[Telecommunications and Empire](#) Jill Hills,2023-12-11 Jill Hills picks up from her pathbreaking study *The Struggle for Control of Global Communication The Formative Century* to continue her examination of the political technological and economic forces at work in the global telecommunications market from World War II to the World Trade Organization agreement of 1997 In the late twentieth century focus shifted from the creation and development of global communication markets to their intense regulation The historical framework behind this control where the market was regulated by what institution controlled by what power and to whose benefit masterfully complements Hills's analysis of power relations within the global communications arena Hills documents attempts by governments to direct replace and bypass international telecommunications institutions As she shows the results have offered indirect control over foreign domestic markets government management of private corporations and government protection of its own domestic communication market Hills reveals that the motivation behind these powerful regulatory efforts on person to person communication lies in the unmatched importance of communication in the world economy As ownership of communications infrastructure becomes more valuable governments have scrambled to shape international guidelines Hills provides insight into struggles between U S policymakers and the rest of the world illustrating the conflict between a growing telecommunications empire and sovereign states that are free to implement policy changes Freshly detailing the interplay between U S federal regulation and economic power Hills fosters a deep understanding of contemporary systems of power in global communications

**Building Telecom Markets** Whasun Jho,2013-08-27 The mobile telecommunication industry has been one of the fastest growing industries in the global economy since the late 1990s As the first country to offer commercial Code Division Multiple Access CDMA cellular service in the world Korea was able to jump right into the digital mobile markets enhancing its status as a leading manufacturer of mobile equipment While the growth of the telecom industry occurred with the emergence of worldwide market oriented regulatory reform and liberalization in telecommunications the state market relationship in Korea evolved from state monopoly toward centralized governance and later toward flexible governance which is substantially

different from liberal governance of the US This book examines the uniqueness of Korean regulatory reforms of the mobile telecommunication sector and argues that the market oriented regulatory reform and liberalization should be explained by focusing on the interactions among the state the private sector and international political economic environment It will appeal to scholars and policy makers alike concerned with market regulation Asian development and political economy

**The Telecoms Trade War** Mark Naftel, Lawrence J Spiwak, 2001-01-15 If one were to believe the politicians and pundits in the trade press the world is in midst of a telecoms revolution resulting from the deregulation and new competitive opportunities represented by the 1997 World Trade Organisation Agreement on Basic Telecommunications Services This may be true Unfortunately however the actions of many regulators and industry participants more accurately reveal not a telecoms revolution but instead a growing telecoms trade war that is dangerously close to spiralling out of hand In this book Naftel and Spiwak review U S and European competition and regulatory initiatives post WTO and provide both a useful roadmap to today s U S EU and WTO telecoms regulation and an examination of various case studies to illustrate their points In so doing the authors discover unfortunately the sad reality that despite the political rhetoric regulators on both sides of the Atlantic have eschewed innovative and indeed productive solutions to create a market structure conducive to long term competitive rivalry Instead the authors demonstrate that current policies reveal a growing cynicism towards the maximisation of consumer welfare that will be difficult if not outright impossible to remove Telecommunications Network
