Technology And Growth:

Technology and the Pursuit of Economic Growth David C. Mowery, Nathan Rosenberg, 1991-07-26 Technology's contribution to economic growth and competitiveness has been the subject of vigorous debate in recent years. This book demonstrates the importance of a historical perspective in understanding the role of technological innovation in the economy. The authors examine key episodes and institutions in the development of the U.S. research system and in the development of the research systems of other industrial economies. They argue that the large potential contributions of economics to the understanding of technology and economic growth have been constrained by the narrow theoretical framework employed within neoclassical economics. A richer framework, they believe, will support a more fruitful dialogue among economists, policymakers, and managers on the organization of public and private institutions for innovation. David Mowery is Associate Professor of Business and Public Policy at the School of Business Administration, University of California, Berkeley. Nathan S. Rosenberg is Fairleigh Dickinson Professor of Economics at Stanford University. He is the author of *Inside the Black Box: Technology and Economics* (CUP, 1983).

Growth Policy in the Age of High Technology Jurgen Schmandt, Robert Hines Wilson, 1990 Filling a gap in the urban and regional literature, this book provides a detailed account of the recent initiatives of U.S. state governments with science and technology programs designed to foster economic growth.

High-Technology Development in Regional Economic Growth Byung-Rok Choi, 2019-06-04 This title was first published in 2003. Korea has had considerable success in developing its high technology industries, and these have become significant employers in this region. By analysing the situation in Korea, this book explores the effects of dynamic externalities on the growth of regional employment in the high technology industries. It puts forward innovative simultaneous equation models to test three sets of hypotheses related to so-called Jacobs and MAR effects, differentiated by firm size, organizational type, and product. Clear evidence is found for endogenous technological progress, marked by positive feedback, especially for small firms in diversified high technology enclaves. There are technological externalities associated with knowledge spillovers, and local employment has indirect effects on employment growth via dynamic externalities. The implications for local economic development policy are outlined in a concluding section.

The Politics of High Tech Growth Sean O'Riain, 2004-04-26 This book argues that beneath the Irish trade and foreign investment boom lies a more interesting story of regional innovation promoted by an alliance between the state and local technical communities. This alliance was governed through a decentralized set of state institutions drawing on global and local economic and political resources. This Developmental Network State has had a significant impact on the growth of Ireland's high tech cluster and is central to the emergence of an international network of global high tech regions, from Silicon Valley to Ireland, Taiwan, and Israel. The book provides a detailed study of the rise of the software industry in Ireland and of the state institutions and political conditions which promoted it. It shows how new network state policies and

institutions have been central to high tech regions elsewhere **Technology and Employment** Richard Michael Cyert, David C. Mowery, Committee on Science, Engineering, and Public Policy (U.S.). Panel on Technology and Employment, 1987 This report addresses a number of issues that have surfaced in the debates over the impact of technological change on employment These issues include the effects of technological change on levels of employment and unemployment within the economy on the displacement of workers in specific industries or sectors of the economy on skill requirements on the welfare of women minorities and labor force entrants in a technologically transformed economy and on the organization of the firm and the workplace It concludes that technological change will contribute significantly to growth in employment opportunities and wages although workers in specific occupations and industries may have to move among jobs and careers Recommends initiatives and options to assist workers in making such transitions ISBN 0 309 03744 1 pbk
