Technological Transformation Of China:

The Technological Transformation of China T. David McDonald, 2002-02-01 For years statesmen and scholars have labored to understand the nature of China Decades after the Long March and the Cultural Revolution China still struggles to accommodate itself to the desires of communism as well as economic and industrial modernization These objectives recent events have shown are not always compatible with each other Nowhere is this more obvious than in Chinas economic plans Since embarking on social and economic reforms largely benefitting agriculture and the cities of the Gold Coast area China has experienced certain consequences of the market place like inflation unemployment and graft And party leaders have learned that modern technology and foreign capital do have an effect on ideological purity Despite new social and economic disparities Chinese leaders hard line and reform alike agree on the Four Modernizations major improvements in defense industry agriculture and science and technology In *The Technological Transformation of China* author David McDonald describes some of the monumental tasks the Chinese face in these areas especially in the current five year plan for science and technology in which the Chinese government can claim some success When Hu Yaobang a long time voice of reform died in April 1989 and massive student demonstrations for democratization took over Tiananmen Square and much of Beijing one of the students said to a Western journalist Every four years you change your government by voting Every decade we have a revolution Revolution or transformation Whatever happens in China including renewed repression is an important part of our future Bradley C Hosmer Lieutenant General U S Air Force President National Defense University

Technological Transformation of China BPI Information Services, DIANE Publishing Company, 1990-01-01 Decades after the Long March and the Cultural Revolution China still struggles to accommodate itself to the desires of communism as well as economic and industrial modernization The author describes some of the monumental tasks the Chinese face in the areas of defense industry agriculture and science and technology Whatever happens in China including renewed repression is an important part of our future Technological Progress and the Transformation of China's Economic Development Mode Wen

Xiao, 2020-10-01 This book explores how technological progress accelerates the transformation of economic development by adopting a fundamental logical approach to technological progress intensive inputs and promotion of productive efficiency to transformation of economic development It investigates the internal mechanisms and the choice of corresponding modes that initiate technological progress to accelerate the transformation of economic development at three basic research levels micro enterprise level mid industry level and macro economy level Based on the above research the book summarizes four dimensions facilitating the transformation agricultural intensification new industrialization modernization of the service industry and the advanced manufacturing industry and linkage of the modern service industry This book is especially valuable in its hierarchical categorization covering theoretical empirical industrial and strategic exploration On one hand it analyzes the mechanisms and approaches influencing the transformation of economic development driven by technological

progress from both theoretical and empirical perspectives On the other hand based on the introduction of advanced international experiences it probes into the guarantee basis for the strategic implementation and the corresponding mode choices of the transformations Furthermore it offers specific policy proposals from both the macro level of how technological progress promotes the transformation of economic development and the micro level covering the agricultural industrial and service industries

Technology and Industrial Transformation of China Yanqing Jiang,Jiewei Gu,2022-10-30 This book explores how China's industrial transformation and development depend on technology and innovation and how considerations about issues associated with technology and innovation may affect China's development strategies Market oriented reforms initiated four decades ago have constantly fueled a high speed of development in China The country's industrial structure has experienced rapid evolution In the meantime especially in the general context of globalization the country has also opened to foreign trade and foreign direct investment transforming itself from a virtually completely closed economy into a major trading nation and the largest developing country destination for foreign direct investment in the world Technology is thought to be one of the key driving forces that shape the transformation of the Chinese economy Owing to different speeds of innovation and technology diffusion uneven development is one major issue in the process of China's industrial transformation under new trends of globalization Substantial disparities across different Chinese regions e.g the gaps in regional industrial development and those in incomes and living standards have been one prominent feature of China and are needless to say closely related to different speeds of innovation and technology diffusion The relationship between technology diffusion innovation and industrial development is an important yet complicated issue that deserves careful study Considerations related to technology and innovation play a crucial role in leading and shaping China's development strategies and routes Sustainable development of China creates strong pressures for continuous transforming upgrading and restructuring of the Chinese economy and in all of these processes innovation and technology diffusion play a fundamental role The book presents to the interested reader facts thoughts models empirical results and discussions that shed light on those issues

China's Four Modernizations Richard Baum,2019-03-13 With the death of Mao Tse tung and the subsequent purge of the Gang of Four

China's new pragmatic leaders have embarked on a crash program of national development known as the Four Modernizations. This program is geared to the primary objective of turning China into a major world economic and military power by the year 2000. In this book, the outgrowth of a major international conference on China's post-Maoist development, ten distinguished analysts examine one of the core issues in China's current modernization drive: the acquisition and use of modern industrial science and technology. The authors address the politics of China's technological modernization, the institutional structure of technological research, the purchase of foreign technology, constraints on technological absorption, the growth potential of China's critical energy sector, and the modernization of China's military establishment. Supplemented with brief commentaries by leading academic, government, and private sector contributors, their chapters provide an in-depth look at the process, problems, and prospects of China's widely heralded technological revolution. *China's Technological Catch-Up Strategy* Michael T. Rock, Michael Toman, 2015-02-09. China's technological catch-up industrial development strategy is leading to lower energy use and less CO₂ emissions in several of China's energy-intensive industries. While this strategy has saved substantial amounts of energy and CO₂, it is not yet sufficient to cap and reduce China's CO₂ emissions.

Dragon in the Air: Transformation of China's Aviation Industry and Air Force, 2013-02-15. *Dragon in the Air: Transformation of China's Aviation Industry and Air Force* is a comprehensive and multidimensional study of the air force and the emerging aviation industry in PRC. The author has made a bold effort to trace the changing character of Chinese Air Force from the time of nationalists and perspicuously hunted down the history by dividing PLAAF into three distinct periods. The first stage from 1949-1979 has been characterized by the early blues of PLAAF under Mao's leadership. Deng then had an overbearing influence in the second stage from 1979-1993, also instrumental in initiating the process of transformation from an ancillary of PLA into an independent arm. The third stage was, however, the defining moment which witnessed the start of modernization of PLAAF under the leadership of Jiang Zemin. The author has very lucidly tried to explain the strong link between modernisation of PLAAF and the emergence of China's aviation industry and therefore divided the book in two parts. While the first part of the book maintains focus on the air force and the process of modernisation, the second part dwells with the evolution of the aviation industry and the changes in the organisation structure. He has pointedly highlighted China's increasing defence spending and growing military capabilities, resulting in China developing new aerial platforms, ballistic missiles, and modern firepower. As a result, China is enhancing strategic power projection by building capabilities to carry out air strikes, reconnaissance, and early warning, and air and missile defence to put together a potent military force by the middle of this century. *Technology, Politics, And Society In China* Rudi Volti, 2019-07-11. This study is the first to summarize the major technological policies implemented in China since 1949 and to place them in their social and historical context. Dr. Volti looks at technological change in China as part of a broader process of economic, political, cultural, and organizational change, focusing primarily on four key areas: agriculture, energy, ground transportation, and medicine and public health. He emphasizes

how technological change has been shaped by political and ideological structures notes how China's unique cultural heritage has affected adoption of technologies developed outside China and assesses China's success in developing technologies appropriate to its specific needs as an economically and politically developing nation. He draws on interviews with technicians engaged in the transfer of technology to China as well as extensive primary source materials.

The Development of China's Information Resource Industry Huiling Feng, Guojun Zhao, Minghui Qian, 2021-09-30

The industrialization of information resources has been a growing trend across the world in recent years especially in China where the information resource industry IRI has expanded exponentially for over more than a decade. While analysing the development conditions of China's IRI this two volume set clearly defines the implications and strategic value of the industry summarizes basic IRI theories and clarifies the history of its development and special regional characteristics within the Chinese context. Drawing on the statistics and measurement of various economic indicators of IRI the authors propose four stages of development a germination period an initial development period a subsequent rapid development period and lastly a steady development period. At the same time the set draws upon various theoretical models such as the Dynamic Resource Triangle model the Information Resource Industrial Symbiosis model the value chain model and the explanation model of information consumption in order to shed light on IRI's elements and the optimization of its management. In addition the authors present the Information Resource Industry Development Index IRIDI to evaluate IRI's development in different provinces and cities across Mainland China and monitor its dynamics from the point of view of industrial value and the external environment. While the set lays a solid theoretical foundation for the growth of China's IRI it will also give international readers a clear picture of China's emerging industries in the current era. As an emerging strategic industry in China the information resource industry IRI has had and will continue to have a growing impact on economic and social development. Focusing on the special characteristics of IRI policies in China this set provides an in depth discussion of the major directions methods and paths of development for IRI policies via a comprehensive analysis of the structural organizational promotional policies and policy instruments of China's IRI. Concentrating on policy instruments the set for the first time provides a systematic all rounded review of China's IRI policies that have been released to date and proposes a China Information Resource Industry Policy Library comprising six types of IRI policy documents organizational information regulatory incentives market and social. The whole contributes to a comprehensive understanding of the application of various IRI policies in China and also supports the decision making behind and building of industrial policies.

Issues in the Technological Development of China's Electronic Sector Anupam Khanna, 1986

Although the electronics industry in China has come a long way since 1949 Chinese authorities acknowledge that it is at least 15-20 years behind the levels of Japan and the U.S necessitating new and improved productive processes as well as new products in the electronics industry. The paper examines China's electronics industry and its scope for development by considering its application to other indigenous industry at what level and by what means development.

Technology transfer to China. , Technological Transformation E.F. Byrne, Joseph C. Pitt, 2012-12-06 The philosophical study of technology has acquired only recently a voice in academic conversation This situation is due in part to the fact that technology obviously impacts on the real world whereas the favored stereotype of philosophy allegedly does not Furthermore in some circles it was assumed that philosophy ought not impinge on the world This bias continues today in the form of a general dismissal of the growing area now referred to as applied philosophy By contrast the academic scrutiny of science has for the most part been accepted as legitimate for some 30 years primarily because it has been conducted in a somewhat ethereal manner This is in part because it was believed that science being pure one could think even philosophically about science without jeopardizing one's intellectual purity Since World War II however practitioners of the metascientific arts have come to acknowledge that science also shows signs of having touched down on numerous occasions in what can only be identified as the real world No longer able to keep this banal truth a secret purists have sought to defuse its import by stressing the difference between pure and applied science and lest science be tainted by contact with the world through its applications they have devoted additional energy to separating applied science somehow from technology
