Technology And International Affairs:

Technology and International Affairs Joseph S. Szyliowicz, 1981 *Technology and Agency in International Relations* Marijn Huijtinck, Matthias Leese, 2019-04-23 This book responds to a gap in the literature in International Relations IR by integrating technology more systematically into analyses of global politics Technology facilitates accelerates automates and exercises capabilities that are greater than human abilities And yet within IR the role of technology often remains understudied Building on insights from science and technology studies STS assemblage theory and new materialism this volume asks how international politics are made possible knowable and durable by and through technology The contributors provide empirically rich and pertinent accounts of a variety of technologies relevant to the discipline including drones algorithms satellite imagery border management databases and blockchains Problematizing various technologically mediated issues such as secrecy violence and questions of how authority and evidence become constituted in international contexts this book will be of interest to scholars in IR in particular those who work in the subfields of critical security studies International Political Economy and Global Governance Role of Technology in International Affairs Amitav Mallik, 2016 Recent advances in technology have opened up vast new areas of communication cooperation and even friction among nations in their pursuit of security development and progress Science and technology today transcend almost all areas of international affairs The role of science and technology in international affairs is so intrinsic that it is rarely recognised as a separate entity and often taken for granted The impact of modern dual use technology on human society and national security has become so large that it would be necessary for foreign policy professionals to understand the finer nuances of technology to successfully negotiate international affairs in future The book *Role of Technology in International Affairs* is aimed at bringing a clear appreciation of the various interconnections and interdependencies between technology security foreign policy and diplomacy that future diplomats must have for navigating towards international peace Part I introduces the reader to the changing dimensions of international relations and diplomacy and highlights the interplay between technology and international affairs An India specific perspective is also discussed to bring focus on future challenges for India in the changing globalised world Part II takes the reader through four technology areas of major impact on international affairs New dimensions of outer space and cyber space have emerged as most decisive areas for international peace Climate change is going to be the most challenging area for international negotiation for the future The four chapters endeavour to provide a keen insight on important technology areas Part III is about how best India can integrate science and technology and foreign policy to build its comprehensive national power which will be vital to India positioning itself as a major power for protecting and furthering its national interest in international affairs **Technology and International Relations** Otto Hieronymi, 2015-12-30 **Technology and International Relations** Giampiero Giacomello, Francesco N. Moro, Marco Valigi, 2021-04-30 Exploring how changes in advanced technology deeply affect international politics this book theoretically

engages with the overriding relevance of investments in technological research and the ways in which they directly foster a country's economic and military standing. Scholars and practitioners present important insights on the technical and social issues at the core of technology competition. *Power, Information Technology, and International Relations Theory* D. McCarthy, 2015-02-03 This book examines the internet as a form of power in global politics. Focusing on the United States internet foreign policy, McCarthy combines analyses of global material culture and international relation theory to reconsider how technology is understood as a form of social power. *Science, Technology, and Art in International Relations* J.P. Singh, Madeline Carr, Renée Marlin-Bennett, 2019-03-01 This volume brings together 19 original chapters plus four substantive introductions which collectively provide a unique examination of the issues of science, technology, and art in international relations. The overarching theme of the book links global politics with human interventions in the world. We cannot disconnect how humans act on the world through science, technology, and artistic endeavors from the engagements and practices that together constitute IR. There is science, technology, and even artistry in the conduct of war and in the conduct of peace as well. Scholars and students of international relations are beginning to explore these connections, and the authors of the chapters in this volume from around the world are at the forefront. **Technology and International Relations** John Van Nuys Granger, 1979-01 **Importance of Technology in International Relations** Chukwumaobi J. Adiele, 2006 *Digital International Relations* Corneliu Bjola, Markus Kornprobst, 2023-11-03 This book analyses how digital transformation disrupts established patterns of world politics, moving International Relations (IR) increasingly towards Digital International Relations. This volume examines technological, agential, and ordering processes that explain this fundamental change. The contributors trace how digital disruption changes the international world we live in, ranging from security to economics, from human rights advocacy to deep fakes, and from diplomacy to international law. The book makes two sets of contributions. First, it shows that the ongoing digital revolution profoundly changes every major dimension of international politics. Second, focusing on the interplay of technology, agency, and order, it provides a framework for explaining these changes. The book also provides a map for adjusting the study of international politics to studying International Relations, making a case for upgrading, augmenting, and rewiring the discipline. Theory follows practice in International Relations, but if the discipline wants to be able to meaningfully analyse the present and come up with plausible scenarios for the future, it must not lag too far behind major transformations of the world that it studies. This book facilitates that theoretical journey. This book will be of much interest to students of cyber politics, politics and technology, and International Relations.

International Relations Massachusetts Institute of Technology. International Relations Division, 1947 **Technology and International Relations** Bhaskar Balakrishnan, 2017-09-27 A wide range of science and technology issues have become the subject of international negotiations over the years. Thus, this book focuses on the role of Science and Technology in foreign relations. **Science and Technology in U.S. International Affairs** Rodney W. Nichols, Carnegie Commission on

Science, Technology, and Government,1992 The Global Politics of Science and Technology - Vol. 1 Maximilian Mayer,Mariana Carpes,Ruth Knoblich,2014-08-20 An increasing number of scholars have begun to see science and technology as relevant issues in International Relations IR acknowledging the impact of material elements technical instruments and scientific practices on international security statehood and global governance This two volume collection brings the debate about science and technology to the center of International Relations It shows how integrating science and technology translates into novel analytical frameworks conceptual approaches and empirical puzzles and thereby offers a state of the art review of various methodological and theoretical ways in which sciences and technologies matter for the study of international affairs and world politics The authors not only offer a set of practical examples of research frameworks for experts and students alike but also propose a conceptual space for interdisciplinary learning in order to improve our understanding of the global politics of science and technology This first volume summarizes various time tested approaches for studying the global politics of science and technology from an IR perspective It also provides empirical theoretical and conceptual interventions from geography history innovation studies and science and technology studies that indicate ways to enhance and rearticulate IR approaches In addition several interviews advance possibilities of multi disciplinary collaboration

International Relations and Technological Revolution 4.0 David Hernández Martínez,José Miguel Calvillo Cisneros,2024-10-15 This book analyzes the global implications of the fourth industrial revolution the Technological Revolution 4 0 on International Relations Examining the intersection of new technologies and international power this volume engages in extensive discussions and debates surrounding the immediate and long term consequences of innovations such as artificial intelligence big data virtual reality smart cities and drones The rapid and potent march of technological progress intensifies global curiosity and concern particularly regarding control over these new technologies The book discusses essential questions such as the theoretical analysis of new technologies in international relations their impact on the 21st century world order and the pivotal roles of international actors in this revolution Finally it examines how these new technologies are reshaping international security cooperation and communication A critical resource for researchers and the general public this book provides a contemporary and theoretical framework to contextualize the international discipline in light of the challenge posed by new technologies while also discussing the key variables that mold international society in the 21st century within the parameters of this technological revolution Moreover it anticipates the prominent dynamics and challenges that will shape global structures regions and nations in the forthcoming decades **Global Power Knowledge**
