Surveys in Combinatorics, 1991 A. D. Keedwell, 1991 Surveys in Combinatorics, 1991 A. D. Keedwell, Savilian Professor of Geometry N J Hitchin, 2014-05-18 This volume contains the invited papers presented at the British Combinatorial Conference held at the University of Surrey in July 1991 Surveys in Combinatorics ... British Combinatorial Conference, 1991 Surveys in combinatorics. Invited papers ; 1991 , 1991 **Corings and Comodules** Tomasz Brzezinski, Robert Wisbauer, 2003-09-15 This is the first extensive treatment of the theory of corings and their comodules In the first part the module theoretic aspects of coalgebras over commutative rings are described Corings are then defined as coalgebras over non commutative rings Topics covered include module theoretic aspects of corings such as the relation of comodules to special subcategories of the category of modules sigma type categories connections between corings and extensions of rings properties of new examples of corings associated to entwining structures generalisations of bialgebras such as bialgebroids and weak bialgebras and the appearance of corings in non commutative geometry **Invariant Potential Theory in the Unit Ball of C_n** Manfred Stoll, 1994-05-12 This monograph provides an introduction and a survey of recent results in potential theory with respect to the Laplace Beltrami operator D in several complex variables with special emphasis on the unit ball in C_n Topics covered include Poisson Szeg integrals on the ball the Green's function for D and the Riesz decomposition theorem for invariant subharmonic functions The extension to the ball of the classical Fatou theorem on non tangible limits of Poisson integrals and Littlewood's theorem on the existence of radial limits of subharmonic functions are covered in detail The monograph also contains recent results on admissible and tangential boundary limits of Green potentials and L_p inequalities for the invariant gradient of Green potentials Applications of some of the results to H_p spaces and weighted Bergman and Dirichlet spaces of invariant harmonic functions are included The notes are self contained and should be accessible to anyone with some basic knowledge of several complex variables **Rational Points on Curves Over Finite Fields** Harald Niederreiter, Chaoping Xing, 2001-06-14 Ever since the seminal work of Goppa on algebraic geometry codes rational points on algebraic curves over finite fields have been an important research topic for algebraic geometers and coding theorists The focus in this application of algebraic geometry to coding theory is on algebraic curves over finite fields with many rational points relative to the genus Recently the authors discovered another important application of such curves namely to the construction of low discrepancy sequences These sequences are needed for numerical methods in areas as diverse as computational physics and mathematical finance This has given additional impetus to the theory of and the search for algebraic curves over finite fields with many rational points This book aims to sum up the theoretical work on algebraic curves over finite fields with many rational points and to discuss the applications of such curves to algebraic coding theory and the construction of low discrepancy sequences **Singularities of Plane Curves** Eduardo Casas-Alvero, 2000-08-31 Comprehensive and self contained exposition of singularities of plane curves including new

previously unpublished results *Second Order Partial Differential Equations in Hilbert Spaces* Giuseppe Da Prato, Jerzy Zabczyk, 2002-07-25 Second order linear parabolic and elliptic equations arise frequently in mathematics and other disciplines For example parabolic equations are to be found in statistical mechanics and solid state theory their infinite dimensional counterparts are important in fluid mechanics mathematical finance and population biology whereas nonlinear parabolic equations arise in control theory Here the authors present a state of the art treatment of the subject from a new perspective The main tools used are probability measures in Hilbert and Banach spaces and stochastic evolution equations There is then a discussion of how the results in the book can be applied to control theory This area is developing very rapidly and there are numerous notes and references that point the reader to more specialised results not covered in the book Coverage of some essential background material will help make the book self contained and increase its appeal to those entering the subject **Quantum Groups and Lie Theory** Andrew Pressley, 2002-01-17 Since its genesis in the early 1980s the subject of quantum groups has grown rapidly By the late 1990s most of the foundational issues had been resolved and many of the outstanding problems clearly formulated To take stock and to discuss the most fruitful directions for future research many of the world's leading figures in this area met at the Durham Symposium on Quantum Groups in the summer of 1999 and this volume provides an excellent overview of the material presented there It includes important surveys of both cyclotomic Hecke algebras and the dynamical Yang Baxter equation Plus contributions which treat the construction and classification of quantum groups or the associated solutions of the quantum Yang Baxter equation The representation theory of quantum groups is discussed as is the function algebra approach to quantum groups and there is a new look at the origins of quantum groups in the theory of integrable systems *Foundations of Computational Mathematics* Ronald A. DeVore, Arieh Iserles, Endre Süli, 2001-05-17 Collection of papers by leading researchers in computational mathematics suitable for graduate students and researchers **Introduction to Möbius Differential Geometry** Udo Hertrich-Jeromin, 2003-08-14 This book introduces the reader to the geometry of surfaces and submanifolds in the conformal n sphere **Clifford Algebras and Spinors** Pertti Lounesto, 2001-05-03 In this book Professor Lounesto offers a unique introduction to Clifford algebras and spinors The initial chapters could be read by undergraduates vectors complex numbers and quaternions are introduced with an eye on Clifford algebras The next chapters will also interest physicists and include treatments of the quantum mechanics of the electron electromagnetism and special relativity with a flavour of Clifford algebras This book also gives the first comprehensive survey of recent research on Clifford algebras A new classification of spinors is introduced based on bilinear covariants of physical observables This reveals a new class of spinors residing between the Weyl Majorana and Dirac spinors Scalar products of spinors are classified by involutory anti automorphisms of Clifford algebras This leads to the chessboard of automorphism groups of scalar products of spinors On the analytic side Brauer Wall groups and Witt rings are discussed and Cauchy's integral formula is generalized to higher dimensions

Spectral Generalizations of Line Graphs Dragoš Cvetkovic, Peter Rowlinson, Slobodan Simic, 2004-07-22 Introduction Forbidden subgraphs Root systems Regular graphs Star complements The Maximal exceptional graphs Miscellaneous results

Topics in Dynamics and Ergodic Theory Sergey Bezuglyi, 2003-12-08 This book contains a collection of survey papers by leading researchers in ergodic theory low dimensional and topological dynamics and it comprises nine chapters on a range of important topics These include the role and usefulness of ultrafilters in ergodic theory topological dynamics and Ramsey theory topological aspects of kneading theory together with an analogous 2 dimensional theory called pruning the dynamics of Markov odometers Bratteli Vershik diagrams and orbit equivalence of non singular automorphisms geometric proofs of Mather's connecting and accelerating theorems recent results in one dimensional smooth dynamics periodic points of nonexpansive maps arithmetic dynamics the defect of factor maps entropy theory for actions of countable amenable groups

Introduction to Operator Space Theory Gilles Pisier, 2003-08-25 The theory of operator spaces is very recent and can be described as a non commutative Banach space theory An operator space is simply a Banach space with an embedding into the space $B(H)$ of all bounded operators on a Hilbert space H The first part of this book is an introduction with emphasis on examples that illustrate various aspects of the theory The second part is devoted to applications to C^* algebras with a systematic exposition of tensor products of C^* algebras The third and shorter part of the book describes applications to non self adjoint operator algebras and similarity problems In particular the author's counterexample to the Halmos problem is presented as well as work on the new concept of length of an operator algebra Graduate students and professional mathematicians interested in functional analysis operator algebras and theoretical physics will find that this book has much to offer

The Homotopy Category of Simply Connected 4-Manifolds Hans-Joachim Baues, 2003-04-03 The homotopy type of a closed simply connected 4 manifold is determined by the intersection form The homotopy classes of maps between two such manifolds however do not coincide with the algebraic morphisms between intersection forms Therefore the problem arises of computing the homotopy classes of maps algebraically and determining the law of composition for such maps This problem is solved in the book by introducing new algebraic models of a 4 manifold The book has been written to appeal to both established researchers in the field and graduate students interested in topology and algebra There are many references to the literature for those interested in further reading

Analysis and Logic C. Ward Henson, 2002 This volume comprises articles from four outstanding researchers who work at the cusp of analysis and logic The emphasis is on active research topics many results are presented that have not been published before and open problems are formulated Considerable effort has been made by the authors to integrate their articles and make them accessible to mathematicians new to the area

A Quantum Groups Primer Shahn Majid, 2002-04-04 This book provides a self contained introduction to quantum groups as algebraic objects Based on the author's lecture notes for the Part III pure mathematics course at Cambridge University it is suitable for use as a textbook for graduate courses in quantum groups or as supplement to modern

courses in advanced algebra The book assumes a background knowledge of basic algebra and linear algebra Some familiarity with semisimple Lie algebras would also be helpful The book is aimed as a primer for mathematicians but will also be useful for mathematical physicists

Aspects of Sobolev-Type Inequalities L. Saloff-Coste, 2002 Focusing on Poincaré Nash and other Sobolev type inequalities and their applications to the Laplace and heat diffusion equations on Riemannian manifolds this text is an advanced graduate book that will also suit researchers
