Freeman,2011-03-23 This monograph first presents a method of diagramming argument macrostructure synthesizing the standard circle and arrow approach with the Toulmin model A theoretical justification of this method through a dialectical understanding of argument a critical examination of Toulmin on warrants a thorough discussion of the linked convergent distinction and an account of the proper reconstruction of enthymemes follows **Arguments about Arguments** Maurice A. Finocchiaro,2005-07-25 This book brings together essays by one of the pre eminent scholars of informal logic Science, Method, and Argument in Galileo Maurice A. Finocchiaro,2021-08-28 This book collects a renowned scholar s essays from the past five decades and reflects two main concerns an approach to logic that stresses argumentation reasoning and critical thinking and that is informal empirical naturalistic practical applied concrete and historical and an interest in Galileo s life and thought his scientific achievements Inquisition trial and methodological lessons in light of his iconic status as father of modern science These republished essays include many hard to find articles out of print works and chapters which are not available online The collection provides an excellent resource of the author s lifelong dedication to the subject Thus the book contains critical analyses of some key Galilean arguments about the laws of falling bodies and the Copernican hypothesis of the earth s motion There is also a group of chapters in which Galileo s argumentation is compared and contrasted with that of other figures such as Socrates Karl Marx Giordano Bruno and his musicologist father Vincenzo Galilei The chapters on Galileo s trial illustrate an approach to the science vs religion issue which Finocchiaro labels para clerical and conceptualizes in terms of a judicious consideration of arguments for and against Galileo and the Church Other essays examine argumentation about Galileo s life and thought by the major Galilean scholars of recent decades The book will be of interest to scholars in philosophy logic philosophy of science history of science history of religion philosophy of religion argumentation rhetoric and communication studies *Dialectics and the Macrostructure of Arguments* James B. Freeman,2011-09-20 No detailed description available for *Dialectics and the Macrostructure of Arguments* **Manifest Rationality** Ralph H. Johnson,2012-11-12 This book works through some of the theoretical issues that have been accumulating in informal logic over the past 20 years At the same time it defines a core position in the theory of argument in which those issues can be further explored The underlying concern that motivates this work is the health of practice of argumentation as an important cultural artifact A further concern is for logic as a discipline Argumentative and dialectical in nature this book presupposes some awareness of the theory of argument in recent history and some familiarity with the positions that have been advanced It will be of interest to academics researchers and advanced undergraduate and graduate students in the disciplines of logic rhetoric linguistics speech communication English composition and psychology Fundamentals of Argumentation Theory Frans H. van Eemeren,Rob Grootendorst,Ralph H. Johnson,Christian Plantin,Charles A. Willard,2013-11-05 Argumentation theory is a distinctly multidisciplinary field of inquiry It draws its data assumptions and methods from disciplines as disparate as formal logic and discourse analysis linguistics and forensic science

philosophy and psychology political science and education sociology and law and rhetoric and artificial intelligence This presents the growing group of interested scholars and students with a problem of access since it is even for those active in the field not common to have acquired a familiarity with relevant aspects of each discipline that enters into this multidisciplinary matrix This book offers its readers a unique comprehensive survey of the various theoretical contributions which have been made to the study of argumentation It discusses the historical works that provide the background to the field and all major approaches and trends in contemporary research Argument has been the subject of systematic inquiry for twenty five hundred years It has been graced with theories such as formal logic or the legal theory of evidence that have acquired a more or less settled provenance with regard to specific issues But there has been nothing to date that qualifies as a unified general theory of argumentation in all its richness and complexity This being so the argumentation theorist must have access to materials and methods that lie beyond his or her home subject It is precisely on this account that this volume is offered to all the constituent research communities and their students Apart from the historical sections each chapter provides an economical introduction to the problems and methods that characterize a given part of the contemporary research program Because the chapters are self contained they can be consulted in the order of a reader s interests or research requirements But there is value in reading the work in its entirety Jointly authored by the very people whose research has done much to define the current state of argumentation theory and to point the way toward more general and unified future treatments this book is an impressively authoritative contribution to the field
