Compendium of Practical Astronomy Günter D. Roth, 2012-12-06 It is a pleasure to present this work which has been well received in German speaking countries through four editions to the English speaking reader We feel that this is a unique publication in that it contains valuable material that cannot easily if at all be found elsewhere We are grateful to the authors for reading through the English version of the text and for responding promptly for the most part to our queries Several authors have supplied us on their own initiative or at our suggestion with revised and updated manuscripts and with supplementary English references We have striven to achieve a translation of Handbuch for Sternfreunde which accurately presents the qualitative and quantitative scientific principles contained within each chapter while maintaining the flavor of the original German text Where appropriate we have inserted footnotes to clarify material which may have a different meaning and or application in English speaking countries from that in Germany When the first English edition of this work *Astronomy A Handbook* translated by the late A Beer appeared in 1975 it contained 21 chapters This new edition is over twice the length and contains 28 authored chapters in three volumes At Springer's request we have devised a new title *Compendium of Practical Astronomy* to more accurately reflect the broad spectrum of topics and the vast body of information contained within these pages **Unveiling the Universe** J.E. van Zyl, 2012-12-06 Many books on general astronomy have been published in recent years but this one is exceptional in several respects It not only provides the complete newcomer to astronomy with a broad picture covering all aspects historical observational space research methods cosmology but it also presents enough more advanced material to enable the really interested student to take matters further Astronomy is essentially a mathematical science but there are many people who are anxious to take more than a passing interest and yet are not equipped to deal with mathematical formulae In this book therefore the mathematical sections are deliberately separated out so that they can be passed over without destroying the general picture The result is that the book will be equally useful to beginners to more advanced readers and to those who really want to go deeply into the subject for instance

at university level The whole text is written with admirable clarity and there are excellent illustrations together with extensive appendices which give lists of objects of various types together with more detailed mathematical explanations All in all the book may be said to bridge the gap between purely popular works and more advanced treatises as such it deserves a very wide circulation and it will undoubtedly run to many future editions **The History of Astronomy** Richard Pearson,

Mobberley,2015-03-20 The result of an exhaustive study of Sir Patrick Moore s observations of the Moon and planets for more than 60 years this book is a fantastic companion to the extremely popular It Came From Outer Space Wearing an RAF Blazer written by the same author Moore recorded his telescopic observations in his logbooks which are reproduced and described here in detail along with his sketches and notes In this light the author discusses the factors that caused Moore to switch from lunar observing to planetary and variable star observing He has also included personal recollections and humorous anecdotes from Moore s friends and acquaintances as well as a look at his best loved books Further chapters describe Moore s foreign travels and correspondence with those back home Lastly the author has not neglected a few of Moore s most memorable television and radio appearances which are examined along with a close up of what it was like to visit Moore s beloved home of Farthings in Selsey Essentially this is a book written by popular demand from the readers of the author s original biography who craved more of Moore **John Tebbutt** Wayne Orchiston,2016-11-15 This book marks

the centennial of Tebbutt s death with a major biographical account surveying his scientific contributions to astronomy prefaced with a foreword by Sir Patrick Moore During the second half of the nineteenth century Tebbutt was Australia s foremost astronomer He devoted his time and funds to astronomy and built a truly international reputation that far surpassed Australia s leading professional astronomers of the day This book marks the centennial of Tebbutt s death with a major biographical account Tebbutt s remarkable record of achievement extends over more than half a century Orchiston s book covers the whole of Tebbutt s career from his yearly observatory reports and comet discoveries to his time as the first president of Sydney s branch of the British Astronomical Association It's Part of What We Are - Volumes 1 and 2 - Volume 1: Richard Boyle (1566-1643) to John Tyndall (1820-1893); Volume 2: Samuel Haughton (18210-1897) to John Stewart Bell (1928-1990) Charles Mollan,2007-11-15 Biographies of more than 100 Irish scientists or those with strong Irish connections

in the disciplines of Chemistry and Physics including Astronomy Mathematics etc describing them in their Irish and international scientific social educational and political context Written in an attractive informal style for the hypothetical educated layman who does not need to have studied science Well received in Irish and international reviews The Astronomy of the Bible Edward Walter Maunder,1909 **Monthly Notices of the Royal Astronomical Society** Royal Astronomical Society,1911 Portfolio of 8 charts accompanies v 83 *The Star of Bethlehem* Mark Kidger,2017-03-14 Two thousand years ago according to the Bible a star rose low in the east and stopped high above Bethlehem Was it a miracle a sign from God to herald the birth of Christ Was there a star at all or was it simply added to the Bible to fulfill the Old Testament prophecy concerning the birth of the Messiah Or was the Star of Bethlehem an actual astronomical event For hundreds of years astronomers as prominent as Johannes Kepler have sought an answer to this last baffling question In *The Star of Bethlehem* Mark Kidger brings all the tools of modern science years of historical research and an infectious spirit of inquiry to bear on the mystery He sifts through an astonishing variety of ideas evidence and information including Babylonian sky charts medieval paintings data from space probes and even calculations about the speed of a camel to present a graceful original and scientifically compelling account of what it may have been that illuminated the night skies two millennia ago Kidger begins with the stories of early Christians comparing Matthew's tale of the Star and the three Magi who followed it to Bethlehem with lesser known accounts excluded from the Bible Crucially Kidger follows the latest biblical scholarship in placing Christ's birth between 7 and 5 B C which leads him to reject various phenomena that other scientists have proposed as the Star In clear colorful prose he then leads us through the arguments for and against the remaining astronomical candidates Could the Star have been Venus What about a meteor or a rare type of meteor shower Could it have been Halley's Comet as featured in Giotto's famous painting of the Nativity Or as Kidger suspects was the Star a combination of events a nova recorded in ancient Chinese and Korean manuscripts preceded by a series of other events including an unusual triple conjunction of planets Originally published in 1999 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905 THE CREATOCRACY REPUBLIC High King Peter K. Astronomy and Astrophysics Monthly Index ,1989 The Moon that Wasn't Helge Kragh,2008-11-06 The planet Venus is the closest neighbour to the Earth and in several respects similar to our globe It revolves around the Sun at an average distance of 0.72 astronomical units in an elliptical orbit of eccentricity 0.007 The corresponding 3 numbers for the Earth are 1 and 0.017 The mean density of Venus is 5.2 g cm⁻³ that of the Earth 5.5 g cm⁻³ Venus acceleration of gravity at its equator is 8.922 m s⁻² compared with 9.8 m s⁻² at the Earth The escape velocity is 10.4 km s⁻¹ while the corresponding gure of the Earth is 11.2 km s⁻¹ Although the mass of Venus is somewhat smaller than that of the Earth the ratio is $M_V/M_E = 0.815$ the diameters of the two planets are almost the same In other words Venus is indeed a sister planet of the Earth In earlier times when almost nothing was known about the physical con tions of Venus the similarity appeared even stronger than today Not only was Venus period of rotation thought to be close to that of the Earth it wasalso p sible and indeed common to imagine intelligent life on Venus *Transactions of the Astronomical and Physical Society of Toronto* Royal Astronomical Society of Canada,1906
