## **Technology And The Good Life:**

*Technology and the Good Life?* Eric Higgs, Andrew Light, David Strong, 2000-11-15 Can we use technology in the pursuit of a good life or are we doomed to having our lives organized and our priorities set by the demands of machines and systems How can philosophy help us to make technology a servant rather than a master *Technology and the Good Life* uses a careful collective analysis of Albert Borgmann's controversial and influential ideas as a jumping off point from which to address questions such as these about the role and significance of technology in our lives Contributors both sympathetic and critical examine Borgmann's work especially his device paradigm apply his theories to new areas such as film agriculture design and ecological restoration and consider the place of his thought within philosophy and technology studies more generally Because this collection carefully investigates the issues at the heart of how we can take charge of life with technology it will be a landmark work not just for philosophers of technology but for students and scholars in the many disciplines concerned with science and technology studies

**Technology and the Good Life?** Eric Higgs, Andrew Light, David Strong, 2000-11-15 Can we use technology in the pursuit of a good life or are we doomed to having our lives organized and our priorities set by the demands of machines and systems How can philosophy help us to make technology a servant rather than a master *Technology and the Good Life* uses a careful collective analysis of Albert Borgmann's controversial and influential ideas as a jumping off point from which to address questions such as these about the role and significance of technology in our lives Contributors both sympathetic and critical examine Borgmann's work especially his device paradigm apply his theories to new areas such as film agriculture design and ecological restoration and consider the place of his thought within philosophy and technology studies more generally Because this collection carefully investigates the issues at the heart of how we can take charge of life with technology it will be a landmark work not just for philosophers of technology but for students and scholars in the many disciplines concerned with science and technology studies

*Technology and the Virtues* Shannon Vallor, 2016-08-02 The 21st century offers a dizzying array of new technological developments robots smart enough to take white collar jobs social media tools that manage our most important relationships ordinary objects that track record analyze and share every detail of our daily lives and biomedical techniques with the potential to transform and enhance human minds and bodies to an unprecedented degree Emerging technologies are reshaping our habits practices institutions cultures and environments in increasingly rapid complex and unpredictable ways that create profound risks and opportunities for human flourishing on a global scale How can our future be protected in such challenging and uncertain conditions How can we possibly improve the chances that the human family will not only live but live well into the 21st century and beyond This book locates a key to that future in the distant past specifically in the philosophical traditions of virtue ethics developed by classical thinkers from Aristotle and Confucius to the Buddha Each developed a way of seeking the good life that equips human beings with the moral and intellectual character to flourish even in the most unpredictable complex and unstable

situations precisely where we find ourselves today Through an examination of the many risks and opportunities presented by rapidly changing technosocial conditions Vallor makes the case that if we are to have any real hope of securing a future worth wanting then we will need more than just better technologies We will also need better humans Technology and the Virtues develops a practical framework for seeking that goal by means of the deliberate cultivation of technomoral virtues specific skills and strengths of character adapted to the unique challenges of 21st century life that offer the human family our best chance of learning to live wisely and well with emerging technologies

### **The Good Life in a Technological Age**

Philip Brey,Adam Briggie,Edward Spence,2012-05-04 Modern technology has changed the way we live work play communicate fight love and die Yet few works have systematically explored these changes in light of their implications for individual and social welfare How can we conceptualize and evaluate the influence of technology on human well being Bringing together scholars from a cross section of disciplines this volume combines an empirical investigation of technology and its social psychological and political effects and a philosophical analysis and evaluation of the implications of such effects

**Stoic Philosophy and the Control Problem of AI Technology** Edward H. Spence,2021-10-22 To what degree is technology in the form of products and processes capable of contributing human enhancement and wellbeing In cases where the impact of a technology on society is not only very negligible but overall negative and harmful what is technology good for To answer these questions Spence develops and applies a normative model based on rationalist and virtue ethics as well as stoic philosophy Its primary purpose is to determine the essential conditions that any normative theory that seeks to assess the impact of technology on wellbeing must adequately address in order to be able to account for explain and evaluate what contribution if any technology is capable of making to the attainment and enhancement of human wellbeing Through developing this model Spence offers a novel and important examination of the benefit of technology to our society as a whole

*Technology and the Philosophy of Religion* David Lewin,2010-09-13 The last one hundred years has seen unimaginable technological progress transforming every aspect of human life Yet we seem unable to shake a profound unease with the direction of modern technology and its ideological siblings global capitalism and massive consumption Philosophers such as Marcuse Borgmann and especially Heidegger have developed important analyses of technological society however in this book David Lewin argues that their ideas have remained limited either by their secular context or by the narrow conception of religion that they do allow This study guides the reader along the newly formed paths of the philosophy of technology arguing that where those paths come to an abrupt end a religious discourse is needed to articulate the ultimate concerns that drive technological action It calls for a meditation on the central insight of many religious traditions that in an ultimate sense we know not what we do To acknowledge that we know not what we do is the first step towards a theology of technology that draws upon insights from the mystical theological tradition as well as from recent developments in the continental philosophy of religion

**American Philosophy of Technology** Hans Achterhuis,2001 Introduces contemporary American philosophy

of technology through six of its leading figures The six American philosophers of technology whose work is profiled in this clear and concise introduction to the field Albert Borgmann Hubert Dreyfus Andrew Feenberg Donna Haraway Don Ihde and Langdon Winner represent a new empirical direction in the philosophical study of technology that has developed mainly in North America In place of the grand philosophical schemes of the classical generation of European philosophers of technology including Martin Heidegger Jacques Ellul and Hans Jonas the contemporary American generation addresses concrete technological practices and the co evolution of technology and society in modern culture Six Dutch philosophers associated with Twente University survey and critique the full scope and development of their American colleagues work often illustrating shifts from earlier to more recent interests Individual chapters focus on Borgmann's engagement with technology and everyday life Dreyfus's work on the limits of artificial intelligence Feenberg's perspectives on the cultural and social possibilities opened by technologies Haraway's conception of the cyborg and its attendant blurring of boundaries Ihde's explorations of the place of technology in the lifeworld and Winner's fascination with the moral and political implications of modern technologies American Philosophy of Technology offers an insightful and readable introduction to this new and distinctly American philosophical turn Contributors are Hans Achterhuis Philip Brey Ren Munnik Martijntje Smits Pieter Tijmes and Peter Paul Verbeek **Technology and Human Development** Ilse Oosterlaken, 2015-05-15 This book

introduces the capability approach in which wellbeing agency and justice are the core values as a powerful normative lens to examine technology and its role in development This approach attaches central moral importance to individual human capabilities understood as effective opportunities people have to lead the kind of lives they have reason to value The book examines the strengths limitations and versatility of the capability approach when applied to technology and shows the need to supplement it with other approaches in order to deal with the challenges that technology raises The first chapter places the capability approach within the context of broader debates about technology and human development discussing amongst others the appropriate technology movement The middle part then draws on philosophy and ethics of technology in order to deepen our understanding of the relation between technical artefacts and human capabilities arguing that we must simultaneously zoom in on the details of technological design and zoom out to see the broader socio technical embedding of a technology The book examines whether technology is merely a neutral instrument that expands what people can do and be in life or whether technology transfers may also impose certain views of what it means to lead a good life The final chapter examines the capability approach in relation to contemporary debates about ICT for Development ICT4D as the technology domain where the approach has been most extensively applied so far This book is an invaluable read for students in Development Studies and STS as well as policy makers practitioners and engineers looking for an accessible overview of technology and development from the perspective of the capability approach **Doing Philosophy of Technology** Joseph C. Pitt, 2011-03-24 As science becomes more deeply embedded in a complex technological infrastructure has this changed the

relationship between the sciences and the various technologies that support them As our technologies help shrink our world can we restrict our ethical concerns or must we find a way to face the fact that we are now one world What do new forms of architecture say about whom we are Is the design process the new epistemological paradigm The answers to all of these is yes according to Joseph C Pitt VirginiaTech Doing Philosophy of Technology presents an updated and integrated overview of the most important thinking from this prominent philosopher of technology Throughout his career Joseph C Pitt has defended the view that to say anything meaningful about the value of a technology one must know something about that technology and how it functions in the world This starting point leads naturally to a pragmatist philosophical stance since it is the real world consequences of introducing a technology that must be the basis for any further normative judgements In the book we find an extended set of arguments that challenge the idea that there are eternal philosophical issues that transcend the impacts that technologies make on human beings and their world Rather it is claimed that as our technologies transform our world they transform us and the kinds of questions we find important to answer

**Can Science and Technology Save China?** Susan Greenhalgh, Li Zhang, 2020-02-15 Can Science and Technology Save China assesses the intimate connections between science and society in China offering an in depth look at how an array of sciences and technologies are being made how they are interfacing with society and with what effects Focusing on critical domains of daily life the chapters explore how scientists technicians surgeons therapists and other experts create practical knowledges and innovations as well as how ordinary people take them up as they pursue the good life Editors Greenhalgh and Zhang offer a rare up close view of the politics of Chinese science making showing how everyday logics practices and ethics of science medicine and technology are profoundly reshaping contemporary China By foregrounding the notion of governing through science and the contested role of science and technology as instruments of change this timely book addresses important questions regarding what counts as science in China what science and technology can do to transform China as well as their limits and unintended consequences

**Ageing and Technology** Emma Domínguez Rué, Linda Nierling, 2016-01-15 The booming increase of the senior population has become a social phenomenon and a challenge to our societies and technological advances have undoubtedly contributed to improve the lives of elderly citizens in numerous aspects In current debates on technology however the human factor is often largely ignored The ageing individual is rather seen as a malfunctioning machine whose deficiencies must be diagnosed or as a set of limitations to be overcome by means of technological devices This volume aims at focusing on the perspective of human beings deriving from the development and use of technology this change of perspective taking the human being and not technology first may help us to become more sensitive to the ambivalences involved in the interaction between humans and technology as well as to adapt technologies to the people that created the need for its existence thus contributing to improve the quality of life of senior citizens

**Happiness, Technology and Innovation** Gaël Brulé, Francis Munier, 2021-08-27 This book asks what kind of impacts innovations and technology have on subjective well being and happiness It presents the state of the art both in terms of results and theoretical questioning on these topics It proposes a new concept innovation that leads to greater happiness and highlights new research in this area In so doing it addresses a

less researched area in the field of well being research The authors state that notwithstanding the indisputable positive contributions of innovation and technology there are also drawbacks which need equal attention in research This book is of interest to students and researchers of quality of life and well being as well as innovation research The Capability Approach, Technology and Design Ilse Oosterlaken, Jeroen van den Hoven, 2012-03-30 The capability approach of Martha Nussbaum and Amartya Sen places human capabilities at the centre stage of discussions about justice equality development and the quality of life It rejects too much emphasis on mere preference satisfaction or resource provision and highlights the importance of human agency and freedom This approach has already significantly influenced different fields of application such as economics and development studies Only recently have scholars started to explore its relevance for and application to the area of technology and design which can be crucial factors in the expansion of human capabilities How does technology influence human capabilities What difference could a capability approach make to policies and practices of applying ICT in development processes in the South How can we criticize and improve the design of technology from the perspective of the capability approach The authors of this volume explore the implications of the capability approach for technology design and together create the first volume on this emerging topic **Islamic Ethics of Technology** Amana Raquib, 2015-04-10 This book approaches the question of technology from an Islamic ethical perspective The book tries to broaden the scope of the Sharia to deal comprehensively with the ethical questions and dilemmas that arise in the midst of a postmodern technological culture due to the absence of well defined religious ethical ends It looks at the maqasid as a universal ethical theory to be interpreted and applied in the global technological context It weaves the contemporary philosophical analysis of technology within the maqasid discourse and assesses modern technology through the lens of the ultimate aims and purposes of the Sharia It works out the relationship between the various objectives and how they can be developed into an Islamic ethics of technology Following in the recent interest in the objectives of the Sharia the book further expands the scope of the maqasid and carries it further to encompass metaphysical and ethical debates surrounding technology Anyone interested in finding alternatives to the existing technological model will find this book valuable Specifically those interested in Islam and Modern World and how ijihad is being undertaken to tackle contemporary ethical problems will find this book helpful *Ethics, Technology, and Engineering* Ibo van de Poel, Lamber Royakkers, 2011-05-02 Featuring a wide range of international case studies Ethics Technology and Engineering presents a unique and systematic approach for engineering students to deal with the ethical issues that are increasingly inherent in engineering practice Utilizes a systematic approach to ethical case analysis the ethical cycle which features a wide range of real life international case studies including the Challenger Space Shuttle the Herald of Free Enterprise and biofuels Covers a broad range of topics including ethics in design risks responsibility sustainability and emerging technologies Can be used in conjunction with the online ethics tool Agora <http://www.ethicsandtechnology.com> Provides engineering students with a clear introduction
