and Ostrogothic Italy the eight papers in this volume seek to establish the persistent importance of the classical tradition throughout a broadly defined late antiquity Despite the divergent forms taken by these various responses they are united by a common preoccupation with that still authoritative past From these eastern and western perspectives often peripheral and sometimes isolated the classical past appears neither monolithic nor inflexible but as offering a set of assumptions or conventions that might be opposed or accepted subverted or ignored or reworked into a striking variety of newly imagined worlds Like its predecessor this volume will be of interest to anyone concerned with the history literature and culture of the later Roman empire It stems from an international conference held in Cambridge in 2009 generously supported by the Faculty of Classics and the Henry Arthur Thomas Fund

*Laus Platonici Philosophi*, 2011-07-12 This collection of essays honours Marsilio Ficino 1433 1499 as a Platonic philosopher Ficino was not the first translator of Plato in the Renaissance but he was the first to translate the entire corpus of Platonic works and to emphasise their relevance for contemporary readers The present work is divided into two sections the first explores aspects of Ficino's own thought and the sources which he used The second section follows aspects of his influence in the sixteenth and seventeenth centuries The papers presented here deepen and enrich our understanding of Ficino and of the philosophical tradition in which he was working and they offer a new platform for future studies on Ficino and his legacy in Renaissance philosophy Contributors include Unn Irene Aasdalen Constance Blackwell Paul Richard Blum Stephen Clucas Ruth Clydesdale Brian Copenhaver John Dillon Peter J Forshaw James Hankins Hiro Hirai Sarah Klitenic Wear David Leech Letizia Panizza Valery Rees and Stéphane Toussaint

Schneider,2015-10-20 The Pyramid Age represents the first of several highpoints in ancient Egypt's long history. But critical questions remain about the period's social structure and economic organization and the long term implications of its artistic achievements. On the occasion of the fifth anniversary of the Journal of Egyptian History, The University of British Columbia, Harvard University and Brill Academic Publishers, Boston, held a conference at Harvard University on April 26, 2012. A distinguished group of Egyptological scholars from around the world gathered to consider new perspectives on the Pyramid Age; the results are presented here. **A Cultural History of Chemistry in the Early Modern Age** Bruce T.

Moran,2023-12-14 A Cultural History of Chemistry in the Early Modern Age covers the period from 1500 to 1700, tracing chemical debates and practices within their cultural, social, and political contexts. This era in the history of chemistry was notable for natural philosophy, scientific discovery, and experimental method, and also as the high point of European alchemy, exemplified by the immensely popular writings of Paracelsus. Developments in the chemistry of metallurgy, medicine, distillation, and the applied arts encouraged attention to materials and techniques, linking theoretical speculation with practical know-how. Chemistry emerged as an academic discipline supported by educational texts and based in classroom and laboratory instruction, and claimed a public place. The 6-volume set of the Cultural History of Chemistry presents the first comprehensive history from the Bronze Age to today, covering all forms and aspects of chemistry and its ever-changing social context. The themes covered in each volume are theory and concepts, practice and experiment, laboratories and technology, culture and science, society and environment, trade and industry, learning and institutions, art and representation. Bruce T. Moran is Professor of History and University Foundation Professor emeritus at the University of Nevada, Reno, USA. Volume 3 in the Cultural History of Chemistry set. General Editors: Peter J. T. Morris, University College London, UK, and Alan Rocke, Case Western Reserve University, USA. **Fermentation: Vital or Chemical Process?** Joseph Fruton,2006-12-01 Human

knowledge of the conversion of grape must into wine and of cereal dough into bread is as old as agriculture. This book is a study of the ways this phenomenon, fermentation, has been considered since Aristotle to be analogous to natural processes such as human digestion. During 1200-1600 A.D. alchemists wrote ferments or elixirs that could turn lead into gold. A century later, in Newton's time, many physicians and natural philosophers considered fermentation to be an important natural process. The 18th century was marked by Lavoisier's celebrated experiment on alcoholic fermentation. The 19th century debate about the nature of this process was concluded by Buchner's preparation of an active cell-free yeast extract. From 1910-1940 many researchers participated in the identification of the chemical intermediates and catalysts in the multi-enzyme pathway of alcoholic fermentation. Approaching Chaos Lucy Wyatt,2010-01-16 Twenty-first century civilization faces economic, ecological, and spiritual meltdown. To survive this century as civilized people, we need to refer back to a time when city life was in harmony with nature and the wider environment. We cannot dismiss the ancients as primitive when they had a blueprint for civilization that first appeared over 5,000 years ago. Perhaps we should look at the ancient past for solutions.

Along the way sidelights are turned on 1 the occult basis of Western political systems as well as 2 the alchemical basis of much Western philosophy and theology      Embodying Osiris Thom F Cavalli,2013-08-15 The modern Western movement to embrace Eastern spiritual traditions usually stops with India and the Orient Westerners have yet to discover the wisdom that dates back even further to ancient Egypt With a Jungian perspective clinical psychologist Dr Thom F Cavalli plumbs that wisdom through the myth of Osiris the green skinned Egyptian god of vegetation and the Underworld As no one else has done Cavalli draws on Osiris s death and resurrection as a guide to spiritual transformation The myth represents the joining of the conscious and the unconscious the light and the dark life and death and shows how to live our temporal existence in service to and anticipation of eternal life Cavalli sees the ancient art of alchemy which attempted to turn lead into gold as the key The alchemical recipe solve et coagula solution and coagulation encoded in the myth describes the integration of all parts of a person and the method for achieving an experience of immortality in life and eternal life after death The Osiris myth thus provides a model for the contemporary quest for individuation the Jungian term for integrating ego and self body and soul in the process of becoming whole      **Jung and Yoga** Judith Harris,2001 This text looks at the parallels between yoga practice and Jungian analysis focusing on Jung s ideas as experienced through bodywork Previously hidden energy brings psyche and body together uniting them in sacred union that gives birth to a new consciousness
