Networks and Chaos - Statistical and Probabilistic Aspects J L Jensen, Wilfrid S. Kendall, 1993-07-22 This volume consists of a collection of tutorial papers by leading experts on statistical and probabilistic aspects of chaos and networks in particular neural networks While written for the non expert they are intended to bring the reader up to the forefront of knowledge and research in the subject areas concerned The papers which contain extensive references to the literature can separately or in various combinations serve as bases for short or full length courses at graduate or more advanced levels The papers are directed not only to mathematical statisticians but also to students and researchers in related fields of biology engineering geology physics and probability Data Mining With Decision Trees: Theory And Applications (2nd Edition) Oded Z Maimon, Lior Rokach, 2014-09-03 Decision trees have become one of the most powerful and popular approaches in knowledge discovery and data mining it is the science of exploring large and complex bodies of data in order to discover useful patterns Decision tree learning continues to evolve over time Existing methods are constantly being improved and new methods introduced This 2nd Edition is dedicated entirely to the field of decision trees in data mining to cover all aspects of this important technique as well as improved or new methods and techniques developed after the publication of our first edition In this new edition all chapters have been revised and new topics brought in New topics include Cost Sensitive Active

Learning Learning with Uncertain and Imbalanced Data Using Decision Trees beyond Classification Tasks Privacy Preserving Decision Tree Learning Lessons Learned from Comparative Studies and Learning Decision Trees for Big Data A walk through guide to existing open source data mining software is also included in this edition This book invites readers to explore the many benefits in data mining that decision trees offer Decomposition Methodology For Knowledge Discovery And Data Mining: Theory And Applications Oded Z Maimon, Lior Rokach, 2005-05-30 Data Mining is the science and technology of exploring data in order to discover previously unknown patterns It is a part of the overall process of Knowledge Discovery in Databases KDD The accessibility and abundance of information today makes data mining a matter of considerable importance and necessity This book provides an introduction to the field with an emphasis on advanced decomposition methods in general data mining tasks and for classification tasks in particular The book presents a complete methodology for decomposing classification problems into smaller and more manageable sub problems that are solvable by using existing tools The various elements are then joined together to solve the initial problem The benefits of decomposition methodology in data mining include increased performance classification accuracy conceptual simplification of the problem enhanced feasibility for huge databases clearer and more comprehensible results reduced runtime by solving smaller problems and by using parallel distributed computation and the opportunity of using different techniques for individual sub problems

Multivariate Statistics Hemant Ishwaran, 2025-03-31 This book explores multivariate statistics from both traditional and modern perspectives The first section covers core topics like multivariate normality MANOVA discrimination PCA and canonical correlation analysis The second section includes modern concepts such as gradient boosting random forests variable importance and causal inference A key theme is leveraging classical multivariate statistics to explain advanced topics and prepare for contemporary methods For example linear models provide a foundation for understanding regularization with AIC and BIC leading to a deeper analysis of regularization through generalization error and the VC theorem Discriminant analysis introduces the weighted Bayes rule which leads into modern classification techniques for class imbalanced machine learning problems Steepest descent serves as a precursor to matching pursuit and gradient boosting Axis aligned trees like CART a classical tool set the stage for more recent methods like super greedy trees Another central theme is training error Introductory courses often caution that reducing training error too aggressively can lead to overfitting At the same time training error also referred to as empirical risk is a foundational concept in statistical learning theory In regression training error corresponds to the residual sum of squares and minimizing it results in the least squares solution which can lead to overfitting Regardless of this concern empirical risk plays a pivotal role in evaluating the potential for effective learning The principle of empirical risk minimization demonstrates that minimizing training error can be advantageous when paired with regularization This idea is further examined through techniques such as penalization matching pursuit gradient boosting and super greedy tree constructions Key Features Covers both classical and

contemporary multivariate statistics Each chapter includes a carefully selected set of exercises that vary in degree of difficulty and are both applied and theoretical The book can also serve as a reference for researchers due to the diverse topics covered including new material on super greedy trees rule based variable selection and machine learning for causal inference Extensive treatment on trees that provides a comprehensive and unified approach to understanding trees in terms of partitions and empirical risk minimization New content on random forests including random forest quantile classifiers for class imbalanced problems multivariate random forests subsampling for confidence regions super greedy forests An entire chapter is dedicated to random survival forests featuring new material on random hazard forests extending survival forests to time varying covariates

Neural Fuzzy Control Systems With Structure And Parameter Learning Chin-teng Lin,1994-02-08 A general neural network based connectionist model called Fuzzy Neural Network FNN is proposed in this book for the realization of a fuzzy logic control and decision system The FNN is a feedforward multi layered network which integrates the basic elements and functions of a traditional fuzzy logic controller into a connectionist structure which has distributed learning abilities In order to set up this proposed FNN the author recommends two complementary structure parameter learning algorithms a two phase hybrid learning algorithm and an on line supervised structure parameter learning algorithm Both of these learning algorithms require exact supervised training data for learning In some real time applications exact training data may be expensive or even impossible to get To solve this reinforcement learning problem for real world applications a Reinforcement Fuzzy Neural Network RFNN is further proposed Computer simulation examples are presented to illustrate the performance and applicability of the proposed FNN RFNN and their associated learning algorithms for various applications
