The Challenge of New Technology to Labor-management Relations United States. Department of Labor. Bureau of Labor-Management Relations and Cooperative Programs, 1989 **The Falling Rate of Profit in the Postwar United States Economy** Fred Moseley, 1991-06-18 Presents an empirical test of Marx's theory of the falling rate of profit by deriving estimates of the Marxian rate of profit and its determinants for the post World War II US economy in order to determine whether the trends in these variables were in the directions predicted by Marx's theory *New Technologies and the Employment of Disabled Persons* International Labour Office, 1992 Many disabled persons have benefitted in recent years from the development of new access and process technologies This book examines how such technologies help these people to enter and to make progress in the job market and also includes case studies from various countries Resources in Education , 1990-04 Competitive Manufacturing Stuart A. Rosenfeld, 2017-07-12 Stuart A Rosenfeld presents a timely analysis of the problems the United States and other industrialized countries face as they adjust from economies based on natural resources and goods to economies based on quality of human resources and high performance market oriented organizations Some of the questions raised include Will American industry successfully face the competitive challenge of the global economy Can US manufacturing raise productivity and innovate enough to remain healthy Have the latest advances in process technology and management practice penetrated the rural industrial base How can public policy help improve the competitiveness of the crucial manufacturing sector This book challenges the conventional wisdom in economic development policy Past state and local industrial policy focused on locational decisions not on issues of competitiveness Building the competitive advantage of industry is more important than promoting the competitive advantages of location Incentives to modernize are more important than subsidies to locate Competitive Manufacturing uses the rural South the most industrialized rural region of the nation to examine the strengths and weaknesses of manufacturing as the basis for economic growth Using historical analysis surveys and intensive case studies the author analyzes the technological capabilities of rural

manufacturing the factors that influence the decision to modernize and the effects of technology on education and work Comparative studies in Denmark and Italy point to new directions for US economic development policy

Committee on Science,1998 *Social Issues in Computing* Chuck Huff,Thomas Finholt,1994 **The Second Machine Age: Work, Progress, and Prosperity in a Time of Brilliant Technologies** Erik Brynjolfsson,Andrew McAfee,2014-01-20 A New York Times Bestseller A fascinating Thomas L Friedman New York Times look at how digital technology is transforming our work and our lives In recent years Google s autonomous cars have logged thousands of miles on American highways and IBM s Watson trounced the best human Jeopardy players Digital technologies with hardware software and networks at their core will in the near future diagnose diseases more accurately than doctors can apply enormous data sets to transform retailing and accomplish many tasks once considered uniquely human In The Second Machine Age MIT s Erik Brynjolfsson and Andrew McAfee two thinkers at the forefront of their field reveal the forces driving the reinvention of our lives and our economy As the full impact of digital technologies is felt we will realize immense bounty in the form of dazzling personal technology advanced infrastructure and near boundless access to the cultural items that enrich our lives Amid this bounty will also be wrenching change Professions of all kinds from lawyers to truck drivers will be forever upended Companies will be forced to transform or die Recent economic indicators reflect this shift fewer people are working and wages are falling even as productivity and profits soar Drawing on years of research and up to the minute trends Brynjolfsson and McAfee identify the best strategies for survival and offer a new path to prosperity These include revamping education so that it prepares people for the next economy instead of the last one designing new collaborations that pair brute processing power with human ingenuity and embracing policies that make sense in a radically transformed landscape A fundamentally optimistic book The Second Machine Age alters how we think about issues of technological societal and economic progress *The Changing American Countryside* Emery N. Castle,1995 The literature on rural America to the extent that it exists has largely been written by urban based scholars perpetuating out of date notions and stereotypes or by those who see little difference between rural and agricultural concerns As a result the real rural America remains much misunderstood neglected or ignored by scholars and policymakers alike In response Emery Castle offers The Changing American Countryside a volume that will forever change how we look at this important subject

Castle brings together the writings of eminent scholars from several disciplines and varying backgrounds to take a fresh and comprehensive look at the forgotten hinterlands. These authors examine the role of non metropolitan people and places in the economic life of our nation and cover such diverse issues as poverty industry the environment education family social problems ethnicity race religion gender government public policy and regional diversity. The authors are especially effective in demonstrating why rural America is so much more than just agriculture. It is in fact highly diverse complex and interdependent with urban America and the international market place. Most major rural problems they contend simply cannot be effectively addressed in isolation from their urban and international connections. To do so is misguided and even hazardous when one fourth of our population and ninety seven per cent of our land area is rural. Together these writings not only provide a new and more realistic view of rural life and public policy but also suggest how the field of rural studies can greatly enrich our understanding of national life.

Innovation and Employment Charles Edquist,Leif Hommen, Maureen D. McKelvey,2001-01-01 This book is an important addition to what can be broadly referred to as the national systems of innovation NSI approach. The particular contribution of the book is in the examination of the employment effects of innovation something only indirectly considered hitherto. It is a thorough integration of existing knowledge on the key employment implications of innovation. Rachel Parker Labour and Industry This is a highly readable non technical book a highly clear and well argued book that should be useful for policymakers and higher education alike. It brings together much of the most recent and useful literature in the area of innovation employment and related public policy. It is an opportune addition to the existing documentation on the subject. Journal of Economics Zeitschrift f r National konomie Which kinds of growth lead to increased employment and which do not. This is one of the questions that this important volume attempts to answer. The book explores the complex relationships between innovation growth and employment that are vital for both research into and policy for the creation of jobs. Politicians claiming that more rapid growth would remedy unemployment do not usually specify what kind of growth is meant. Is it for example economic GDP or productivity growth. Growing concern over jobless growth requires both policymakers and researchers to make such distinctions and to clarify their employment implications. The authors initially address their theoretical approach to and conceptualization of innovation and employment where the distinction between process and product innovations and between high tech and low tech goods and services are central. They go on to address the relationship between innovation and employment using empirical material to analyse the effects that different kinds of innovations have upon job creation and destruction. Finally the volume summarizes the findings and addresses conclusions as well as policy implications. This book will be of great interest to those involved in research and policy in the fields of macroeconomics economic growth and employment industrial economics and innovation.
