Apte, 2019-11-06 This book divided in two volumes originates from Techno Societal 2018 the 2nd International Conference on Advanced Technologies for Societal Applications Maharashtra India that brings together faculty members of various engineering colleges to solve Indian regional relevant problems under the guidance of eminent researchers from various reputed organizations The focus is on technologies that help develop and improve society in particular on issues such as the betterment of differently abled people environment impact livelihood rural employment agriculture healthcare energy transport sanitation water education This conference aims to help innovators to share their best practices or products developed to solve specific local problems which in turn may help the other researchers to take inspiration to solve problems

in their region On the other hand technologies proposed by expert researchers may find applications in different regions This offers a multidisciplinary platform for researchers from a broad range of disciplines of Science Engineering and Technology for reporting innovations at different levels

Time Strategies, Innovation, and Environmental Policy Christian Sartorius, Stefan Zundel, 2005-01-01 Timeliness is a particularly relevant issue in the field of innovation and diffusion research This book originates from the observation that innovations are time critical and asks the question when and how do windows of opportunity for new environmental technologies emerge and why do they disappear again By analysing these windows of opportunity and possible time strategies for innovation policies this book represents a highly topical contribution to a front line issue in environmental and innovation research The theoretical framework is applied to well investigated and highly informative case studies to produce an interesting insightful and coherent volume Joseph Huber Martin Luther University Halle Germany This book is the first attempt to systematically introduce the aspect of time into economic and environmental innovation policy The authors demonstrate how windows of opportunity for technological innovations emerge and also explain how they can be identified and effectively exploited Technological innovations are widely considered as an opportunity to realise a double dividend protect the environment and increase profits by introducing a more sustainable technology However intervention by the state is often needed to overcome the competitive disadvantage caused by externalities path dependency and lock in The authors provide extensive evidence that this resistance to technological change is subject to substantial temporal variation They argue that it is economically and politically sensible to identify periods of time in which resistance is weakest and to exploit these windows of opportunity whenever and wherever they occur They also highlight how time strategies for innovation policy can involve the preparation and creation of windows which do not yet exist Throughout the book they use an array of varied and interesting case studies to confirm and illustrate their theoretical findings These address issues such as CFC phase out the lean burn engine versus the catalytic converter ecological alternatives to chemical pesticides and the zero emission vehicle mandate in California By exploring the relationship between time strategies and technological change this book will undoubtedly lead to a more efficient and sustainable innovation policy It will be required reading for academics researchers and policymakers working in the fields of environmental innovation sustainability technology policy and political science
