of Pegmatites in an Ensialic Orogen Harald G. Dill, 2015-10-15 This book will broaden readers understanding of pegmatites in a special geodynamic setting dealing with the emplacement of the Hagendorf Pleystein Pegmatite Province HPPP in the Central European Variscides This treatise illustrates the complex processes leading to the formation and partial destruction of the pegmatites documenting the geochronological chemical mineralogical geological and geomorphological sedimentological data set The book starts with a detailed account of the economic geology of the various pegmatites explaining why these deposits are a major resource of ceramic raw materials In its concluding section a model of the pegmatite evolution in an ensialic orogen provides meaningful insights into the genetic aspects of pegmatite generation The Late Paleozoic rare element pegmatites of the HPPP Oberpfalz SE Germany rank among the largest concentrations in Europe The biggest pegmatite of this mining district totals 4 4 million tons of ore Hagendorf South The mining history of the HPPP is restricted to the 20th century when local entrepreneurs started mining operations in search of ceramic raw materials feldspar and quartz Today the Silbergrube Aplite is still worked for feldspar The traditional mining of pegmatitic and aplitic rocks in Central Europe such as the Bohemian Massif which is shared by Germany the Czech Republic Poland and Austria has been focused on these industrial minerals In addition to these major commodities lithium was mined for a period of time But even today many of these pegmatites of calc alkaline affiliation have not lost their appeal to mineralogists and mineral enthusiasts for their wealth of minerals that contain P Nb Ta Li Be B U Th Sc Ti and Sn The most favorable crustal section to bring about pegmatitic rocks of this type encompassing pegmatoids metapegmatites reactivated pseudopegmatites and pegmatites sensu stricto is the ensialic orogen exemplified by the Variscan Hercynian Orogen which geodynamically connects the Paleozoic pegmatite provinces in North America and Europe The geological history of the HPPP however goes much further than the Carboniferous Permian magmatic activity when the last structural disturbances of the Variscan orogeny affected the NE Bavarian Basement between 450 and 330 Ma During this time mafic magmatic rocks together with calcareous and arenaceous sediments were converted into paragneisses calcsilicate rocks and amphibolites It is the period of time when tectonic shortening led to over thrusting and when the emplacement of nappes and the architectural elements of the ensialic orogen began taking shape During the Late Permian the Mesozoic and the Cenozoic the HPPP did not lie idle in geological terms hypogene and supergene alteration continued and found its most recent expression in alluvial fluvial nigrine placer deposits which resulted from the unroofing of the pegmatites and aplites in the HPPP and can be used even outside HPPP as an ore guide to pegmatites *Czechoslovak Geology and Global Tectonics* Michal Mahel', P. Reichwalder, 1979

Izvestiya Akademii Nauk SSSR. Akademii nauk SSSR., 1962 Geology of the Carpathian Region G. Z. Földvay, 1988 This can be best described as a comprehensive volume as there is no one volume of work done on the geology of the entire Carpathian region It is aimed to pave the way for global geologists to examine this tectonically complex and key area and to build up a clear picture about its origin evolution and structure It provides factual geological material for plate tectonicians

to work on and to derive basic information from Since it is intended to be comprehensive it will also be a useful source material for professional geologists and specialists in the earth sciences

Pre-Permian Geology of Central and Eastern Europe R.D. Dallmeyer, W. Franke, K. Weber, 2013-06-29 In August 1990 Project 233 of the International Geological Correlation Program hosted an international conference in Göttingen Giessen Germany Discussions were focused on the Tectonothermal and Stratigraphic Evolution of the Central European Orogens The meeting marked the first opportunity for completely open scientific exchange following the recent political reformations in central Europe This exciting new atmosphere of international cooperation resulted in presentation of a wealth of information which was new to scientists from both sides of former political boundaries It was apparent that a unique opportunity was available to prepare a systematic overview in a volume dealing with the geology of Central Europe The present book represents an outgrowth of this conference but is not merely a compilation of the papers presented in Göttingen Giessen Instead it represents a coordinated volume designed to present a balanced comprehensive view of our present understanding of the tectonothermal and stratigraphic evolution of the Central European orogens We gratefully acknowledge the help of the national funding agencies who have financed much of the research work summarized in this book and of the International Geological Correlation Programme IGCP project no 233 which provided and helped to finance the organisational framework We are indebted to Springer Verlag for thorough copy editing and production of this book and we sincerely appreciate the efforts of all the reviewers whose comments have greatly helped to improve the quality of this volume We also thank the various contributors for their diligence and perseverance in manuscript preparation

Robertson, Demosthenis Mountrakis, 2006 The Eastern Mediterranean region is a classic area for the study of tectonic processes and settings related to the development of the Tethyan orogenic belt The present set of research and synthesis papers by earth scientists from countries in this region and others provides an up to date interdisciplinary overview of the tectonic development of the Eastern Mediterranean region from Precambrian to Recent Key topics include continental rifting ophiolite genesis and emplacement continental collision extensional tectonics crustal exhumation and intra plate deformation e g active faulting Alternative tectonic reconstructions of the Tethyan orogen are presented and discussed with important implications for other regions of the world The book will be an essential source of information and interpretation for academic researchers geologists and geophysicists advanced undergraduates and also for industry professionals including those concerned with hydrocarbons minerals and geological hazards e g earthquakes
