Telecommunications in Turmoil Gerald R. Faulhaber, 1987 *The Liberalisation of the Telecommunications Sector in Sub-Saharan Africa and Fostering Competition in Telecommunications Services Markets* Rachel Alemu, 2018-02-02 This study investigates whether the existing regulatory framework governing the telecommunications sector in countries in Sub-Saharan Africa effectively deals with emerging competition related concerns in the liberalised sector Using Uganda as a case study it analyses the relevant provisions of the law governing competition in the telecommunications sector and presents three key findings Firstly while there is comprehensive legislation on interconnection and spectrum management inefficient enforcement of the legislation has perpetuated concerns surrounding spectrum scarcity and interconnection Secondly the legislative framework governing anti competitive behaviour though in line with the established principles of competition law is not sufficient Specifically the framework is not equipped to govern the conduct of multinational telecommunications groups that have a strong presence in the telecommunications sector Major factors hampering efficient competition regulation include Uganda's sole reliance on sector specific competition rules restricted available remedies and a regulator with limited experience of enforcing competition legislation The weaknesses in the framework strongly suggest the need to adopt an economy wide competition law Lastly wireless technology is the main means through which the population in Uganda accesses telecommunications services Greater emphasis should be placed on regulating conduct in the wireless communications markets *Telecommunications Update* , 1987 [The Froehlich/Kent Encyclopedia of Telecommunications](#) Fritz E. The Gordian Knot W. Russell Neuman, Richard Jay Solomon, Lee W. McKnight, 1999-07-26 Veterans of the high definition TV wars of the 1980s the authors social scientists as well as technologists came to see themselves as chroniclers and students of an intriguing and serious techno economic conflict Why they asked did so few understand the rules of the game In a broad account accessible to generalist and specialist alike they address the current national debate about the development of a national information infrastructure locating the debate in a broad historical narrative that illuminates how we got here and where we may be going and outlining a bold vision of an open communications infrastructure that will cut through the political gridlock that threatens this information highway Technical change the authors argue is creating a new paradigm that fits neither the free market nor regulatory control models currently in play They detail what is wrong with the political process of the national information infrastructure policy making and assess how different media systems telecommunications radio television broadcasting were originally established spelling out the technological assumptions and organizational interests on which they were based and showing why the old policy models are now breaking down The new digital networks are not analogous to railways and highways or their electronic forebears in telephony and broadcasting they are inherently unfriendly to centralized control of any sort so the old traditions of common carriage and public trustee regulation and regulatory gamesmanship no longer apply The authors technological and historical analysis leads logically toward a policy proposal for a reformed regulatory structure that builds and protects meaningful competition but that abandons its role as arbiter of tariffs and definer of public service and public interest
