Agarwal,A. Vercelli,2005-08-03 Economics has paid little attention to the psychology of economic behaviour leading to somewhat simplistic assumptions about human nature The psychological aspects have typically been reduced to standard utility theory based on a narrow conception of rationality and self interest maximization The contributions in this volume some focused on

analytical models and methodology others on laboratory and field experiments challenge these assumptions and provide novel and complex understandings of human motivation and economic decision making With a pioneering introduction by the book's two editors this volume brings together exciting contributions to a field that is rapidly growing in influence and reach

Agent-Based Computational Modelling Francesco C. Billari, Thomas Fent, Alexia Prskawetz, Jürgen Scheffran, 2006-06-14 The present book describes the methodology to set up agent based models and to study emerging patterns in complex adaptive systems resulting from multi agent interaction. It offers the application of agent based models in demography, social and economic sciences and environmental sciences. Examples include population dynamics, evolution of social norms, communication structures, patterns in eco systems and socio biology, natural resource management, spread of diseases and development processes. It presents and combines different approaches how to implement agent based computational models and tools in an integrative manner that can be extended to other cases. *The Organization of Firms in a Global Economy* Elhanan Helpman, Dalia Marin, Thierry Verdier, 2008-11-30 The Organization of Firms in a Global Economy presents a new research program that is transforming the study of international trade. Driven by the availability of new micro data sets and innovative theoretical models, it focuses on the level of firms, products and stages of production rather than on countries and industries. It addresses such questions as why only a small proportion of firms in a given industry export and why an even smaller proportion invest abroad, why exporters tend to be more productive than nonexporters, why almost one third of international trade takes place between units of the same firm and why as much as two thirds involves multinational firms as exporter, importer or both and why international trade may have been the most important driver of organizational changes in the corporation that have been taking place in the last decade. Until a few years ago, models of international trade did not recognize the heterogeneity of firms and exporters and could not provide good explanations of international production networks. Now such models exist and are explored in this volume. **Financial Cryptography and Data Security** George Danezis, 2012-02-02 This book constitutes the thoroughly refereed post conference proceedings of the 15th International Conference on Financial Cryptography and Data Security FC 2011 held in Gros Islet, St Lucia in February-March 2011. The Social Cognitive Neuroscience of Organizations, Volume 1118 Carl Senior, Michael J. Butler, 2008-01-14 Social cognitive neuroscience is an emerging branch of cognitive neuroscience that bridges together social psychology and neuroscience At its core is an understanding of the relationship between the brain and social interaction The social cognitive neuroscientist places empirical endeavor within a three stage framework and questions falling under the SCN rubric undergo interrogation at each of these three levels Firstly we seek to understand a neuroscience of social interactions at the social level Here we need to understand the motivational and other social factors that drive our behavior and experience in the real world It goes without saying that any study of the cognitive neuroscience of socially interactive behavior must first be informed by social psychological theory to maintain ecological validity Second the social cognitive neuroscientist must be an adroit cognitive psychologist and be able to examine interactive behavior from the cognitive level It is here that information processing models and theories are applied to the understanding of our social behavior Finally studies at the neural level seek to inform us about the cortical structures as well as the way they interact with other in the mediation of the previous cognitive level This volume brings together contributions from leading thinkers in both the social cognitive neurosciences and business to provide a comprehensive introduction and overview of a social cognitive neuroscience of the business brain NOTE Annals volumes are available for sale as individual books or as a journal For information on institutional journal subscriptions please visit www.blackwellpublishing.com NYAS ACADEMY MEMBERS Please contact the New York Academy of Sciences directly to place your order www.nyas.org Members of the New York Academy of Science receive full text access to the Annals online and discounts on print volumes Please visit <http://www.nyas.org> MemberCenterJoin.aspx for more information about becoming a member
