Mental Files in Perspective Josef Perner, 2025-07-25 Intellectual development is primarily considered a domain specific enterprise Children develop naive physics a folk psychology theory of mind a naive biology etc But understanding perspective is a general overarching phenomenon that cuts across such domains in development and in the brain This has important theoretical consequences For instance our folk psychology cannot consist of a uniform theory of mind for explaining behaviour Parts of the theory that are sensitive to perspective differences have to be separated from those that are not A central concern is how perspective is represented in the mind The answer comes from mental files theory A mental file represents or refers to an object It presents the object under a particular mode of presentation perspective Coreferential files refer to the same object and present the object under different perspectives Files thus give us a concrete way to capture perspectives with the tools for basic object cognition This book introduces mental files theory in relation to object files and discourse referents and then applies it to the development of perspective taking in early childhood and to brain imaging The theory goes well beyond perspective it is the theoretical tool for representing persisting objects tracking them over time and

storing knowledge about them From a leading figure in developmental psychology this book addresses a topic much neglected in the cognitive sciences The Context and Content series is a forum for outstanding original research at the intersection of philosophy linguistics and cognitive science The general editor is Fran ois Recanati Institut Jean Nicod Paris

The Fragmented Mind Cristina Borgoni,Dirk Kindermann,Andrea Onofri,2021 The thesis of mental fragmentation has recently attracted increased attention as a way of explaining facts about mind and language This volume provides an accessible introduction and essays on foundations and applications of fragmentation *Imitation in Human and Animal Behavior* Wanda Wyrwicka,2018-01-16 Imitation is an often observed form of behavior that is beginning to attract widespread attention on the part of a variety of researchers Imitative acts of newborn babies and development of imitation skills in later life have been discussed in a variety of scientific studies but the large amount of observational and experimental data has been widely dispersed There is a need for a synthetic study in which the results of this research can be analyzed and the neural mechanisms of imitation can be explored and established Imitation in Human and Animal Behavior fulfills this need This book presents an overview of a number of studies on imitative behavior of humans and animals concentrating on selected cases of imitative behavior The early chapters discuss the results of studies on humans from ages of about one hour to three years of age and older It has been shown for example that newborn babies under one hour old are already able to imitate simple facial gestures There is a chapter devoted to the role of imitation in the cognitive development of children and adolescents describing also the use of imitation as a method in the therapy of phobias Finally there is a section that concentrates on imitation related to the tragic social problem of suicide among adolescents and adults including up to date statistical and clinical data The second half of the book focuses on the data obtained in studies on feeding among animals including examples of interspecies imitation Newly hatched chicks for instance imitate their mother in selection of grain color this is also true when the mother is replaced with an arrow shaped object resembling a pecking beak Included are observations on learning by imitation in rats cats and monkeys offering some data related to learning by following the leader The book also describes cases of inhibition of imitation in both humans and animals including a clinical case in which imitative behavior was disrupted after surgery on prefrontal lobes of the brain Imitation in Human and Animal Behavior is solidly rooted in observational and experimental data discussing the possible neural mechanisms underlying imitative behavior A hypothetical brain mechanism responsible for imitative behavior is proposed Imitation in Human and Animal Behavior will be fascinating and enlightening reading for psychologists neuroscientists pediatricians as well as nonprofessionals interested in behavior and development *Soul Healing with Our Animal Companions* Tammy Billups,2018-04-10 A guide to understanding the profound connection in animal human relationships and its potential for mutual healing 2020 Coalition of Visionary Resources Gold Award Explains the unspoken connection between people and their animal companions and how they share the same energetic patterns and emotional wounds Outlines specific behavioral

traits and physical issues that animals may exhibit as they mirror their caregiver's emotional state of being. Explores holistic modalities humans can employ such as energy therapy to promote healing in animals and ultimately themselves. The animals we attract in our lives reflect us in many ways. Our connections with them run deeply down to the soul level. Just like us, they are also on a journey to evolve their soul through their relationships and experiences, and each has deeply spiritual messages for us and intentions for our personal growth. In this book, Tammy Billups invites you to explore and deepen this profound relationship, showing how you can co-evolve along with your animal companions, experience unconditional love, and ultimately enact healing for both animal and caregiver. Offering a soulful and bioenergetic perspective on decoding our animals' actions, behaviors, and physical issues, Billups explains how our animal companions share our energetic patterns and emotional wounds, revealing issues in our own lives that may be hidden or suppressed. She identifies the five core emotional wounds in animals and the ways in which they manifest, outlining specific behavioral traits and physical issues animals may exhibit as they mirror our emotional states. She explains how to connect with them on a profound level so we can grasp their needs more clearly and learn what they have to teach us. She also provides guidance to help your animals heal the emotional wounds and traumas that create their anxiety, stress, behaviors, aggression, and fears. The author details a three-step process to help you through decisions you will make on your pets' behalf and explains how, when a person works on healing a core emotional issue in their life, abandonment, for example, it helps the animal release this same issue and the corresponding negative behaviors as well. She also shows how extremely receptive animals are to energy work, holistic healing, and spiritual practices, explaining how these methods unlock emotional barriers and enable both person and animal to heal and reach their highest potential in conscious evolution. Providing tools to identify our animals' messages more quickly, the author shows how our pets' higher purpose is to help people understand themselves.

Perception Dennis Proffitt, Drake Baer, 2020-07-28. A groundbreaking popular psychology book that explores the deep connection between our body and our brain. Over decades of study, University of Virginia psychologist Dennis Proffitt has shown that we are each living our own personal version of Gulliver's Travels, where the size and shape of the things we see are scaled to the size of our bodies and our ability to interact with them. Stairs look less steep as dieters lose weight, baseballs grow bigger the better players hit, hills look less daunting if you're standing next to a close friend, and learning happens faster when you can talk with your hands. Written with journalist Drake Baer, *Perception* marries academic rigor with mainstream accessibility. The research presented and the personalities profiled will show what it means to not only have but be your unique human body. The positive ramifications of viewing ourselves from this embodied perspective include greater athletic, academic, and professional achievement, more nourishing relationships, and greater personal well-being. The better we can understand what our bodies are, what they excel at, what they need, what they must avoid, the better we can live our lives.

Four Kittens in the Bathroom DL Sevic, 2019-08-23. *Four Kittens in the Bathroom* is a story about a feral cat that came to our backyard for a free meal and stayed to have three

litters of kittens The little calico cat we named Mama proved to be a great mother very loving and caring Her first litter had three kittens that spent the nights in our neighbor s garage and during the day they came into our yard to eat and play We enjoyed the many hours that summer watching them run and play Mama and her kittens were still feral cats and we could not get closer than ten feet and they would run away When Mama had a second litter we realized we had never given any thought about having more kittens to deal with There was only one kitten in this litter but it made us aware of the possibilities We did not know the gender of any of Mama s kittens and if they were all females things could multiply fast It did not take long before our fears were realized

Learning, Teaching and Education Research in the 21st Century Joanna Swann, 2011-12-15 Learning Teaching and Education Research in the 21st Century draws on Karl Popper s evolutionary epistemology and challenges widespread assumptions about learning teaching and research that are embedded in the practices of many teachers and in the design of most education institutions worldwide Joanna Swann argues that to promote the growth of learning we need to encourage children and adolescents to exercise and develop creativity and criticality and that we need to provide and maintain environments in which they can safely engage in self initiated and self directed exploratory activity In accessible and engaging language the author presents philosophical arguments that support the defence and development of non authoritarian approaches to learning and teaching that can be used by individuals and groups working in or outside state funded schools In particular she provides tried and tested guidelines for student initiated curricula and a problem based methodology for professional development and action research
