Frankel, 2012-12-06 Technological change has been recognized as the major contributor to economic growth and has become one of the most important challenges to policy makers and managers Many excellent books and papers have been written on the subject Most of these deal with the macro or micro economic impact of technological change or the technological change process from invention and discovery to innovation development and final maturity as well as ultimate obsolescence of technology This book is designed to present technological change as a decision process and explain the use of recently developed methods for the effective management of technological change In particular techniques for the effective choice among technological alternatives timing of the introduction of new technology both in terms of its own status and that of the technology to be replaced if any and the rate and method of introduction of new technology are presented Management of technology is a complex decision process which is affected by both internal and external factors. The purpose of this book is to instruct the

reader in effective technology deciSion making which involves the evaluation of the status of technology in use if any the problem to be solved or output to be obtained determination of environmental and internal constraints and the competitive environment or market conditions which affect the technology decisions The Metrics of Science and Technology Eliezer Geisler, 2000-08-30 Dr Geisler's far reaching unique book provides an encyclopedic compilation of the key metrics to measure and evaluate the impact of science and technology on academia industry and government Focusing on such items as economic measures patents peer review and other criteria and supported by an extensive review of the literature Dr Geisler gives a thorough analysis of the strengths and weaknesses inherent in metric design and in the use of the specific metrics he cites His book has already received prepublication attention and will prove especially valuable for academics in technology management engineering and science policy industrial R government science and technology policymakers and scientists and managers in government research and technology institutions Geisler maintains that the application of metrics to evaluate science and technology at all levels illustrates the variety of tools we currently possess Each metric has its own unique strengths and weaknesses but overall metrics offer the best possible way to evaluate science and technology He then finds that in general science and technology have a positive effect on the human experience Truly state of the art in the study of the metrics of science and technology their outcomes and contributions to society and the economy the book provides unique analyses of the academic world and its most useful metrics the industrial science technology research and development complex and the government network of laboratories For each Geisler gives a comprehensive analysis of the main metrics and their best applications His book is thus also usable in certain advanced undergraduate and graduate courses and seminars that treat technology and engineering management project management in technology industries and the evaluation of social and economic programs Technical Change and Industrial Transformation Giovanni Dosi,1984-08-16 Technological Change in a Spatial Context Enrico Ciciotti, Neil Alderman, Alfred Thwaites, 2012-12-06 This book represents a selection of contributions to the Regional Science Association European Summer Institute held at Arco Lake of Garda Italy from 17th to 23rd July 1988 on the theme of Theories and policies of technological development at the local level As such it forms a complementary volume to the collection of invited papers entitled The Spatial Context of Technological Development edited by Professors Riccardo Cappellin and Peter Nijk amp and published by Avebury Gower The Summer Institute covered a broad range of themes and contributions from over 100 researchers It has therefore not been our intention to represent or replicate these themes directly but to provide as wide an international coverage of current research in regional science in the field of technological change as possible The papers to be found in this book are drawn from the European Community Eastern Europe Scandinavia North America and elsewhere Inevitably as the book was to be published in English most of the editorial work has been undertaken at the Centre for Urban and Regional Development Studies at Newcastle University In so doing we have attempted to standardize the English as far as possible

whilst trying not to lose the characteristics of the styles of the individual authors International Bibliography of **Economics 1998** Compiled by the British Library of Political and Economic Science, 1999-12-16 Renowned for its international coverage and rigorous selection procedures this series provides the most comprehensive and scholarly bibliographic service available in the social sciences Arranged by topic and indexed by author subject and place name each bibliography lists and annotates the most important works published in its field during the year of 1997 including hard to locate journal articles Each volume also includes a complete list of the periodicals consulted Dynamics of Technological Change Girifalco, 2012-12-06 Technology is not an end in itself but a way of satisfying human wants It shows us how to solve the age old economic problem of surviving and pros pering in a hard world But to optimize the benefits of technological advance requires an understanding of how it happens The purpose of this book is to provide some of that understanding The subject is so enormous and so intertwined with every human activity that a small selection of it and that from a special viewpoint is inevitable. The selection of subject matter has been of course conditioned by what interests me and is somewhat heterogeneous However it is connected by two major themes The first is that it emphasizes the dynamic nature of technology in the sense that it must be approached as a process evolving in time that can often be described in quantitative terms The second is that I have chosen topics that I believe are essential for a strategic sense of how to plan for execute and respond to technological change These two themes complement each other because the strategic sense requires an appreciation of the dynamics and the dynamics naturally lead to a consideration of how to deal with technology so that it can be used to achieve human objectives The unifying thought behind the book is that technological change has a systemic as well as an idiosyncratic aspect Journal of Economic Literature ,1999 Behavioral Norms, Technological Progress, and Economic Dynamics Ernst Helmstädter, Mark Perlman, 1996 Schumpeter was interested in dynamic economics rather than the economics of stagnation in the economics of the creation of wealth rather than the economics of the redistribution of wealth in the economics of technological innovation rather than the economics of industrial management The major thrust of the volume then concerns studies of industrial change with emphasis both on analysis of the impact of innovation and on the interrelatedness of industries viewed through the process of innovation **Principles of Microeconomics: A New-Look Textbook of Microeconomic Theory, 22e** Ahuja H.L., This most popular and proven text takes a further lead with this revision by aligning its contents with the prescribed UGC model curriculum and new Choice Based Credit System CBCS syllabus The book provides carefully tailored content for undergraduate courses in economics across a range of academic disciplines Principles of Microeconomics, 22e Ahuja H.L., 2022 The book makes a comprehensive and analytical study of theories of demand production cost and determination of price and output of products in different market structures It also discusses theory of factor pricing and income distribution as wages rent interest and profits Above all it critically analyses the conditions of economic efficiency and maximum social welfare and causes of market failures It takes a further lead with

this revision by aligning its contents with the prescribed UGC model curriculum and new Choice Based Credit System CBCS **The Origins of Efficiency** Brian Potter, 2025-10-14 An examination of how production processes from penicillin syllabus to steel to semiconductors get more efficient over time and a powerful argument for efficiency as an underrated driver of progress Efficiency is the engine that powers human civilization It's the reason rates of famine have fallen precipitously literacy has risen and humans are living longer healthier lives compared to preindustrial times But where do improvements in production efficiency come from In The Origins of Efficiency Brian Potter argues that improving production efficiency finding ways to produce goods and services in less time with less labor using fewer resources is the force behind some of the biggest and most consequential changes in human history With unprecedented depth and detail Potter examines the fundamental characteristics of a production process and how it can be made less time and resource intensive and therefore less expensive The book is punctuated with examples of production efficiency in practice including how high yield manufacturing methods made penicillin the miracle drug that reduced battlefield infection deaths by 80 percent during World War II the 100 year history of process improvements in incandescent light bulb production and how automakers like Ford Toyota and Tesla developed innovative production methods that transformed not just the automotive industry but manufacturing as a whole He concludes by looking at sectors where production costs haven t fallen and explores how we might harness the mechanisms of production efficiency to change that The Origins of Efficiency is a comprehensive companion for anyone seeking to understand how we arrived at this age of relative abundance and how we can push efficiency improvements further into domains like housing medicine and education where much work is left to be done
