

Snakes

Snakes are reptiles and carnivores. They are cold-blooded. This means their body temperature changes depending on their environment.

Where do they live?

Snakes live in all kinds of places. They can be found in deserts, rainforests, mountains and even in the sea. No snakes live in Antarctica.

What do they eat?

Almost all snakes swallow their prey whole. They have flexible jaws and can open their mouths very wide. Different species of snake eat different things. Snakes can eat mammals, birds, eggs, snails, fish and even other snakes.

How do they catch prey?

Some snakes use venom to poison their prey by biting them. Other snakes use constriction. This means they squeeze their prey until it stops breathing.

What do they look like?

- Snakes have long, thin bodies with no legs or arms.
- Most snakes have sharp teeth. Some species have large fangs.
- Their bodies are covered in scales.
- There are over 3000 different species of snake. They come in many colours and sizes.
- Snakes do not have eyelids.
- They have forked tongues.

Did you know...?

Some species can make hissing noises but snakes are usually quite silent.
