Textures A Photographic Album For Artists And Designers:

Textures: a Photographic Album for Artists and Designers Phil Brodatz, 1966 *Classification and Information Processing at the Turn of the Millennium* Reinhold Decker, Wolfgang Gaul, 2000-08-01 This volume contains revised versions of selected papers presented during the 23rd Annual Conference of the German Classification Society GfKl Gesellschaft für Klassifikation. The conference took place at the University of Bielefeld, Germany, in March 1999 under the title Classification and Information Processing at the Turn of the Millennium. Researchers and practitioners interested in data analysis, classification, and information processing in the broad sense, including computer science, multimedia, WWW, knowledge discovery, and data mining, as well as special application areas such as, in alphabetical order, biology, finance, genome analysis, marketing, medicine, public health, and text analysis, had the opportunity to discuss recent developments and to establish cross-disciplinary cooperation in their fields of interest. Additionally, software and book presentations, as well as several tutorial courses, were organized. The scientific program of the conference included 18 plenary or semi-plenary lectures and more than 100 presentations in special sections. The peer-reviewed papers are presented in 5 chapters as follows: Data Analysis and Classification, Computer Science, Computational Statistics and Data Mining, Management Science, Marketing and Finance, Biology, Genome Analysis, and Medicine, Text Analysis, and Information Retrieval. As an unambiguous assignment of results to single chapters is sometimes difficult, papers are grouped in a way that the editors found appropriate. Principles of Visual Information Retrieval Michael S. Lew, 2013-03-14 *Principles of Visual Information Retrieval* introduces the basic concepts and techniques in VIR and develops a foundation that can be used for further research and study. Divided into 2 parts, the first part describes the fundamental principles. A chapter is devoted to each of the main features of VIR, such as colour, texture, and shape-based search. There is coverage of search techniques for time-based image sequences or videos and an overview of how to combine all the basic features described and integrate context into the search process. The second part looks at advanced topics such as multimedia query specification, visual learning, and semantics, and offers state-of-the-art coverage that is not available in any other book on the market. This book will be essential reading for researchers in VIR and for final year undergraduate and postgraduate students on courses such as Multimedia Information Retrieval, Multimedia Databases, Computer Vision, and Pattern Recognition. Computer Vision - ACCV 2006 P.J. Narayanan, Shree K. Nayar, Heung-Yeung Shum, 2006-01-14 These volumes present together a total of 64 revised full papers and 128 revised posters. The papers are organized in topical sections on camera calibration, stereo, and pose; texture; face recognition; variational methods; tracking; geometry and calibration; lighting and focus. In the first volume, the papers of the second volume cover topics as detection and applications; statistics and kernels; segmentation; geometry and statistics; signal processing; and video processing. *Image Databases* Vittorio Castelli, Lawrence D. Bergman, 2004-03-24 The explosive growth of multimedia data transmission has generated a critical need for efficient high-capacity image databases, as well as powerful

search engines to retrieve image data from them This book brings together contributions by an international all star team of innovators in the field who share their insights into all key aspects of image database and search engine construction Readers get in depth discussions of the entire range of crucial image database architecture indexing and retrieval transmission display and user interface issues And using examples from an array of disciplines the authors present cutting edge applications in medical imagery multimedia communications earth science remote sensing and other major application areas
