**Technology Development for Army Unmanned Ground Vehicles** National Research Council, Division on Engineering and Physical Sciences, Board on Army Science and Technology, Committee on Army Unmanned Ground Vehicle Technology, 2003-02-01 Unmanned ground vehicles UGV are expected to play a key role in the Army's Objective Force structure. These UGVs would be used for weapons platforms, logistics carriers, and reconnaissance, surveillance, and target acquisition among other things. To examine aspects of the Army's UGV program, assess technology readiness, and identify key issues in implementing UGV systems among other questions, the Deputy Assistant Secretary of the Army for Research and Technology asked the National Research Council (NRC) to conduct a study of UGV technologies. This report discusses UGV operational requirements, current development efforts, and technology integration and roadmaps to the future. Key recommendations are presented, addressing technical content, time lines, and milestones for the UGV efforts. **Technology**

**Development for Army Unmanned Ground Vehicles**, 2002 [The Quest for Artificial Intelligence](#) Nils J.

Nilsson, 2009-10-30 Artificial intelligence (AI) is a field within computer science that is attempting to build enhanced intelligence into computer systems. This book traces the history of the subject from the early dreams of eighteenth-century and earlier pioneers to the more successful work of today's AI engineers. AI is becoming more and more a part of everyone's life. The technology is already embedded in face recognizing cameras, speech recognition software, Internet search engines, and health care robots among other applications. The book's many diagrams and easy-to-understand descriptions of AI programs will help the casual reader gain an understanding of how these and other AI systems actually work. Its thorough but unobtrusive end-of-chapter notes containing citations to important source materials will be of great use to AI scholars and researchers. This book promises to be the definitive history of a field that has captivated the imaginations of scientists, philosophers, and writers for centuries. *From Automated to Autonomous Driving* Fabian Kröger, 2024-04-01 This book

presents the most important milestones of the research on automated and autonomous driving in the United States, Japan, and Europe throughout five decades (1950-2000). Drawing on sources from the automotive industry, electrical engineering, the robotics and AI domain, and military institutions, it retraces the transition from the guidance cable approach to vehicle-based sensor and vision systems. Giving a detailed overview of the technical concepts, artifacts, research vehicles, and robots, the book presents the transnational engineering efforts that started long before Silicon Valley entered the field. In addition, the book also uniquely details the role of the military in the domain of vehicle automation. This all ensures the book is of great interest to historians of technology, practitioners in engineering disciplines, scholars working in mobility studies, journalists, and political decision makers. *The Rise of Unmanned Warfare* Jacquelyn Schneider, MacDonald, 2023-12-15 What explains the current US arsenal of unmanned systems? Why, for example, is the contemporary arsenal dominated by aerial unmanned systems versus the munitions that dominated earlier developments? This book challenges traditional explanations for the

proliferation of unmanned systems which focus on capacity or structure. Instead, this book argues that beliefs and identities shape the structures and capacities we choose when we are investing in weapon systems. In particular, it traces beliefs about technological determinism and military revolutions, force protection and casualty aversion, and service identities to explain why the US has invested so heavily in remote controlled unmanned aerial platforms over the last three decades. In doing so, the book illustrates how ideas become influence and ultimately manifest in budget lines detailing the policy entrepreneurs' critical junctures and path dependencies that shape the lifecycle of beliefs about unmanned weapon systems. The book begins by providing a historical overview of US unmanned systems investments, taking an expansive view of unmanned technologies from land mines to missiles and drones from the revolutionary war to contemporary investments. It then leans on theories of norms, ideas, and influence to detail the role of the Office of Net Assessment, Vietnam 9/11, and armed service identity in building the US current unmanned arsenal. Finally, it concludes with what this case of unmanned technologies reveals about US support to Ukraine, as well as contemporary weapons debates about cyber information technology, space, and hypersonic missiles.

The book is directed to the application engineers, research students, professors, decision makers, and scientists/engineers working in defence and related areas.

**Technology for Small Spacecraft** National Research Council, Division on Engineering and Physical Sciences, Commission on Engineering and Technical Systems, Panel on Small Spacecraft Technology, 1994-02-01. This book reviews the US National Aeronautics and Space Administration's NASA small spacecraft technology development. Included are assessments of NASA's technology priorities for relevance to small spacecraft and identification of technology gaps and overlaps. The volume also examines the small spacecraft technology programs of other government agencies and assesses technology efforts in industry.

Unmanned Ground Vehicle Technology, 2005. *Reducing the Logistics Burden for the Army After Next* National Research Council, Division on Engineering and Physical Sciences, Commission on Engineering and Technical Systems, Committee to Perform a Technology Assessment Focused on Logistics Support Requirements for Future Army Combat Systems, 1999-04-22. This study assesses the potential of new technology to reduce logistics support requirements for future Army combat systems. It describes and recommends areas of research and technology development in which the Army should invest now to field systems that will reduce logistics burdens and provide desired capabilities for an Army After Next.
