Intelligent Agents for Telecommunications Applications Sahin Albayrak, 1998 Intelligent agent and distributed AI DAI approaches attach specific conditions to cooperative exchanges between intelligent systems that go far beyond simple functional interoperability Ideally systems that pursue local or global goals coordinate their actions share knowledge and resolve conflicts during their interactions within groups of similar or dissimilar agents can be viewed as cooperative coarse grained systems The infrastructure of telecommunications is a world in transition There are a number of trends that contribute to this convergence of traditional telephony and data network worlds blurring of boundaries between public and private networks complementary evolution of wireline wireless and cable network infrastructures the emergence of integrated broadband multimedia networks and of course the information superhighway Up to now despite the effort that has gone into this area the field of intelligent agents research has not yet led to many fielded systems Telecommunications

applications pose strong requirements to agents such as reliability real time performance openness security management and other integrated management and mobility In order to fulfil their promise intelligent agents need to be fully dependable and typically require an integrated set of capabilities This is the challenge that exists for intelligent agents technology in this application domain

Planning and Architectural Design of Integrated Services Digital Networks A. Nejat Ince,Dag Wilhelmsen,Bülent Sankur,2012-12-06 Planning and Architectural Design of Integrated Services Digital Networks Civil and Military Applications provides a comprehensive treatment of ISDNs how to plan and design them architecturally and how to implement them so that they meet certain given user requirements ranging from a variety of service demands to transmission performance security reliability availability capability for growth interoperability with other ISDN and non ISDN networks and of course cost The book concentrates on the application of ISDN concepts and standards to the planning and design of real costed networks to meet certain specified user requirements Where there are multiple options considerations and rationale on the choice of network aspects and standards are discussed The unique feature of the book compared with other books on ISDN is that it expounds an original methodology which starts from an assumed or given set of complete user requirements and proceeds to designing a complete network taking into account the technology and standards of ISDN as well as some constraints including cost which may be imposed Planning and Architectural Design of Integrated Services Digital Networks describes computer aided design tools employed for dimensioning the network for various traffic loads and for assessing its traffic carrying performance for assessing different precedence categories and network configurations transmission conditions and routing algorithms which may be static deterministic or dynamic adaptive Aspects such as surveillance and control security survivability and EMP protection are also addressed Planning and Architectural Design of Integrated Services Digital Networks Civil and Military Applications is an excellent reference source and may be used as a text for advanced courses on the subject
