Smith,2013-03-01 The Aztecs brings to life one of the best known indigenous civilizations of the Americas in a vivid comprehensive account of the ancient Aztecs A thorough examination of Aztec origins and civilization including religion science and thought Incorporates the latest archaeological excavations and research into explanations of the Spanish conquest and the continuity of Aztec culture in Central Mexico Expanded coverage includes key topics such as writing music royal tombs and Aztec predictions of the end of the world **Time, History, and Belief in Aztec and Colonial Mexico** Ross Hassig,2013-12-18 This illuminating study offers a radical new understanding of how the Aztecs and other Mesoamerican societies conceived of time and history Based on their enormously complex calendars that recorded cycles of many kinds the Aztecs and other ancient Mesoamerican civilizations are generally believed to have had a cyclical rather than linear conception of time and history This boldly revisionist book challenges that understanding Ross Hassig offers convincing evidence that for the Aztecs time was predominantly linear that it was manipulated by the state as a means of controlling a dispersed tribute empire and that the Conquest cut off state control and severed the unity of the calendar leaving only the lesser cycles From these he asserts we have inadequately reconstructed the pre Columbian calendar and so misunderstood the Aztec conception of time and history Hassig first presents the traditional explanation of the Aztec calendrical system and its ideological functions and then marshals contrary evidence to argue that the Aztec elite deliberately used calendars and timekeeping to achieve practical political ends He further traces how the Conquest played out in the temporal realm as Spanish conceptions of time partially displaced the Aztec ones **Technology and the Growth of Civilization** Giancarlo Genta,Paolo Riberi,2019-09-05 Our natural world has been irretrievably altered by humans for humans From domesticated wheat fields to nuclear power plants and spacecraft everything we see and interact with has in some way been changed by the presence of our species starting

from the Neolithic era so many centuries ago This book provides a crash course on the issues and debates surrounding technology s shifting place in our society It covers the history of our increasingly black box world which some theorize will end with technology accelerating beyond our understanding At the same time it analyzes competing trends and theories the lack of scientific knowledge of large sections of the population the dogmas of pseudoscience and the growing suspicion of science and technology which may inevitably lead to scientific stagnation What will the future of our civilization look like How soon might scientific acceleration or stagnation arrive at our doorstep and just how radically will such technological shifts change our culture These are issues that we must address now to insure our future goes the way we choose **Time,**

agent in society focusing on societal roots rather than technology as an autonomous self-perpetuating phenomenon. With rare exceptions, technology is developed in response to societal needs that have evolutionary roots and causes. In our genus *Homo*, language evolved in response to a need for our ancestors to communicate both in the moment and to posterity. A band of hunters had no chance in competition with predators that were larger and faster without this type of organization, which eventually gave birth to writing and music. The steam engine did not leap fully formed from the brain of James Watt. It evolved from a need to pump water out of coal mines, driven by a need to burn coal instead of firewood in turn due to deforestation. Later, the steam engine made machines and mechanization possible. Even quite simple machines increased human productivity by a factor of hundreds if not thousands. That was the Industrial Revolution. If we count electricity and the automobile as a second industrial revolution and the digital computer as the beginning of a third, the world is now on the cusp of a fourth revolution led by microbiology. These industrial revolutions have benefited many in the short term but devastated the Earth's ecosystems. Can technology save the human race from the catastrophic consequences of its past success? That is the question this book will try to answer.

Aztec Time Amelia Khatri, AI, 2025-03-04 *Aztec Time* explores how the Aztec civilization meticulously tracked time using a dual calendar system deeply entwined with their religious observances and agricultural practices. This system comprised of the 365-day solar *Xiuhpohualli* and the 260-day ritual *Tonalpohualli* dictated not only the timing of ceremonies but also agricultural cycles and even warfare. The Aztecs' sophisticated timekeeping provides a window into their worldview, showcasing their ability to integrate spiritual beliefs with practical necessities. The book uniquely examines the Aztec calendar as more than just a timekeeping device, presenting it as a framework that structured their entire society and reflected their relationship with the natural world. For instance, the convergence of the two calendars every 52 years marked a period of great cosmological significance. Using archaeological findings, ethnohistorical accounts, and archaeoastronomy, *Aztec Time* presents a comprehensive overview, beginning with the components of the calendar and progressing through its religious significance, influence on social hierarchies, and its broader legacy in Mesoamerican studies. The arguments are supported by diverse evidence, offering insights into ancient cultures and the development of complex systems of knowledge. By understanding the Aztec calendar, readers gain a deeper appreciation for how this Mesoamerican civilization shaped its world.

The idea of having more output with less input is based on production info and technologies. Production volume, the rise of motivation, are based on labor force, and therefore they are all accepted as indicators of economic growth. Capital accumulation, technological developments, and increase in labor force constitute the main dynamics of growth of the global world economy.
