*The Decentring of the Traditional University* Russell Francis, 2012-08-21 The Decentring of the Traditional University provides a unique perspective on the implications of media change for learning and literacy that allows us to peer into the future of self education Each chapter draws on socio cultural and activity theory to investigate how resourceful students are breaking away from traditional modes of instruction and educating themselves through engagement with a globally interconnected web based participatory culture The argument is developed with reference to the findings of an ethnographic study that focused on university students informal uses of social and participatory media Each chapter draws attention to the shifting locus of agency for regulating and managing learning and describes an emergent genre of learning activity For example Francis explores how students are cultivating and nurturing globally distributed funds of living knowledge that transcend institutional boundaries and describes students learning through serious play in virtually figured worlds that support radically personalised lifelong learning agendas These stories also highlight the challenges and choices learners confront as they struggle to negotiate the faultlines of media convergence and master the new media literacies required to exploit the full potential of Web 2 0 as a learning resource Overall this compelling argument proposes that we are witnessing a period of historic systemic change in the culture of university learning as an emergent web based participatory culture starts to disrupt and displace a top down culture industry model of education that has evolved around the medium of the book As a result Francis argues that we need to re conceive higher education as an identity project in which students work on their projective identities or imagined future selves through engagement with both formal and informal learning activities

retention which are crucial for a functioning democracy the implications of who can be obligated to retain and what to retain the idea that data retention is a form of surveillance and ultimately with all things considered whether this is compatible with the ECHR The work will be an invaluable resource for students academics researchers and policy makers working in the areas of privacy human rights law and surveillance

**The Digital Evolution of an American Identity** C. Kaha Waite, 2013 The Digital Evolution of an American Identity details how the concept of American individualism is challenged by the digital revolution As digital media alter our print dominant culture assumptions regarding the relationship of the individual to the larger community become increasingly problematic Current arguments regarding freedom of speech and confusion about what is meant by privacy illustrate the nature of the challenge C Waite defines individualism as the ways in which the American culture traditionally strives to balance the rights of the individual against the needs of the group Americans struggle to understand what it means to be responsible both for one's self and for the welfare of others They struggle with this not as an academic might but in concrete and specific cases often caught at cross purposes with conflicting goods This is a historic struggle intrinsic to the very fabric of America's democratic society as illustrated by its laws and customs The American democracy has supported a view of the person as an autonomous individual Yet that concept of American individualism no longer adequately captures the role of the self in the social world The digital environment challenges that autonomy by creating new avenues for speech and new forms of social networks Though the transition from a print based culture to the digital domain entails a global revolution American culture will suffer the consequences of that revolution more profoundly than other cultures because the concept of American individualism is foundational to its democratic way of life
