Green Chemistry Strategies for Drug Discovery Emily A. Peterson, Julie B. Manley, 2015-06-30 The incorporation of Green Chemistry is a relatively new phenomenon in the drug discovery discipline since the scale that chemists operate on in drug discovery is smaller than those of process and manufacturing chemistry The

necessary metrics are more difficult to obtain in drug discovery due to the diversity of reactions conducted. However, pharmaceutical companies are realizing that incorporation of green chemistry techniques at earlier stages of drug development can speed the development of a drug candidate. Edited by experts who have pioneered green chemistry efforts within their own institutions, this book provides a practical guide for both academic and industrial labs wanting to know where to start with introducing greener approaches for greatest return on investment. The Editors have taken a comprehensive approach to the topic, covering the entire drug discovery process from molecule conception through synthesis, formulation, and toxicology, with specific examples and case studies where green chemistry strategies have been implemented. Currently employed as well as emerging techniques for performing greener drug discovery chemistry are addressed, as well as cutting edge topics like biologics discovery. Moreover, important surrounding issues such as intellectual property are included. This book will serve as a practical guide for both academic and industrial chemists who work across the breadth of the drug discovery discipline. Ultimately, readers will learn how to incorporate green chemistry strategies into their everyday workflow without slowing down their science.

Worldwide Trends in Green Chemistry Education Vânia Zuin, Liliana Mammino, 2015-06-01

Educating the next generation of chemists about green chemistry issues such as waste minimisation and clean synthesis is vital for environmental sustainability. This book enables green issues to be taught from the underlying principles of all chemistry courses rather than in isolation. Chapters contributed by green chemistry experts from across the globe with experience in teaching at different academic levels provide a coherent overview of possible approaches to incorporate green chemistry into existing curriculums. Split into three sections, the book first introduces sustainability and green chemistry education before focussing on high school green chemistry education, initiatives and green chemistry education at undergraduate and post graduate levels. Useful laboratory experiments and in class activities to aid teaching are included. This book is a valuable resource for chemical educators worldwide who wish to integrate green chemistry into chemical education in a systematic and holistic way. It is also of interest to anyone wanting to learn more about the different approaches adopted around the world in sustainability education.
