Sixteen Dimensions Of The Population Problem Worldwatch Paper:

Beyond Malthus Lester Russell Brown, Gary T. Gardner, Brian Halweil, 1998 This study looks at 16 dimensions or effects of population growth in order to gain a better perspective on how future population trends are likely to affect the human prospect The evidence gathered here indicates that the rapid population growth prevailing in a majority of the world's countries is not going to continue much longer Either countries will get their act together shifting quickly to smaller families or death rates will rise from one or more stresses such as AIDS ethnic conflicts or water shortages The sixteen topics are grain production fresh water biodiversity climate change oceanic fish catch jobs cropland forests housing energy urbanization natural recreation areas education waste meat production and income Excerpt Fighting The Wrong Enemy Edward Graham, 2000-09-01 Antiglobalist forces have been gaining greater momentum in recent years in their efforts to reverse what they view as the negative effects of an integrating global economy Their influence was felt earlier when efforts to create a Multilateral Agreement on Investment MAI ended in failure in 1998 after France left the bargaining table at the Organization for Economic Cooperation and Development effectively killing the initiative In this book through an evaluation of the MAI itself and the issues raised by its opponents Edward M Graham takes a fresh look at the growing backlash against globalization He first explores whether the MAI negotiations failed due to political maneuvering by antiglobalist nongovernmental organizations supported by US organized labor or because of irreconcilable differences among the negotiating parties over the substance of the issue of foreign direct investment He then objectively and thoroughly assesses antiglobalist assertions that the activities of multinational firms have had negative effects on workers both in the home investor and host recipient nations with a special focus on developing nations An important finding is that multinational firms tend to pay workers in developing nations wages that are significantly above prevailing wages Graham then examines the issue of globalized economic activity and the environment finding that economic growth in developing nations can lead to increased environmental stress but also finding that foreign direct investment can lead to reductions in this stress He finds that the worry of many environmentalists of a race to the bottom is not borne out by the evidence The final chapters assess whether or not a negotiation to create a comprehensive agreement on investment should be included in a multilateral negotiating round at the World Trade Organization in the near future The interests of developing nations in this agenda are given special attention Graham indicates that while many developing nations would accept such rules it might nonetheless be premature to press for a comprehensive agreement at this time Rather a limited investment agenda might be both more feasible and more productive

Ecocide Franz Brosch, 2002-09-20 We live in an age of ecocide. Changes of enormous ecological significance are occurring on our planet: the ozone layer is beginning to disintegrate. Since 1970 the world's forests have almost halved. A quarter of the world's fish have been depleted. 70% of biologists believe the world is now in the midst of the fastest mass extinction of species in the planet's 4.5 billion year history. Biodiversity loss is rated as a more serious environmental problem than the depletion of the ozone layer, global warming, or pollution and contamination. How have we come to this, and what can be done to conserve our environment for the future? *Ecocide* examines the facts behind the figures to offer a disturbing account of the ecological impact that the human species has on the planet. It shows how we are wilfully destroying our world. Highlighting important countermovements who are working for ecological democracy, this unique book is essential for anyone who cares about conserving our environment for the future.

Limits to Growth Donella Meadows, Jorgen Randers, Dennis Meadows, 2004-06-01 A pioneering work of science Business Insider This book helped launch modern environmental computer modeling and began our current globally focused environmental debate a scientifically rigorous and credible warning The Nation In 1972 three scientists from MIT created a computer model that analyzed global resource consumption and production Their results shocked the world and created stirring conversation about global overshoot or resource use beyond the carrying capacity of the planet Now preeminent environmental scientists Donella Meadows Jorgen Randers and Dennis Meadows have teamed up again to update and expand their original findings in *The Limits to Growth The 30 Year Global Update* Meadows Randers and Meadows are international environmental leaders recognized for their groundbreaking research into early signs of wear on the planet Citing climate change as the most tangible example of our current overshoot the scientists now provide us with an updated scenario and a plan to reduce our needs to meet the carrying capacity of the planet Over the past three decades population growth and global warming have forged on with a striking semblance to the scenarios laid out by the World3 computer model in the original *Limits to Growth* While Meadows Randers and Meadows do not make a practice of predicting future environmental degradation they offer an analysis of present and future trends in resource use and assess a variety of possible outcomes In many ways the message contained in *Limits to Growth The 30 Year Update* is a warning Overshoot cannot be sustained without collapse But as the authors are careful to point out there is reason to believe that humanity can still reverse some of its damage to Earth if it takes appropriate measures to reduce inefficiency and waste Written in refreshingly accessible prose *Limits to Growth The 30 Year Update* is a long anticipated revival of some of the original voices in the growing chorus of sustainability *Limits to Growth The 30 Year Update* is a work of stunning intelligence that will expose for humanity the hazy but critical line between human growth and human development
