An Introduction to Scientific Research Methods in Geography and Environmental Studies Daniel Montello, Paul Sutton, 2012-12-10. Covers a broad range of subjects that undergraduates in the discipline should be familiar and comfortable with upon graduation. From chapters on the scientific method and fundamental research concepts to experimental design sampling and statistical analysis the text offers an excellent introduction to the key concepts of geographical research. The content is applicable for students at the beginning of their studies right through to planning and conducting dissertations. The book has also been of particular support in designing my level 1 and 2 tutorials which cover similar ground to several of the chapters. Joseph Mallalieu School of Geography Leeds University. Montello and Sutton is one of the best texts I've used in seminars on research methodology. The text offers a clear balance of quantitative vs qualitative and physical vs human which I've found particularly valuable. The chapters on research ethics scientific communication information technologies and data visualization are excellent. Kenneth E Foote Department of Geography University of Colorado at Boulder. Recalibrating the Quantitative Revolution in Geography Ferenc Gyuris, Boris Michel, Katharina Paulus, 2022-05-17 This book brings together international research on the quantitative revolution in geography. It offers perspectives from a wide range of contexts and national traditions that decenter the Anglo-centric discussions. The mid 20th century quantitative revolution is frequently regarded as a decisive moment in the history of geography, transforming it into a modern and applied spatial science. This book highlights the different temporalities and spatialities of local geographies, laying the ground for a global history of a specific mode of geographical thought. It contributes to the contemporary discussions around the geographies and mobilities of knowledge, notions of worlding, linguistic privilege, decolonizing, and internationalizing of geographic knowledge. This book will be of interest to researchers, postgraduates, and advanced students in geography and those interested in the spatial sciences.

Uncertainty and Context in GIScience and Geography Yongwan Chun, Mei-Po Kwan, Daniel A. Griffith, 2021-05-13 Uncertainty and context pose fundamental challenges in GIScience and geographic research. Geospatial data are imbued with errors, e.g., measurement and sampling, and various types of uncertainty that often obfuscate any understanding of the effects of contextual or environmental influences on human behaviors and experiences. These errors or uncertainties include those attributable to geospatial data measurement, model specifications, delineations of geographic context in space and time, and the use of different spatiotemporal scales and zonal schemes when analyzing the effects of environmental influences on human behaviors or experiences. In addition, emerging sources of geospatial big data, including smartphone data (data collected by GPS and various types of wearable sensors, e.g., accelerometers and air pollutant monitors), volunteered geographic information, and/or location-based social media data (i.e., crowd-sourced geographic information), inevitably contain errors, and their quality cannot be fully controlled during their collection or production. *Uncertainty and Context in GIScience and Geography: Challenges in the Era of Geospatial Big Data* illustrates how cutting-edge research explores recent advances in this area and will serve as a useful point of departure for GIScientists to conceive new approaches and solutions for addressing these challenges in future research. The seven core chapters in this book highlight many challenges and opportunities in confronting various issues of uncertainty and context in GIScience and geography, tackling different topics and approaches. The chapters in this book were originally published as a special issue of the *International Journal of Geographical Information Science*.
